(1)

In July 1998, the Utility reached an agreement with the City and County of San Francisco regarding the Hunters Point fossil-fueled power plant, which the Independent System Operator (ISO) has designated as a "must run" facility. The agreement expresses the Utility's intention to retire the plant when it is no longer needed by the ISO.

(2)

Listed to show capability: subject to relocation within the system as required.

Pacific Gas and Electric Company's electric transmission system consists of approximately 18,648 circuit miles of interconnected transmission lines of 60 kilovolt (kV) to 500 kV and transmission substations having a capacity of approximately 7,091 megawatt amperes (mVA), including spares, excluding power plant interconnection facilities. Energy is distributed to customers through approximately 116,460 circuit miles of distribution system and distribution

substations having a capacity of approximately 24,894 mVA.

In 1998, Pacific Gas and Electric Company relinquished control, but not ownership, of its transmission facilities to the ISO. The operation of the transmission system in California, including facilities owned by Pacific Gas and Electric Company, is under the control of the ISO in connection with the electric industry restructuring.

Pacific Gas and Electric Company owns and operates an integrated gas transmission, storage, and distribution system in California. The Utility's system consisted of approximately 6,254 miles of transmission pipelines, three gas storage facilities, and approximately 38,410 miles of gas distribution lines.
