SIGNATURES

Forward Looking Statements

This Form 10-Q contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended (the “Securities Act”), and Section 21E of the Securities Exchange Act of 1934, as amended (the “Exchange Act”), which are subject to the safe harbors created by such sections. When used in this Form 10-Q or future filings by First BanCorp. (the “Corporation”) with the U.S. Securities and Exchange Commission (“SEC”), in the Corporation’s press releases or in other public or stockholder communications, or in oral statements made with the approval of an authorized executive officer, the words or phrases “would,” “will allow,” “intends,” “will likely result,” “expect to,” “should,” “anticipate,” “look forward,” “believes,” and other terms of similar meaning or import in connection with any discussion of future operating, financial or other performance are meant to identify “forward-looking statements.”

FirstBanCorp. wishes to caution readers not to place undue reliance on any such “forward-looking statements,” which speak only as of the date made, and to advise readers that these forward-looking statements are not guarantees of future performance and involve certain risks, uncertainties, estimates and assumptions by us that are difficult to predict. Various factors, some of which are beyond our control, could cause actual results to differ materially from those expressed in, or implied by, such forward-looking statements. Factors that might cause such a difference include, but are not limited to, the risks described or referenced below in Item 1A. “Risk Factors,” and the following:

- the ability of the Puerto Rico government or any of its public corporations or other instrumentalities to repay its respective debt obligations, including the effect of recent payment defaults on the Puerto Rico government general obligations, bonds of the Government Development Bank for Puerto Rico (the “GDB”) and certain bonds of government public corporations, and recent and any future downgrades of the long-term and short-term debt ratings of the Puerto Rico government, which could exacerbate Puerto Rico’s adverse economic conditions and, in turn, further adversely impact the Corporation;
- uncertainty as to the ultimate outcomes of actions resulting from the enactment by the U.S. government of the Puerto Rico Oversight, Management, and Economic Stability Act (PROMESA) to address Puerto Rico’s financial problems;
- uncertainty about whether the Corporation will be able to continue to fully comply with the written agreement dated June 3, 2010 (the “Written Agreement”) that the Corporation entered into with the Federal Reserve Bank of New York (the “New York FED” or “Federal Reserve”) that, among other things, requires the Corporation to serve as a source of strength to FirstBank Puerto Rico (“FirstBank” or the “Bank”) and that, except with the consent generally of the New York FED and the Board of Governors of the Federal Reserve System (the “Federal Reserve Board”), prohibits the Corporation from paying dividends to stockholders or receiving dividends from FirstBank, making payments on trust preferred securities or subordinated debt and incurring, increasing or guaranteeing debt or repurchasing any capital securities and uncertainty whether such consent will be provided for future interest payments on the subordinated debt despite the consent that enabled the Corporation to pay all the accrued but deferred interest payments plus the interest

for the second quarter of 2016 on the Corporation's subordinated debentures associated with its trust preferred securities;

- a decrease in demand for the Corporation's products and services and lower revenues and earnings because of the continued recession in Puerto Rico;
- uncertainty as to the availability of certain funding sources, such as retail brokered certificates of deposit ("brokered CDs");
- the Corporation's reliance on brokered CDs to fund operations and provide liquidity;
- the risk of not being able to fulfill the Corporation's cash obligations or resume paying dividends to the Corporation's stockholders in the future due to the Corporation's need to receive approval from the New York FED and the Federal Reserve Board to declare or pay any dividends and to take dividends or any other form of payment representing a reduction in capital from FirstBank or FirstBank's failure to generate sufficient cash flow to make a dividend payment to the Corporation;
- the weakness of the real estate markets and of the consumer and commercial sectors and their impact on the credit quality of the Corporation's loans and other assets, which have contributed and may continue to contribute to, among other things, high levels of non-performing assets, charge-offs and provisions for loan and lease losses and may subject the Corporation to further risk from loan defaults and foreclosures;
- the ability of FirstBank to realize the benefits of its deferred tax assets subject to the remaining valuation allowance;
- adverse changes in general economic conditions in Puerto Rico, the U.S., and the U.S. Virgin Islands ("USVI") and British Virgin Islands ("BVI"), including the interest rate environment, market liquidity, housing absorption rates, real estate prices, and disruptions in the U.S. capital markets, which reduced interest margins and affected funding sources, and has affected

demand for all of the Corporation's products and services and reduced the Corporation's revenues and earnings, and the value of the Corporation's assets, and may continue to have these effects;

- an adverse change in the Corporation's ability to attract new clients and retain existing ones;

- the risk that additional portions of the unrealized losses in the Corporation's investment portfolio are determined to be other-than-temporary, including additional impairments on the Puerto Rico government's obligations;

- uncertainty about regulatory and legislative changes for financial services companies in Puerto Rico, the U.S., the USVI and the BVI, which could affect the Corporation's financial condition or performance and could cause the Corporation's actual results for future periods to differ materially from prior results and anticipated or projected results;

- changes in the fiscal and monetary policies and regulations of the U.S. federal government and the Puerto Rico and other governments, including those determined by the Federal Reserve Board, the New York FED, the Federal Deposit Insurance Corporation ("FDIC"), government-sponsored housing agencies, and regulators in Puerto Rico, the USVI and the BVI;

- the risk of possible failure or circumvention of controls and procedures and the risk that the Corporation's risk management policies may not be adequate;

- the risk that the FDIC may increase the deposit insurance premium and/or require special assessments to replenish its insurance fund, causing an additional increase in the Corporation's non-interest expenses;

- the impact on the Corporation's results of operations and financial condition of acquisitions and dispositions;

- a need to recognize impairments on the Corporation's financial instruments, goodwill or other intangible assets relating to acquisitions;

- the risk that downgrades in the credit ratings of the Corporation's long-term senior debt will adversely affect the Corporation's ability to access necessary external funds;
- the impact on the Corporation's businesses, business practices and results of operations of a potential higher interest rate environment; and
- general competitive factors and industry consolidation.

The Corporation does not undertake, and specifically disclaims any obligation, to update or revise any of the "forward-looking statements" to reflect occurrences or unanticipated events or circumstances after the date of such statements, except as required by the federal securities laws.

Investors should refer to the Corporation's Annual Report on Form 10-K for the year ended December 31, 2015, as well as "Part II, Item 1A, Risk Factors" in this quarterly report on Form 10-Q, for a discussion of such factors and certain risks and uncertainties to which the Corporation is subject.

