## Edgar Filing: NOVARTIS AG - Form 6-K

All product names appearing in italics are trademarks of Novartis Group Companies  
Unless otherwise stated, growth rates are in USD and comments refer to nine-month 2004 figures

*Nine-month sales rise 14% (+9% lc) to USD 20.7 billion, with Pharmaceuticals growing 16% (+11% lc) and Consumer Health advancing 10% (+5% lc)*

*Pharmaceuticals continues to achieve strong double-digit growth and market share gains in a slowing global healthcare market, driven by enhanced leadership positions in the cardiovascular and oncology franchises*

*Consumer Health sales up 10% in USD due mainly to double-digit growth in OTC and Medical Nutrition, offsetting lower sales growth in Sandoz generics business*

## Edgar Filing: NOVARTIS AG - Form 6-K

*Operating income advances faster than sales, rising 17% to USD 5.0 billion, owing to excellent business performance and effective resource allocation*

*Net income up 20% to USD 4.4 billion, while EPS advances 21% to USD 1.79 per share*

**Basel, October 21, 2004** Commenting on the nine-month results published today, Dr. Daniel Vasella, Chairman and CEO of Novartis, said, "I am pleased with our strong double-digit performance in the first nine months of 2004. The rapid growth pace was driven by Pharmaceuticals, which once more gained market share and improved operating profit margins. Novartis is on track to deliver new record results in 2004."

### Sales

#### Group sales up 14% to USD 20.7 billion

The 14% sales increase (+9% lc) in the first nine months of 2004 was due to strong results in both Pharmaceuticals as well as Consumer Health, where OTC and Medical Nutrition offset lower sales growth in the Sandoz generics business. Currency benefits added five percentage points in addition to seven percentage points from volumes, which was the main growth driver. Acquisitions and price increases each added one percentage point to sales growth.

#### Pharmaceuticals sales rise 16% to USD 13.5 billion

Pharmaceuticals realized double-digit sales growth for the first three quarters (+16%, +11% lc), with strong performances from key brands in both the primary care and specialty medicines portfolios, leading to growth ahead of the market in all key regions, particularly the US. Volumes contributed 10 percentage points, while currency benefits added five percentage points and price increases one percentage point.

Primary care product sales (including mature products) as a group were up 14% (+9% lc), due mainly to the expansion of the cardiovascular franchise (+21%, +17% lc), which was driven by the anti-hypertensive medicines *Diovan* and *Lotrel*. Other key growth contributors were *Lamisil*, *Trileptal*, *Zelnorm/Zelmac*, *Exelon* and *Elidel*.

Specialty medicines sales comprising our activities in Oncology, Transplantation & Immunology, and Ophthalmics were up 22% (+16% lc) and accounted for 33% of Pharmaceuticals sales versus 31% in the 2003 period. The oncology franchise reported a 27% (+21% lc) increase for the first nine months. The key oncology drugs *Gleevec/Glivec*, *Zometa* and *Femara* delivered dynamic growth as new data from study of these medicines continued to uncover new benefits for patients, contributing to the sales rise. Sales of the ophthalmics product *Visudyne* advanced 24% in USD.

Excellent sales growth in the US (+12%) was ahead of the country's prescription drugs market performance, while Japan (+18%, +9% lc) and Europe (+19%, +9%lc) achieved solid growth despite difficult market conditions. Novartis increased its share of the global healthcare market to 4.48% in the first eight months of the year, up from 4.40% in the year-ago period, according to IMS Health, which reported a 7% rise in worldwide pharmaceutical sales for the first eight months of 2004.

#### Consumer Health sales climb 10% to USD 7.1 billion

Nine-month sales rose 10% (+5% lc), due in particular to double-digit USD sales growth in OTC and Medical Nutrition. Key products in OTC delivered solid performances, such as *Lamisil* Topical (antifungal), *Maalox* (antacid) and *Gas-X* (anti-gas), while Medical Nutrition was boosted by the Mead Johnson acquisition, which added 26 percentage points to the 38% growth of Medical Nutrition. Sandoz suffered from comparative base effects after strong growth in 2003 due to the launch of the antibiotic *AmoxC* as well as from competitive pricing pressures, which resulted in growth of 2% in USD

and a decline of 3% in local currencies. An overall increase in Consumer Health volumes contributed two percentage points, currencies added five percentage points while prices added one percentage point and acquisitions two percentage points to sales growth.