FIRST BANCORP.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(Unaudited)

1 – BASIS OF PRESENTATION AND SIGNIFICANT ACCOUNTING POLICIES

The Consolidated Financial Statements (unaudited) of First BanCorp. (the “Corporation”) have been prepared in conformity with the accounting policies stated in the Corporation’s Audited Consolidated Financial Statements included in the Corporation’s Annual Report on Form 10-K for the year ended December 31, 2015. Certain information and note disclosures normally included in the financial statements prepared in accordance with generally accepted accounting principles in the United States of America (“GAAP”) have been condensed or omitted from these statements pursuant to the rules and regulations of the SEC and, accordingly, these financial statements should be read in conjunction with the Audited Consolidated Financial Statements of the Corporation for the year ended December 31, 2015, which are included in the Corporation’s 2015 Annual Report on Form 10-K. All adjustments (consisting only of normal recurring adjustments) that are, in the opinion of management, necessary for a fair presentation of the statement of financial position, results of operations and cash flows for the interim periods have been reflected. All intercompany accounts and transactions have been eliminated in consolidation.

During the second quarter of 2016, the Corporation reviewed its historical accounting treatment as loans for its \$161.3 million of financing arrangements with Puerto Rico municipalities issued in bond form, but underwritten as loans with features that are typically found in commercial loan transactions. This review came as a result of the recent determination of the Federal Reserve Board that the transactions must be treated for regulatory reporting purposes as investment securities. The Puerto Rico Municipal Finance Act (the “Act”) requires the designation of financing arrangements obtained by municipalities with maturities greater than 8 years as “special obligation bonds” subject to specific provisions under the Act. The Corporation has concluded that the impact of accounting for the transactions as investment securities rather than loans does not have a material effect on previously reported results of operations, financial condition, or cash flows and, accordingly, these financing arrangements are now accounted for and reported as held-to-maturity investment securities and not as loans as of June 30, 2016 and for prior periods.

The results of operations for the quarter and six-month period ended June 30, 2016 are not necessarily indicative of the results to be expected for the entire year.

Adoption of new accounting requirements and recently issued but not yet effective accounting requirements

Adoption of new accounting requirements and recently issued but not yet effective accounting requirements

The Financial Accounting Standards Board (“FASB”) has issued the following accounting pronouncements and guidance relevant to the Corporation’s operations:

In June 2014, the FASB updated the Accounting Standards Codification (the “Codification” or the “ASC”) to provide guidance for determining compensation cost when an employee’s compensation award is eligible to vest regardless of whether the employee is rendering service on the date the performance target is achieved. This Update is effective for annual and interim periods beginning after December 15, 2015. The adoption of this guidance did not have an impact on the Corporation’s financial statements.

In November 2014, the FASB updated the Codification to clarify how current GAAP should be interpreted in evaluating the economic characteristics and risk of a host contract in a hybrid financial instrument that is issued in the form of a share. In addition, the Update was issued to clarify that, in evaluating the nature of a host contract, an entity should assess the substance of the relevant terms and features (that is, the relative strength of the debt-like or equity-like terms and features given the facts and circumstances) when considering how to weight those terms and features. The effects of initially adopting this Update should be applied on a modified retrospective basis to existing hybrid financial instruments issued in the form of a share as of the beginning of the fiscal year for which the amendments are effective. Retrospective application is permitted to all relevant prior periods. This Update is effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2015. The adoption of this guidance did not have an impact on the Corporation’s financial statements.

In January 2015, the FASB updated the Codification to eliminate from GAAP the concept of extraordinary items as part of its initiative to reduce complexity in accounting standards (the Simplification Initiative). Under current GAAP, an event or transaction is presumed to be an ordinary and usual activity of the reporting entity unless evidence clearly supports its classification as an extraordinary item. In order to be classified as an extraordinary item, the event or transaction must be: (i) unusual in nature and (ii) infrequent in occurrence. Before the Update was issued, an entity was required to segregate these items from the results of ordinary operations and show the items separately in the income statement, net of tax, after income from continuing operations. This Update is effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2015. The adoption of this guidance did not have an impact on the Corporation’s financial statements.

In February 2015, the FASB updated the Codification to eliminate the deferral of the requirements of Accounting Standards Update (“ASU”) No. 2009-17 for certain interests in investment funds and provide a scope for exception for certain investments in money market funds. While the Update is aimed at asset managers, it will affect all reporting entities involved with limited partnerships or similar entities. In some cases, consolidation conclusions will change. In other cases, reporting entities will need to provide additional

disclosure about entities that currently are not considered Variable Interest Entities (“VIEs”) but will be considered VIEs under the new guidance when they have a variable interest in those VIEs. Regardless of whether conclusions change or additional disclosure requirements are triggered, reporting entities will need to re-evaluate limited partnerships and similar entities for consolidation and revise their documentation. For public business entities, the Update is effective for annual and interim periods beginning after December 15, 2015. A reporting entity must apply the amendments retrospectively. The adoption of this guidance did not have an impact on the Corporation’s financial statements.

In April 2015, the FASB updated the Codification to clarify that customers should determine whether a cloud computing arrangement includes the license of software by applying the same guidance cloud service providers use to make this determination. Examples of cloud computing arrangements include software as a service, platform as a service, infrastructure as a service and other hosting arrangements. If a hosting arrangement includes a software license for internal use software, the software license should be accounted for by the customer under ASC 350-40. A license of software other than internal use software would be accounted for by the customer under other GAAP (e.g., a research and development cost and software to be sold, leased or otherwise marketed). A software license included in a hosting arrangement would be accounted for separately from any service contract in the arrangement. Hosting arrangements that do not include software licenses should be accounted for as service contracts. The Update also eliminates the existing requirement for customers to account for software licenses they acquire by analogizing to the guidance on leases. Instead, customers will account for software licenses that are in the scope of ASC 350-40 in the same manner as licenses of other intangible assets. Entities have the option of applying the guidance (1) prospectively to all arrangements entered into or materially modified after the effective date or (2) retrospectively. Entities that elect prospective application are required to disclose the reason for the change in accounting principle, the transition method, and a description of the financial statement line items affected by the change. Entities that elect retrospective application must disclose the information required by ASC 250. For public business entities, the guidance is effective for annual periods, including interim periods within those annual periods, beginning after December 15, 2015. The adoption of this guidance did not have an impact on the Corporation’s financial statements.

In May 2015, the FASB updated the Codification to provide guidance on disclosures for investments in certain entities that calculate net asset value (NAV) per share (or its equivalent). This Update removes the requirement to categorize within the fair value hierarchy all investments for which fair value is measured using the net asset value per share practical expedient and modifies certain disclosure requirements. This guidance is effective for interim and annual reporting periods in fiscal years beginning after December 31, 2015, and requires retrospective adoption. The adoption of this pronouncement did not have an impact on the Corporation’s financial statements.

In September 2015, the FASB updated the Codification to simplify the accounting for adjustments made to provisional amounts recognized in a business combination by eliminating the requirement to retrospectively account for those adjustments. This Update allows the acquirer to recognize adjustments to provisional amounts that are identified during the measurement period in the reporting period in which the adjustment amounts are determined. The acquirer must record, in the same period’s financial statements, the effect on earnings of changes in depreciation, amortization, or other income effects, if any, as a result of the change to the provisional amounts, calculated as if the accounting had been completed at the acquisition date. Also, this Update requires entities to present separately on the face of the income statement or disclose in the notes the portion of the amount recorded in current-period earnings by line item that would have been recorded in previous reporting periods if the adjustment to the provisional amounts had

been recognized as of the acquisition date. Prior to this Update, GAAP required that, during the measurement period, the acquirer retrospectively adjust the provisional amounts recognized at the acquisition date with a corresponding adjustment to goodwill. The acquirer also had to revise comparative information for prior periods presented in financial statements as needed, including revising depreciation, amortization, or other income effects as a result of changes made to provisional amounts. For public business entities, the amendments in this Update are effective for fiscal years beginning after December 15, 2015, including interim periods within those fiscal years. The amendments in this Update should be applied prospectively to adjustments to provisional amounts that occur after the effective date of this Update with earlier application permitted for financial statements that have not been issued. The adoption of this guidance did not have an impact on the Corporation's financial statements.

In March 2016, the FASB updated the Codification to simplify certain aspects of the accounting for share-based payment transactions. The main provisions in this Update include: (i) recognition of all tax benefits and tax deficiencies (including tax benefits of dividends on share-base payment awards) as income tax expense or benefit in the income statement, (ii) classification of the excess tax benefit along with other income tax cash flows as an operating activity, (iii) an entity-wide accounting policy election to either estimate the number of awards that are expected to vest (current GAAP) or account for forfeitures when they occur, (iv) a threshold to qualify for equity classification which permits withholding up to the maximum statutory tax rates in the applicable jurisdictions, and (v) classification of cash paid by an employer as a financing activity when the payment results from the withholding of shares for tax withholding purposes. In addition to those simplifications, the amendments eliminate the guidance in ASC 718 that was indefinitely deferred shortly after the issuance of FASB Statement No. 123 (revised 2004), Share-Based Payment. This should not result in a change in practice because the guidance that is being superseded was never effective. For public business entities, the amendments in this Update are effective for annual periods beginning after December 15, 2016, and interim periods within those annual periods. The Corporation is currently evaluating the impact of the adoption of this guidance on its consolidated financial statements.

In March 2016, the FASB updated the Codification to require an equity method investor to add the cost of acquiring the additional interest in the investee to the current basis of the investor's previously held interest and adopt the equity method of accounting as of the date the investment becomes qualified for equity method accounting. Therefore, upon qualifying for the equity method of accounting, no retroactive adjustment of the investment is required. Also, this Update requires that an entity that has an available-for sale equity security that becomes qualified for the equity method of accounting recognize through earnings the unrealized holding gain or loss in accumulated other comprehensive income at the date the investment becomes qualified for use of the equity method. The amendments in this Update are effective for all entities for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2016. The amendments should be applied prospectively upon their effective date to increases in the level of ownership interest or degree of influence that result in the adoption of the equity method. Earlier application is permitted. The Corporation is currently evaluating the impact of the adoption of this guidance, if any, on its consolidated financial statements.

In June 2016, the FASB updated the Codification and issued ASU 2016-13, Financial Instruments – Credit Losses (Topic 326), which introduces new guidance for the accounting for credit losses on instruments within its scope. The new guidance introduces an approach based on expected losses to estimate credit losses on certain types of financial instruments. It also modifies the impairment model for available-for-sale debt securities and provides for a simplified accounting model for purchased financial assets with credit deterioration since their origination.

The new model, referred to as the current expected credit losses (CECL) model, will apply to: (1) financial assets subject to credit losses and measured at amortized cost and (2) certain off-balance sheet credit exposures. This includes loans, held-to-maturity debt securities, loan commitments, financial guarantees, and net investments in leases, as well as reinsurance and trade receivables. Upon initial recognition of the exposure, the CECL model requires an entity to estimate the credit losses expected over the life of an exposure (or pool of exposures). The estimate of expected credit losses (ECL) should consider historical information, current information, and reasonable and supportable forecasts, including estimates of prepayments. Financial instruments with similar risk characteristics should be grouped together when estimating ECL. The ASU does not prescribe a specific method to make the estimate so its application will require significant judgment.

Generally, upon initial recognition of a financial asset the estimate of the ECL will be recorded through an allowance for loan and lease losses with an offset to current earnings. Subsequently, the ECL will need to be assessed each period, and both negative and positive changes to the estimate will be recognized through an adjustment to the allowance for loan and lease losses and earnings.

The ASU amends the current available-for-sale security other-than-temporary impairment (OTTI) model for debt securities. The new available-for-sale debt security model will require an estimate of ECL only when the fair value is below the amortized cost of the asset. The length of time the fair value of an available-for-sale debt security has been below the amortized cost will no longer impact the determination of whether a credit loss exists. As such, the new available-for-sale debt security model is not an OTTI model. In addition, credit losses on available-for-sale debt securities will now be limited to the difference between the security's amortized cost basis and its fair value. The available-for-sale debt security model will also require the use of an allowance to record estimated credit losses (and subsequent recoveries).

The purchased financial assets with credit deterioration (PCD) model applies to purchased financial assets (measured at amortized cost or available-for-sale) that have experienced more than insignificant credit deterioration since origination. This represents a change from the scope of what are considered purchased credit-impaired assets under

today's model. In contrast to the accounting for originated or purchased assets that do not qualify as PCD, the initial estimate of expected credit losses for a PCD would be recognized through an allowance for loan and lease losses with an offset to the cost basis of the related financial asset at acquisition (i.e., there is no impact to net income at initial recognition). Subsequently, the accounting will follow the applicable CECL or available-for-sale debt security impairment model with all adjustments of the allowance for loan and lease losses recognized through earnings. Beneficial interests classified as held-to-maturity or available-for-sale will need to apply the PCD model if the beneficial interest meets the definition of PCD or if there is a significant difference between contractual and expected cash flows at initial recognition.

In general, the new guidance will require modified retrospective application to all outstanding instruments, with a cumulative effect adjustment recorded to opening retained earnings as of the beginning of the first period in which the guidance becomes effective. However, prospective application is required for PCD assets previously accounted for under ASC 310-30 and for debt securities for which an other-than-temporary impairment was recognized prior to the date of adoption.