### Management Changes

Andreas Rummelt, currently head of Global Technical Operations in Pharmaceuticals and a member of the Pharma Executive Committee, has been named the new head of Sandoz, reporting to Dr. Vasella effective November 1, 2004. Dr. Rummelt, who has been with Novartis since 1985, has successfully held several management positions in R&D. As worldwide head of technical operations for Pharmaceuticals he enhanced the focus on quality, productivity improvement and inventory management. He will be replaced by Thomas van Laar, currently head of US Pharmaceutical Operations.

### Operating income

<b>Total</b>	<b>1 717</b>	<b>24.3</b>	1 469	23.7	<b>17</b>

### Group operating income up 17% to USD 5.0 billion, rising faster than sales

Operating income growth for the first nine months exceeded sales growth and resulted in a margin improvement of 0.6 percentage points from 23.6% in the year-ago period to 24.2%. This expansion was based on improvements in Costs of Goods Sold (COGS), which only expanded 11%. In addition, Marketing & Sales investments came down 0.5 percentage points, mainly owing to improvements in Pharmaceuticals. Research & Development costs increased 12%, but declined as a percentage of sales to 14.4% from 14.7% in 2003 as fewer milestone payments were triggered in pharmaceutical development. General & Administrative expenses also increased at a lower pace than sales, rising 11% and making up 5.3% of sales. Charges contained in Other Income & Expenses increased by USD 242 million, mainly due to lower divestment and hedging gains, a goodwill impairment charge of USD 73 million in Sandoz and an inventory write-down of USD 18 million in Animal Health.

### **Pharmaceuticals operating income climbs 23% to USD 4.0 billion**

In Pharmaceuticals, operating income expanded significantly faster than sales, rising 23% in USD and resulting in a margin expansion of 1.7 percentage points to 29.6%. This was based on an improvement of 0.9 percentage points in COGS from 14.5% of sales to 13.6% due to productivity gains and improved product mix. Marketing & Sales costs fell 0.7 percentage points to 32.1% of sales due to increased field-force productivity. R&D expenses rose 13%, mainly due to investments in the Novartis Institutes for BioMedical Research, but declined in the 2004 period as a percentage of sales to 18.3% from 18.8% as fewer upfront development costs and milestone payments were triggered compared to the same period in 2003. Charges contained in Other Income & Expenses increased over the nine-month period by 39% as a result of lower hedging gains and lower income from divestments versus 2003 where the sale of the *Fiorinal* product range resulted in an income of USD 178 million, while General & Administrative costs expanded slower than sales. Operating expenses are expected to be significantly higher in the fourth quarter compared to the same period in 2003, particularly in Marketing & Sales and Research & Development, in part due to the start of major phase III clinical trials.

### **Consumer Health operating income up 1% to USD 997 million**

Operating income rose 1% as strong business expansion in OTC and CIBA Vision were offset by impairments at Sandoz of USD 73 million related to the generic pharmaceuticals business in Germany as well as a one-time inventory write-down of USD 18 million in Animal Health and one-time costs of USD 13 million associated with the Mead Johnson acquisition in Medical Nutrition. Taking into account the current competitive environment in the generics market, numerous improvement measures are being evaluated and will be reported in the fourth quarter, and additional impairments cannot be excluded.

### **Group net income up 20% to USD 4.4 billion**

Net income for the first nine months rose 20% to USD 4.4 billion due to the strong organic business expansion and sharply higher income from associated companies.

### **Group outlook (barring any unforeseen events)**

Novartis remains on track to deliver excellent sales and earnings growth for 2004, exceeding its initial expectations due to the strong overall business performance. The Group expects for the full year to deliver high-single-digit sales growth and in Pharmaceuticals high-single-digit to low-double-digit sales growth in local currencies.

Barring any unforeseen events, Novartis Group operating and net income are predicted for the full year 2004 to be markedly higher than last year.