ASU 2016-13 also expands the disclosure requirements regarding an entity's assumptions, models, and methods for estimating the allowance for loan and lease losses. In addition, public business entities will need to disclose the amortized cost balance for each class of financial asset by credit quality indicator, disaggregated by the year of origination (i.e., by vintage year).

The ASU will be effective for public business entities that are SEC filers in fiscal years beginning after December 15, 2019, including interim periods within those fiscal years. Early application of the guidance will be permitted for fiscal years beginning after December 15, 2018, including interim periods within those fiscal years. The Corporation is currently evaluating the impact of the adoption of this guidance on its consolidated financial statements.

NOTE 2 – EARNINGS PER COMMON SHARE

The calculations of earnings (loss) per common share for the quarters and six-month periods ended June 30, 2016 and 2015 are as follows:												
	Quarter Ended						Six-Month Period Ended					
	June 30,						June 30,					
	2016			2015			2016			2015		
(In thousands, except per share information)												
Net income (loss)	\$	21,953		\$	(34,074)		\$	45,297		\$	(8,428)	
Net income (loss) attributable to common stockholders	\$	21,953		\$	(34,074)		\$	45,297		\$	(8,428)	
Weighted-Average Shares:												
Average common shares outstanding		212,768			211,247			212,558			210,968	
Average potential dilutive common shares		3,155			-			2,040			-	
Average common shares outstanding- assuming dilution		215,923			211,247			214,598			210,968	
Earnings (loss) per common share:												
Basic	\$	0.10		\$	(0.16)		\$	0.21		\$	(0.04)	
Diluted	\$	0.10		\$	(0.16)		\$	0.21		\$	(0.04)	

Earnings per common share is computed by dividing net income attributable to common stockholders by the weighted average number of common shares issued and outstanding. Net income attributable to common stockholders represents net income adjusted for any preferred stock dividends, including any dividends declared and any cumulative dividends related to the current dividend period that have not been declared as of the end of the period.

Potential common shares consist of common stock issuable under the assumed exercise of stock options, unvested shares of restricted stock, and outstanding warrants using the treasury stock method. This method assumes that the potential common shares are issued and the proceeds from the exercise, in addition to the amount of compensation cost attributable to future services, are used to purchase common stock at the exercise date. The difference between the number of potential shares issued and the shares purchased is added as incremental shares to the actual number of shares outstanding to compute diluted earnings per share. Stock options, unvested shares of restricted stock, and outstanding warrants that result in lower potential shares issued than shares purchased under the treasury stock method are not included in the computation of dilutive earnings per share since their inclusion would have an antidilutive

Adoption of new accounting requirements and recently issued but not yet effective accounting requirements

effect on earnings per share. Stock options not included in the computation of outstanding shares because they were antidilutive amounted to 39,855 and 69,848 as of June 30, 2016 and 2015, respectively. Warrants outstanding to purchase 1,285,899 shares of common stock and 2,939,794 unvested shares of restricted stock were excluded from the computation of diluted earnings per share for the quarter and six-month period ended June 30, 2015 because the Corporation reported a net loss attributable to common stockholders for the periods and their inclusion would have an antidilutive effect.

NOTE 3 – STOCK-BASED COMPENSATION

As of January 21, 2007, the Corporation’s 1997 stock option plan expired and no additional awards could be granted under that plan. All outstanding awards granted under this plan have continued in full force and effect since then, subject to their original terms. No awards of shares could be granted under the 1997 stock option plan as of its expiration.

The activity of stock options granted under the 1997 stock option plan for the six-month period ended June 30, 2016 is set forth below:								
						Weighted-Average		
						Remaining		Aggregate
	Number of		Weighted-Average		Contractual Term			Intrinsic Value
	Options		Exercise Price		(Years)			(In thousands)
Beginning of period outstanding and								
exercisable	69,848		\$ 160.30					
Options expired	(29,993)		190.07					
End of period outstanding and exercisable	39,855		\$ 137.89		0.5		\$	-

On May 24, 2016, the Corporation’s stockholders approved the amendment and restatement of the First BanCorp 2008 Omnibus Incentive Plan, as amended (the “Omnibus Plan”), to, among other things, increase the number of shares of Common Stock reserved for issuance under the Omnibus Plan, to extend the term of the Omnibus Plan to May 24, 2026 and to re-approve the material terms of the performance goals under the Omnibus Plan for purposes of Section 162(m) of the U.S. Internal Revenue Code of 1986, as amended. The Omnibus Plan provides for equity-based compensation incentives (the “awards”) through the grant of stock options, stock appreciation rights, restricted stock, restricted stock units, performance shares, cash-based awards and other stock-based awards. The Omnibus Plan authorizes the issuance of up to 7,335,928 shares of common stock, subject to adjustments for stock splits, reorganizations, and other similar events. The Corporation’s Board of Directors, upon receiving the relevant recommendation of the Compensation Committee, has the power and authority to determine those eligible to receive awards and to establish the terms and conditions of any awards, subject to various limits and vesting restrictions that apply to individual and aggregate awards.

Under the Omnibus Plan, during the first half of 2016, the Corporation issued 1,786,137 shares of restricted stock to employees subject to a vesting period of two years. Included in those 1,786,137 shares of restricted stock are

1,546,137 shares granted to certain senior officers consistent with the requirements of the Troubled Asset Relief Program (“TARP”) Interim Final Rule, which permit TARP recipients to grant “long-term restricted stock” without violating the prohibition on paying or accruing a bonus payment provided that: (i) the value of the grant may not exceed one-third of the amount of the employee’s annual compensation, (ii) no portion of the grant may vest before two years after the grant date, and (iii) the grant must be subject to a further restriction on transfer or payment as described below. Specifically, the stock that has otherwise vested may not become transferable at any time earlier than as permitted under the schedule set forth by TARP, which is based on the repayment in 25% increments of the aggregate financial assistance received from the U.S. Treasury. Hence, notwithstanding the vesting period mentioned above, the senior officers covered by TARP are restricted from transferring the shares. The U.S. Treasury confirmed that, effective March 2014, it has recovered more than 25% of its investment in First BanCorp. Therefore, the restriction on transfer relating to 25% of the shares granted under TARP requirements were released.

The fair value of the shares of restricted stock granted in the first half of 2016 was based on the market price of the Corporation’s outstanding common stock on the date of the grant. For the 1,546,137 shares of restricted stock granted under the TARP requirements, the market price was discounted due to TARP transferability restrictions. For purposes of determining the awards’ fair value, the Corporation estimated an appreciation of 14% in the value of the common stock using the Capital Asset Pricing Model as a basis of what would be a market participant’s expected return on the Corporation’s stock and assumed that the U.S. Treasury would hold the common stock of the Corporation that it currently owns for a period not to exceed two years, resulting in a fair value of \$1.43 for each share of restricted stock granted under the TARP requirements. Also, the Corporation used empirical data to estimate employee terminations; separate groups of employees that have similar historical exercise behavior were considered separately for valuation purposes.