### **Pharmaceutical business and key product highlights**

*(Note: All sales percentage figures refer to nine-month results)*

#### **Primary Care**

**Diovan** (+30%; +24% lc; +20% US) continued strong sales growth ahead of market in the US and worldwide. US market share gains led to an all-time market share high of 9% of the US anti-hypertension market and a market-leading 38.3% share of the fast-growing angiotensin receptor blocker (ARB) therapeutic category (as of September 2004). This therapeutic category has grown 18% to date in 2004 and is expected to be one of the dynamic pharmaceutical categories during the coming years. Sales growth has been driven by outcomes data from new mega-trials, the global rollout of higher dosages and the recent launch of the ongoing Novartis hypertension awareness program in the US.

**Lotrel** (+11% US), the leading US fixed combination treatment for hypertension, sustained double-digit sales growth well ahead of market (+6% YTD). Higher sales have been driven by an increased focus on lower blood pressure goals set by national guidelines and the large number (up to 70%) of people being treated for hypertension that have not reached their goal and require more effective therapies. **Lotrel**, which is only sold in the US, is also benefiting from the recent launch of the hypertension awareness program in the US.

**Lamisil** (+21%; +16% lc; +27% US), the leading treatment for fungal nail infections, extended its US market leadership position to a high of 66.3% (September 2004). Significant sales growth, particularly in the US, was driven by refreshed direct-to-consumer campaigns and increased educational programs raising disease awareness.

**Elidel** (+55%; +53% lc; US: +40%), the No. 1 branded prescription agent for eczema, outperformed the market in sales and market share growth (+58% *Elidel* vs. 8.6% IMS top 16 countries as of August 2004).

**Zelnorm/Zelmac** (+118%; +117% lc; US: +137%), a breakthrough therapy for irritable bowel syndrome (IBS) with constipation, has surpassed 3.5 million prescriptions worldwide, including 2.5 million in the US, since its launch in July 2002. Results of the ZENSAA study with 2,660 patients, the largest IBS trial ever conducted, showed the treatment to be highly effective as a repeat treatment for women and additionally demonstrated significant improvements in important quality-of-life measures.

## Specialty Medicines

### Oncology

**Gleevec/Glivec** (+47%; +38% lc; US: +24%), for all stages of Philadelphia-Chromosome positive chronic myeloid leukemia (CML) and certain forms of gastro-intestinal stromal tumors (GIST), increased its growth rates in the third quarter, particularly due to further penetration in the European CML market and an increase in the average daily dose. Results of the largest trial ever conducted in GIST, which were recently published in *The Lancet*, showed significantly longer progression-free survival for patients taking 800 mg daily compared to patients on the standard 400 mg daily dose. The Glivec International Patient Assistance Program is now open in 67 countries providing treatment to more than 9,500 patients worldwide who otherwise would not have access to this innovative therapy.

**Zometa** (+21%; +17% lc; US: +9%), the top intravenous bisphosphonate for bone metastases, maintained its market share and remains on track to become a blockbuster despite challenges related to US Medicare reimbursement policy and high penetration rates in breast cancer and myeloma. **Zometa** is making progress on increasing the use of intravenous (IV) bisphosphonates in the treatment of prostate and lung cancer patients, and it was submitted for regulatory approval in Japan for bone metastases in the third quarter.

**Femara** (+65%; +58% lc; US: +121%), a leading first-line therapy for advanced breast cancer in postmenopausal women, kept up its robust growth rate as more patients benefit from the use of this anti-cancer agent in the treatment of post-menopausal women in the "extended adjuvant setting," meaning that they have undergone breast cancer surgery and have completed standard adjuvant tamoxifen treatment. Results from the final analysis of MA-17 were presented at the annual meeting of the American Society for Clinical Oncology (ASCO) in June 2004. The data showed that extended adjuvant treatment with **Femara**, following the standard use of tamoxifen, cut the risk of relapse by 42%.

## Ophthalmics

Nine-month sales rose 29% (+23% lc) due mainly to continued penetration of *Visudyne* (+24%; +19% lc; US: +15%) as the leading treatment for "wet" AMD (age-related macular degeneration) in the US as well as Europe. Improved Medicare reimbursement for additional lesion types drove US sales growth. Sales in Europe remained strong despite cost-containment measures in key markets.