The following table summarizes the restricted stock activity in the first half of 2016 under the Omnibus Plan for both executive officers covered by the TARP requirements and other employees as well as for the independent directors:				
Six-Month Period Ended				
June 30, 2016				
	Number of shares of restricted stock			Weighted-Average Grant Date Fair Value
Non-vested shares at beginning of year	2,968,461		\$	3.34
Granted	1,786,137			1.62
Forfeited	(1,000)			6.03
Vested	(468,391)			3.78
Non-vested shares at June 30, 2016	4,285,207		\$	2.57

For the quarter and six-month period ended June 30, 2016, the Corporation recognized \$1.0 million and \$1.9 million, respectively, of stock-based compensation expense related to restricted stock awards, compared to \$1.0 million and \$2.0 million for the same periods in 2015. As of June 30, 2016, there was \$4.9 million of total unrecognized compensation cost related to nonvested shares of restricted stock. The weighted average period over which the Corporation expects to recognize such cost is 1.7 years.

During the first half of 2015, 30,068 shares of restricted stock were awarded to one of the Corporation's independent directors subject to vesting periods that range from 1 to 5 years. In addition, during the first half of 2015, the Corporation issued 793,964 shares of restricted stock to employees and independent directors subject to vesting periods that range from 3 months to 3 years. Included in those 793,964 shares of restricted stock are 615,464 shares granted to certain senior officers consistent with the requirements of TARP. The employees covered by TARP are restricted from transferring the shares, subject to certain conditions as explained above.

The fair value of the shares of restricted stock granted in the first six months of 2015 was based on the market price of the Corporation's outstanding common stock on the date of the grant. For the 615,464 shares of restricted stock granted under the TARP requirements, the market price was discounted due to the post-vesting restrictions. For purposes of computing the discount, the Corporation estimated an appreciation of 14% in the value of the common stock using the Capital Asset Pricing Model as a basis of what would be a market participant's expected return on the Corporation's stock and assumed that the U.S. Treasury would hold the common stock of the Corporation that it owned as of the date of the grants for a period not to exceed one year, resulting in a fair value of \$3.18 for restricted shares granted under the TARP requirements.

Stock-based compensation accounting guidance requires the Corporation to reverse compensation expense for any awards that were forfeited due to employee or director turnover. Approximately \$5 thousand and \$36 thousand of compensation expense was reversed during the first half of 2016 and 2015, respectively, related to forfeited awards.

Also, under the Omnibus Plan, effective April 1, 2013, the Corporation's Board of Directors determined to increase the salary amounts paid to certain executive officers primarily by paying the increased salary amounts in the form of shares of the Corporation's common stock, instead of cash. During the first half of 2016, the Corporation issued 441,942 shares of common stock (first half of 2015 – 168,265 shares) with a weighted average market value of \$3.20 (first half of 2015 – \$6.20) as salary stock compensation. This resulted in a compensation expense of \$1.4 million recorded in the first half of 2016 (first half of 2015 – \$1.0 million).

For the first half of 2016, the Corporation withheld 134,949 shares (first half of 2015 – 56,486 shares) from the common stock paid to certain senior officers as additional compensation and 51,754 shares of restricted stock that vested during the first half of 2016 (first half of 2015 – 61,372) to cover employees' payroll and income tax withholding liabilities; these shares are held as treasury shares. The Corporation paid any fractional share of salary stock that the officer was entitled to in cash. In the consolidated financial statements, the Corporation treats shares withheld for tax purposes as common stock repurchases.

NOTE 4 – INVESTMENT SECURITIES*Investment Securities Available for Sale*

The amortized cost, non-credit loss component of other-than-temporary impairment (“OTTI”) recorded in other comprehensive income (“OCI”), gross unrealized gains and losses recorded in OCI, approximate fair value, and weighted average yield of investment securities available for sale by contractual maturities as of June 30, 2016 and December 31, 2015 were as follows:

		June 30, 2016

Maturities of mortgage-backed securities are based on contractual terms assuming no prepayments. Expected maturities of investments might differ from contractual maturities because they may be subject to prepayments and/or call options. The weighted average yield on investment securities available for sale is based on amortized cost and, therefore, does not give effect to changes in fair value. The net unrealized gain or loss on securities available for sale and the non-credit loss component of OTTI are presented as part of OCI.

The following tables show the Corporation's available-for-sale investments' fair value and gross unrealized losses, aggregated by investment category and length of time that individual securities have been in a continuous unrealized loss position, as of June 30, 2016 and December 31, 2015. The tables also include debt securities for which an OTTI was recognized and only the amount related to a credit loss was recognized in earnings. For unrealized losses for which OTTI was recognized, the related credit loss was charged against the amortized cost basis of the debt security.

Assessment for OTTI on Available-For-Sale Securities

Debt securities issued by U.S. government agencies, U.S. government-sponsored entities and the U.S. Treasury accounted for approximately 97% of the total available-for-sale portfolio as of June 30, 2016 and no credit losses are expected, given the explicit and implicit guarantees provided by the U.S. federal government. The Corporation's OTTI assessment was concentrated mainly on available-for-sale Puerto Rico Government debt securities, with an amortized cost of \$43.4 million, and on private label mortgage-backed securities ("MBS") with an amortized cost of \$31.7 million, and for which credit losses are evaluated on a quarterly basis. The Corporation considered the following factors in determining whether a credit loss exists and the period over which the debt security is expected to recover:

- The length of time and the extent to which the fair value has been less than the amortized cost basis;
- Any adverse change to the credit conditions and liquidity of the issuer, taking into consideration the latest information available about the financial condition of the issuer, credit ratings, the failure of the issuer to make scheduled principal or interest payments, recent legislation and government actions affecting the issuer's industry and actions taken by the issuer to deal with the present economic climate;
- Changes in the near term prospects of the underlying collateral of a security, if any, such as changes in default rates, loss severity given default, and significant changes in prepayment assumptions; and
- The level of cash flows generated from the underlying collateral, if any, supporting the principal and interest payments of the debt securities.

The Corporation recorded OTTI losses on available-for-sale debt securities as follows:

	Quarter ended				Six-Month Period Ended			
	June 30,				June 30,			
	2016		2015		2016		2015	
(In thousands)								
Total other-than-temporary impairment losses	\$	-	\$	(29,521)	\$	(1,845)	\$	(29,521)
Portion of other-than-temporary impairment recognized in OCI		-		16,424		(4,842)		16,268
Net impairment losses recognized in earnings (1)	\$	-	\$	(13,097)	\$	(6,687)	\$	(13,253)
(1)	For the first half of 2016 and 2015, approximately \$6.3 million and \$12.9 million, respectively, of the credit impairment recognized in earnings consisted of credit losses on Puerto Rico Government debt securities and \$0.4 million and \$0.6 million, respectively, was associated with credit losses on							

	private label MBS.