## Transplantation

Sales for the transplantation business unit for the first three quarters of 2004 rose 2% (-5% lc), despite flat sales from the *Neoral* and *Sandimmun* franchise (USD 742 million; +0%; -6% lc). Novartis celebrated its 20 years of experience in transplantation at the International Society of Transplantation meeting in Vienna. The recently launched treatment *myfortic* is now registered in over 40 countries, including the US. Sales of *myfortic* were driven by market share gains in Germany and Switzerland as well as prescription growth in the US. Launch activities for *Certican*, a novel proliferation signal inhibitor, continue in select countries worldwide. *Simulect*, which reported a 20% increase in nine-month sales (+14% lc), received a positive recommendation from the UK National Institute for Clinical Excellence (NICE) in September.

## Selected regulatory and clinical highlights

Novartis is on target with the build-up of the Group's new research headquarters in Cambridge, Massachusetts. An additional 766 research associates have already been recruited, and the new research center is officially opened.

Novartis expects to achieve its 2004 objectives for key development projects and regulatory milestones. Among the third-quarter developments:

*Zelnorm* received FDA approval in August 2004 for the additional indication of treating chronic idiopathic constipation in both men and women under age 65. About 4.5 million Americans are estimated to suffer from constipation most of the time, leading to about one million emergency room visits annually and thousands of hospitalizations. Separately, this product, known as *Zelmac* in other areas of the world, was submitted for EU regulatory approval in October.

A total of 22 countries, including the UK and some Latin American countries, have approved *Diovan* for a post-myocardial infarction indication based on positive data from the VALIANT (VALsartan In Acute myocardial iNfarcTion) trial. Novartis is pursuing this indication in 14 member states of the EU and in Iceland through the Mutual Recognition Procedure. National applications have been filed in the US, France, Switzerland and Australia as well as in certain Asian and Latin American countries. In the US, Novartis recently submitted additional data to the FDA to supplement its review, which was recently extended for three months.

*Xolair*, the first humanized therapeutic antibody for the treatment of asthma, was submitted in June for EU approval based on clinical trial experience in 5,500 patients. Results from these trials demonstrate that *Xolair* is an effective treatment option which should be considered as an add-on therapy for patients who continue to suffer with inadequately controlled severe asthma. *Xolair* was developed jointly with Genentech, Inc., and Tanox, Inc., and approved in the US in June 2003. It is estimated that more than 28,000 patients have been referred for *Xolair* treatment since launch. *Xolair* is also approved in Australia, New Zealand and Brazil.

In August, Switzerland became the first European country to grant approval for the use of *Femara* in the treatment of post-menopausal women who have undergone surgery for breast cancer and have taken tamoxifen for five years. The United Kingdom granted approval in September, and the FDA is expected to decide on approval by the end of October 2004 after granting priority review for this application in June 2004.

Zoledronic acid was submitted in the US and EU for regulatory approval for the treatment of Paget's disease, a chronic condition that causes abnormal bone growth. This compound is also being developed as a once yearly treatment for osteoporosis.

The EU's Committee for Medicinal Products for Human Use (CHMP) adopted a positive opinion in July recommending approval for *Emselex* (*Enablex* in the US) for the treatment of overactive bladder (OAB) in all 25 EU countries as well as Norway and Iceland. OAB is a very common condition estimated to affect about 16% of the world's population.

The landmark TARGET study, the largest ever safety study for a selective COX-2 inhibitor and published in August in *The Lancet*, showed that *Prexige* significantly reduced gastrointestinal events with no statistically significant difference in cardiovascular safety compared to two common non-steroidal anti-inflammatory drugs (NSAIDs). The results of this study underscore the favorable benefit/risk ratio for *Prexige*, even at multiples of the normal dose for chronic treatment. *Prexige* is progressing through the European MRP process. In the US, resubmission is expected in 2007.

Enrollment in CONFIRM 2, one of two pivotal trials investigating the anti-cancer drug **PTK787** in colorectal cancer, has been completed following full enrollment in CONFIRM 1. PTK787 is being co-developed with Schering AG. Submission for US regulatory approval is planned for the second half of 2005.

*Focalin XR* extended release capsules, an investigational treatment for children and adults with Attention-Deficit/Hyperactivity Disorder (ADHD), has been submitted for US regulatory approval. If approved, *Focalin XR* will be the first and only once-daily methylphenidate approved for use in adult patients.

During the fourth quarter, Novartis expects to receive the first phase III data for the renin inhibitor aliskiren (SPP100/hypertension) evaluating the blood pressure lowering effects of the combination of this new compound with valsartan, the active ingredient in *Diovan*.

In addition, data from the BIG 1-98 trial on the aromatase inhibitor *Femara* (breast cancer) comparing five years of *Femara* with five years of tamoxifen for use in the early adjuvant setting is expected to be presented in January 2005.

Also in Oncology, phase III clinical data for the iron chelator ICL670 (iron overload) is expected to become available by the end of 2004.

To release pipeline information closely linked to news flow, Novartis will replace the R&D Day event scheduled for November 30, 2004, with several R&D updates beginning on January 20, 2005, coinciding with the reporting of full-year results.

## Corporate

### Corporate income/expense, net

Net corporate income totaled USD 6 million in the first nine months of 2004 compared to an income of USD 44 million in the year-ago period.

### Financial income, net

Net financial income was USD 161 million in the first nine months of 2004, significantly less than USD 395 million in the year-ago period, due primarily to the current low-yield environment. The overall return on net liquidity was 3.3%, in part due to gains made on the sale of shares and options, compared to 8.0% in the year-ago period.

### **Result from associated companies**

Income from associated companies overall increased sharply to USD 137 million. As a consequence of Chiron's announcement of lower earnings due to flu vaccine production issues, the Novartis investment in Chiron contributed USD 36 million compared to USD 107 million in the year-ago period. We are anticipating that the Chiron investment will not provide any additional income in the fourth quarter of 2004. The investment in Roche resulted in income of USD 88 million for the first nine months of the year compared to an expense of USD 332 million a year ago.

### **Strong balance sheet**

In August 2004, Novartis announced the completion of the third share-repurchase program and the start of a fourth program to repurchase shares via a second trading line on the SWX Swiss Exchange. In 2004, a total of 22.8 million shares were repurchased for USD 1 billion to complete the third repurchase program. Since the start of the fourth program, a total of 10.6 million shares have been repurchased for USD 0.5 billion. Overall in 2004, a total of 36.4 million shares have been repurchased for USD 1.7 billion, which includes shares bought through the repurchase programs and additional shares bought on the first trading line. It is anticipated that shareholders will be requested at the next General Meeting to approve the retirement of the shares bought through the repurchase programs.

Group equity amounted to USD 31.0 billion at September 30, 2004, an increase of USD 0.6 billion compared to the beginning of 2004 as Group net income of USD 4.4 billion and positive fair value adjustments of USD 0.3 billion more than offset a reduction of treasury share purchases of USD 1.7 billion, dividend payments of USD 2.0 billion and cumulative translation adjustments of USD 0.4 billion. The debt/equity ratio improved to 0.18:1 as of September 30, 2004, compared to 0.20:1 as of December 31, 2003.

Novartis has maintained the strength of its balance sheet and continues to be one of the few non-financial European companies to have the highest Triple-A rating by Standard & Poor's and Moody's, a rating that has been retained since the creation of Novartis in 1996.

### **Cash flow**

The strong business expansion and proactive management of working capital led to higher cash flow from operating activities, which increased to USD 5.0 billion for the first nine months of 2004 compared to USD 4.8 billion in the year-ago period.

### **Novartis again named to the Dow Jones Sustainability Index**

Novartis has again been named as a member of the Dow Jones Sustainability Index, a recognition awarded to the Group annually since the global benchmark index for socially responsible investing was first launched in September 1999. Novartis is a member of both the Dow Jones Sustainability World Index (DJSI World) and the more selective Dow Jones STOXX Sustainability Index (DJSI STOXX), reflecting the company's commitment to being measured for its economic, environmental and social performance.

### **Disclaimer**

This release contains certain forward-looking statements relating to the Group's business, which can be identified by the use of forward-looking terminology such as "is on track", "remains on track", "expected", "is planned", "If approved, will be", "expects", "will", "are anticipating", "outlook", "are predicted", "is on target", or similar expressions, or express or implied discussions regarding potential future sales of existing products, potential new products or potential new indications for existing products, or by other discussions of strategy, plans or intentions. Such statements reflect the current

views of the Group with respect to future events and are subject to certain risks, uncertainties and assumptions. There can be no guarantee that existing products will reach any particular sales levels, or that any new products will be approved for sale in any market, or that any new indications will be approved for existing products in any market. In particular, management's expectations could be affected by, among other things, new clinical data; unexpected clinical trial results; unexpected regulatory actions or delays or government regulation generally; the Group's ability to obtain or maintain patent or other proprietary intellectual property protection; competition in general; government, industry, and general public pricing pressures and other risks and factors referred to in the Group's current Form 20-F on file with the US Securities and Exchange Commission. Should one or more of these risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those described herein as anticipated, believed, estimated or expected. Novartis is providing the information in this press release as of this date and does not undertake any obligation to update any forward-looking statements contained in this press release as a result of new information, future events or otherwise.