The following tables summarize the roll-forward of credit losses on debt securities held by the Corporation for which a portion of an OTTI is recognized in OCI:

debt securities	\$	5,777	\$	12,856	\$	397	\$	19,030	

In the first quarter of 2016, the Corporation recorded a \$6.3 million OTTI charge on three Puerto Rico Government debt securities held by the Corporation as part of its available-for-sale securities portfolio, specifically bonds of the GDB maturing on February 1, 2019 and the Puerto Rico Public Buildings Authority maturing on July 1, 2028. This was the third OTTI charge on these securities recorded since June 30, 2015, as OTTI charges of \$12.9 million and \$3.0 million were booked in the second and fourth quarters of 2015, respectively, and reduced the amortized cost basis of these three Puerto Rico Government debt securities to \$34.7 million as of June 30, 2016 (\$21.4 million of GDB bonds and \$13.3 million of Puerto Rico Public Buildings Authority bonds).

During the first half of 2016, in consideration of the latest available information about the Puerto Rico Government's financial condition, including the enactment of a debt moratorium law and the declaration of a state of emergency at the GDB, the issuance of the GDB and the Commonwealth's audited financial statements, as well as issuance of exchange proposals with the Commonwealth's creditors related to its outstanding bond obligations, the Corporation applied a discounted cash flow analysis to its Puerto Rico Government debt securities in order to calculate the cash flows expected to be collected and to determine if any portion of the decline in market value of these securities was considered a credit-related other-than-temporary impairment. The analysis derives an estimate of value based on the present value of risk-adjusted cash flows of the underlying securities and included the following components:

- The contractual future cash flows of the bonds are projected based on the key terms as set forth in the official statements for each security. Such key terms include, among others, the interest rate, amortization schedule, if any, and maturity date.
- The risk-adjusted cash flows are calculated based on a probability of default analysis and recovery rate assumptions, including the weighting of different scenarios of ultimate recovery, considering the credit rating of each security. Constant monthly default rates are assumed throughout the life of the bonds, which considers the respective security's credit rating as of the date of the analysis.
- The adjusted future cash flows are then discounted at the original effective yield of each investment based on the purchase price and expected risk-adjusted future cash flows as of the purchase date of each investment.

The discounted risk-adjusted cash flow analysis for the three Puerto Rico Government bonds mentioned above assumed a default probability of 100%, thus reflecting that it is more likely than not that these three bonds will default during their remaining terms. Based on this analysis, the Corporation determined that it is unlikely to receive all of the remaining contractual interest and principal amounts when due on these bonds and recorded, in the first quarter of 2016, other-than-temporary credit-related impairment charges amounting to \$6.3 million, assuming recovery rates ranging from 35% to 80% (weighted average of 61%). GDB defaulted on a \$28 million payment of interest due to its creditors on August 1, 2016, including interest due on bonds held by the Corporation. As of June 30, 2016, the Corporation had \$0.7 million of accrued interest receivable related to such bonds. The default marked the first time

Adoption of new accounting requirements and recently issued but not yet effective accounting requirements

the GDB failed to pay interest on bonds held by the Corporation.

The Corporation does not have the intention to sell these securities and has sufficient capital and liquidity to hold these securities until a recovery of the fair value occurs; as such, only the credit loss component was reflected in earnings. Given the significant and prolonged uncertainty of a debt restructuring process, the Corporation cannot be certain that future impairment charges will not be required against these securities.

In addition, during the first half of 2016, the Corporation recorded a \$0.4 million credit-related impairment loss associated with private label MBS, which are collateralized by fixed-rate mortgages on single-family residential properties in the United States. The interest rates on these private-label MBS is variable, tied to 3-month LIBOR and limited to the weighted-average coupon of the underlying collateral. The underlying mortgages are fixed-rate, single-family loans with original high FICO scores (over 700) and moderate original loan-to-value ratios (under 80%), as well as moderate delinquency levels.

Based on the expected cash flows, and since the Corporation does not have the intention to sell the securities and has sufficient capital and liquidity to hold these securities until a recovery of the fair value occurs, only the credit loss component was reflected in earnings. Significant assumptions in the valuation of the private label MBS were as follows:

	June 30, 2016			December 31, 2015		
	Weighted Average		Range	Weighted Average		Range
Discount rate	14.5%		14.5%	14.5%		14.5%
Prepayment rate	31%		21.83% - 100%	28%		15.92% - 100.00%
Projected Cumulative Loss Rate	7%		0.52% - 80%	7%		0.18% - 80.00%

Investments Held to Maturity

The amortized cost, gross unrealized gains and losses, approximate fair value, weighted-average yield and contractual maturities of investment securities held to maturity as of June 30, 2016 and December 2015 were as follows:

		June 30, 2016									
		Amortized cost	Gross Unrealized						Fair value	Weighted average yield %	
			gains					losses			
Puerto Rico Municipal Bonds:											
	After 1 to 5 years	\$ 1,371		\$ -		\$ 20		\$ 1,351		5.38

Total investment securities													
held to maturity	\$	161,483		\$	-		\$	29,939		\$	131,544		4.62

The following tables show the Corporation's held-to-maturity investments' fair value and gross unrealized losses, aggregated by investment category and length of time that individual securities have been in a continuous unrealized loss position, as of June 30, 2016 and December 31, 2015:

	As of June 30, 2016											
	Less than 12 months				12 months or more				Total			
			Unrealized				Unrealized				Unrealized	
	Fair Value	Losses	Fair Value	Losses	Fair Value	Losses	Fair Value	Losses				
	(In thousands)											
Debt securities:												
Puerto Rico Municipal Bonds	\$ -	\$ -	\$ 137,965	\$ 23,377	\$ 137,965	\$ 23,377						
	As of December 31, 2015											
	Less than 12 months				12 months or more				Total			
			Unrealized				Unrealized				Unrealized	
	Fair Value	Losses	Fair Value	Losses	Fair Value	Losses	Fair Value	Losses				
	(In thousands)											
Debt securities:												
Puerto Rico Municipal Bonds	\$ 4,163	\$ 140	\$ 127,381	\$ 29,799	\$ 131,544	\$ 29,939						

Approximately 87% of the held-to-maturity municipal bonds were issued by five of the largest municipalities in Puerto Rico (San Juan, Carolina, Bayamon, Mayaguez and Guaynabo). These obligations typically are not issued in bearer form, nor are they registered with the SEC and are not rated by external credit agencies. In most cases, these bonds have priority over to the payment of operating costs and expenses of the municipality, which are required by law to levy special property taxes in such amounts as are required for the payment of all of their respective general obligation bonds and loans.