**About Novartis**

Novartis AG (NYSE: NVS) is a world leader in pharmaceuticals and consumer health. In 2003, the Group's businesses achieved sales of USD 24.9 billion and a net income of USD 5.0 billion. The Group invested approximately USD 3.8 billion in R&D. Headquartered in Basel, Switzerland, Novartis Group companies employ about 81,000 people and operate in over 140 countries around the world. For further information please consult <http://www.novartis.com>.

**Notes to the interim financial report for the first nine months ended September 30, 2004** (unaudited)

**1. Basis of preparation**

This unaudited interim financial report has been prepared in accordance with the accounting policies set out in the 2003 Annual Report and International Accounting Standard 34 on Interim Financial Reporting.

There were no significant changes in accounting policies or estimates or in any contingent liabilities from those disclosed in the 2003 Annual Report, except that the Group has amended its accounting estimate on recognizing impairments on available-for-sale equity securities. Impairments are now recorded when the fair value is less than cost at the interim reporting balance sheet date (previously when the fair value was 50% of cost for a sustained period of six months).

**2. Changes in the scope of consolidation and other significant transactions**

The following significant transactions were made during the nine months to September 30, 2004, and in 2003:

**2004**

**Pharmaceuticals**

On July 21, Idenix completed an Initial Public Offering (IPO) of its shares. Novartis retained its existing stake at 57%. As a result, Group liquidity increased by USD 60 million.

**Sandoz**

On June 30, Novartis acquired the Danish generics company Durascan A/S from AstraZeneca plc. Based on a preliminary estimate, goodwill of USD 61 million has been recorded on this transaction.

On August 13, Novartis completed the acquisition of Sabex Holdings Ltd., a Canadian generic manufacturer with a leading position in generic injectables, for USD 565 million. Based on the preliminary estimate, goodwill of USD 262 million has been recorded on this transaction.

A total of USD 13 million of sales were recorded since the closure of these two transactions in the first nine months of 2004.

**Medical Nutrition**

On February 13, Novartis completed the acquisition of Mead Johnson & Company's global adult medical nutrition business for USD 385 million in cash. These activities are included in the consolidated financial statements from that date with USD 159 million of sales being recorded in the first nine months of 2004. Based on a preliminary estimate, goodwill of USD 185 million has been recorded on this transaction.

**Corporate**

During the first three quarters of 2004, Group financial income, net, has benefited from an exceptional recycled translation gain of USD 301 million from the partial repayment of capital of a subsidiary offset by USD 180 million of realized losses on marketable securities and the additional impairment charge of USD 90 million from the change in accounting estimate on available-for-sale securities.

2003

**Pharmaceuticals**

On February 11, Novartis announced the completed sale of the US rights to its *Fioricet* and *Fiorinal* lines (tension headache treatments) to Watson Pharmaceuticals, Inc. for USD 178 million.

On April 23, the urinary incontinence treatment *Enablex* (darifenacin) was acquired from Pfizer for a total of up to USD 225 million, part of which is still conditional on certain marketing approvals in the US and EU.

On May 8, a total of 51% of the fully diluted capital stock of Idenix Pharmaceuticals Inc. was acquired for an initial payment of USD 255 million in cash. This company is included in the consolidated financial statements from that date. Goodwill of USD 297 million has been recorded on this transaction.

## 5. Significant differences between IFRS and United States Generally Accepted Accounting Principles

The Group's consolidated financial statements have been prepared in accordance with IFRS, which, as applied by the Group, differs in certain significant respects from US GAAP. The effects of the application of US GAAP to net income and equity are set out in the tables below.

For further comments regarding the nature of these adjustments please consult Note 32 of the Novartis 2003 annual report.

	Nine months 2004 USD m	Nine months 2003 USD m
<b>Net income under IFRS</b>	<b>4 389</b>	<b>3 656</b>