The Corporation determines the fair market value of Puerto Rico Municipal Bonds based on a discounted cash flow analysis using risk-adjusted discount rates. A security with similar characteristics traded in the open market is used as a proxy for each municipal bond. Then the cash flow is discounted at the average spread over the discount curve exhibited by the proxy security at the end of each quarter.

When evaluating if the decrease in fair value could be classified as other-than-temporary, management considered aspects such as the fact that all municipalities are current on their payments and the fact that the bonds are subject to periodic credit reviews and are supported by assigned property tax revenues.

Based on the quarterly analysis performed and the circumstances discussed above, management concluded that the unrealized loss is attributable to the time value of money and liquidity assumptions and no individual municipal bond was other-than-temporarily impaired as of June 30, 2016.

NOTE 5 – OTHER EQUITY SECURITIES

Institutions that are members of the FHLB system are required to maintain a minimum investment in FHLB stock. Such minimum investment is calculated as a percentage of aggregate outstanding mortgages, and an additional investment is required that is calculated as a percentage of total FHLB advances, letters of credit, and the collateralized portion of interest-rate swaps outstanding. The stock is capital stock issued at \$100 par value. Both stock and cash dividends may be received on FHLB stock.

As of June 30, 2016 and December 31, 2015, the Corporation had investments in FHLB stock with a book value of \$31.1 million and \$31.3 million, respectively. The net realizable value is a reasonable proxy for the fair value of these instruments. Dividend income from FHLB stock for the quarters ended June 30, 2016 and 2015 was \$0.4 million and \$0.3 million, respectively, and for the six-month periods ended June 30, 2016 and 2015 was \$0.7 million and \$0.6 million, respectively.

The shares of FHLB stock owned by the Corporation were issued by the FHLB of New York. The FHLB of New York is part of the Federal Home Loan Bank System, a national wholesale banking network of 12 regional, stockholder-owned congressionally chartered banks. The Federal Home Loan Banks are all privately capitalized and operated by their member stockholders. The system is supervised by the Federal Housing Finance Agency, which ensures that the Federal Home Loan Banks operate in a financially safe and sound manner, remain adequately capitalized and able to raise funds in the capital markets, and carry out their housing finance mission.

The Corporation has other equity securities that do not have a readily available fair value. The carrying value of such securities as of June 30, 2016 and December 31, 2015 was \$1.2 million and \$0.9 million, respectively.

NOTE 6 – LOANS HELD FOR INVESTMENT

The following table provides information about the loan portfolio held for investment:

		As of		As of
		June 30,		December 31,
		2016		2015
(In thousands)				

Residential mortgage loans, mainly secured by first mortgages	\$	3,323,844		\$	3,344,719
Commercial loans:					
Construction loans		137,406			156,195
Commercial mortgage loans		1,523,676			1,537,806
Commercial and Industrial loans (1)		2,133,623			2,246,513
Total commercial loans		3,794,705			3,940,514
Finance leases		230,025			229,165
Consumer loans		1,522,173			1,597,984
Loans held for investment		8,870,747			9,112,382
Allowance for loan and lease losses		(234,454)			(240,710)
Loans held for investment, net	\$	8,636,293		\$	8,871,672
	(1)	As of June 30, 2016 and December 31, 2015, includes \$1.0 billion of commercial loans that are secured by real estate but are not dependent upon the real estate for repayment.			

Loans held for investment on which accrual of interest income had been discontinued as of the indicated dates were as follows:					
(In thousands)		June 30,		December 31,	
		2016		2015	
Non-performing loans:					
Residential mortgage	\$	164,399		\$	169,001
Commercial mortgage		200,376			51,333
Commercial and Industrial		154,405			137,051
Construction:					
Land		11,889			12,174

Construction-residential		2,053			2,996
Consumer:					
Auto loans		14,260			17,435
Finance leases		2,111			2,459
Other consumer loans		10,094			10,858
Total non-performing loans held for investment (1) (2)(3)	\$	598,194		\$	442,773
(1)	As of June 30, 2016 and December 31, 2015, excludes \$8.1 million of non-performing loans held for sale.				
(2)	Amount excludes purchased-credit impaired ("PCI") loans with a carrying value of approximately \$169.7 million and \$173.9 million as of June 30, 2016 and December 31, 2015, respectively, primarily mortgage loans acquired from Doral Bank in the first quarter of 2015 and from Doral Financial in the second quarter of 2014, as further discussed below. These loans are not considered non-performing due to the application of the accretion method, under which these loans will accrete interest income over the remaining life of the loans using an estimated cash flow analysis.				
(3)	Non-performing loans exclude \$421.0 million and \$414.9 million of Troubled Debt Restructuring ("TDR") loans that are in compliance with modified terms and in accrual status as of June 30, 2016 and December 31, 2015, respectively.				

Loans in Process of Foreclosure

As of June 30, 2016, the recorded investment of residential mortgage loans collateralized by residential real estate property that are in the process of foreclosure amounted to \$144.1 million. The Corporation commences the foreclosure process on residential real estate loans when a borrower becomes 120 days delinquent in accordance with the guidelines of the Consumer Financial Protection Bureau (CFPB). Foreclosure procedures and timelines vary depending on whether the property is located in a judicial or non-judicial state. Judicial states (Puerto Rico) require the foreclosure to be processed through the state's court while foreclosures in non-judicial states are processed without court intervention. Foreclosure timelines vary according to state law and Investor Guidelines. Occasionally, foreclosures may be delayed due to mandatory mediations, bankruptcy proceedings, court delays and title issues, among other reasons.

Adoption of new accounting requirements and recently issued but not yet effective accounting requirements

The Corporation's aging of the loans held for investment portfolio is as follows:									
As of June 30, 2016 (In thousands)	30-59 Days Past Due	60-89 Days Past Due	90 days or more Past Due (1)	Total Past Due	Purchased Credit-Impaired Loans	Current	Total loans held for investment	90 days past due and still accruing (2)

Commercial and Industrial	140,827		71,341		354		212,522		2,407,996	
(1)	Excludes \$8.1 million as of June 30, 2016 and December 31, 2015, of construction-land non-performing loans held for sale.									

The Corporation considers a loan as adversely classified if its risk rating is Substandard, Doubtful or Loss. These categories are defined as follows:

Adoption of new accounting requirements and recently issued but not yet effective accounting requirements

Substandard- A Substandard asset is inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the institution will sustain some loss if the deficiencies are not corrected.

Doubtful- Doubtful classifications have all the weaknesses inherent in those classified Substandard with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently known facts, conditions and values, highly questionable and improbable. A Doubtful classification may be appropriate in cases where significant risk exposures are perceived, but loss cannot be determined because of specific reasonable pending factors which may strengthen the credit in the near term.

Loss- Assets classified Loss are considered uncollectible and of such little value that their continuance as bankable assets is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value, but rather that it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be affected in the future. There is little or no prospect for near term improvement and no realistic strengthening action of significance pending.

Interest income of approximately \$8.9 million (\$6.1 million accrual basis and \$2.8 million cash basis) and \$18.1 million (\$12.1 million accrual basis and \$6.0 million cash basis) was recognized on impaired loans for the second quarter and six-month period ended June 30, 2015, respectively.

PCI Loans

The Corporation acquired PCI loans accounted for under ASC 310-30 as part of the transaction closed on February 27, 2015 in which FirstBank acquired 10 Puerto Rico branches of Doral Bank, and acquired certain assets, including PCI loans, and assumed deposits, through an alliance with Banco Popular of Puerto Rico, which was the successful lead bidder with the FDIC on the failed Doral Bank, as well as other co-bidders. The Corporation also acquired PCI loans in previously completed asset acquisitions that are accounted for under ASC 310-30. These previous transactions include the acquisition from Doral Financial in the second quarter of 2014 of all its rights, title and interest in first and second residential mortgages loans in full satisfaction of secured borrowings owed by such entity to FirstBank, and the acquisition in 2012 of a FirstBank-branded credit card loans portfolio from FIA Card Services (“FIA”).

Under ASC 310-30, the acquired PCI loans were aggregated into pools based on similar characteristics (i.e. delinquency status, loan terms). Each loan pool is accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows. Since the loans are accounted for by the Corporation under ASC 310-30, they are not considered non-performing and will continue to have an accretable yield as long as there is a reasonable expectation about the timing and amount of cash flows expected to be collected. The Corporation recognizes additional losses on this portfolio when it is probable that the Corporation will be unable to collect all cash flows expected as of the acquisition date plus additional cash flows expected to be collected arising from changes in estimates after the acquisition date.

The carrying amount of PCI loans follows:				
	June 30, 2016		December 31, 2015	
(In thousands)				
Residential mortgage loans	\$	166,556	\$	170,766
Commercial mortgage loans		3,134		3,147
Total PCI loans	\$	169,690	\$	173,913
Allowance for loan losses		(6,857)		(3,962)
Total PCI loans, net of allowance for loan losses	\$	162,833	\$	169,951

The following tables present PCI loans by past due status as of June 30, 2016 and December 31, 2015:												
As of June 30, 2016 (In thousands)	30-59 Days		60-89 Days		90 days or more		Total Past Due		Current		Total PCI loans	
		\$	-	\$	12,354	\$	25,546	\$	37,900	\$	128,656	\$

Initial Fair Value and Accrutable Yield of PCI Loans

At acquisition, the Corporation estimated the cash flows the Corporation expected to collect on PCI loans. Under the accounting guidance for PCI loans, the difference between the contractually required payments and the cash flows expected to be collected at acquisition is referred to as the non-accrutable difference. This difference is neither accreted into income nor recorded on the Corporation's consolidated statement of financial condition. The excess of cash flows expected to be collected over the estimated fair value is referred to as the accrutable yield and is recognized in interest income over the remaining life of the loans, using the effective-yield method.

Changes in accrutable yield of acquired loans

Subsequent to an acquisition of loans, the Corporation is required to periodically evaluate its estimate of cash flows expected to be collected. These evaluations, performed quarterly, require the continued use of key assumptions and estimates, similar to the initial estimate of fair value. Subsequent changes in the estimated cash flows expected to be collected may result in changes in the accrutable yield and non-accrutable difference or reclassifications from nonaccrutable yield to accrutable yield. Increases in the cash flows expected to be collected will generally result in an increase in interest income over the remaining life of the loan or pool of loans. Decreases in expected cash flows due to further credit deterioration will generally result in an impairment charge recognized in the Corporation's provision for loan and lease losses, resulting in an increase to the allowance for loan losses. During the first half of 2016, the Corporation increased by \$2.9 million to \$6.9 million the reserve related to PCI loans acquired from Doral Financial in 2014. The reserve is driven by the revisions to the expected cash flows of the portfolio for the remaining term of the loan pool based on expected performance and market conditions.

Changes in the accrutable yield of PCI loans for the quarters and six-month periods ended June 30, 2016 and 2015 were as follows:										
	Quarter ended				Six-month period ended					
	June 30, 2016		June 30, 2015		June 30, 2016			June 30, 2015

Balance at end of period		\$	6,857	\$	3,164	\$	6,857	\$	3,164		

The outstanding principal balance of PCI loans, including amounts charged off by the Corporation, amounted to \$212.7 million as of June 30, 2016 (December 2015 - \$218.1 million).

Purchases and Sales of Loans

During the first half of 2016, the Corporation purchased \$42.1 million of residential mortgage loans consistent with a strategic program established by the Corporation in 2005 to purchase ongoing residential mortgage loan production from mortgage bankers in Puerto Rico. Generally, the loans purchased from mortgage bankers were conforming residential mortgage loans. Purchases of conforming residential mortgage loans provide the Corporation the flexibility

Adoption of new accounting requirements and recently issued but not yet effective accounting requirements

to retain or sell the loans, including through securitization transactions, depending upon the Corporation's interest rate risk management strategies. When the Corporation sells such loans, it generally keeps the servicing of the loans.

In the ordinary course of business, the Corporation sells residential mortgage loans (originated or purchased) to GNMA and government-sponsored entities ("GSEs") such as Fannie Mae ("FNMA") and Freddie Mac ("FHLMC"), which generally securitize the transferred loans into mortgage-backed securities for sale into the secondary market. The Corporation sold approximately \$72.8 million of performing residential mortgage loans to FNMA and FHLMC during the first half of 2016. Also, during the first half of 2016, the Corporation sold \$146.3 million of FHA/VA mortgage loans to GNMA, which packages them into mortgage-backed securities. The Corporation's continuing involvement in these loan sales consists primarily of servicing the loans. In addition, the Corporation agreed to repurchase loans when it breaches any of the representations and warranties included in the sale agreement. These representations and warranties are consistent with the GSEs' selling and servicing guidelines (i.e., ensuring that the mortgage was properly underwritten according to established guidelines).

For loans sold to GNMA, the Corporation holds an option to repurchase individual delinquent loans issued on or after January 1, 2003 when the borrower fails to make any payment for three consecutive months. This option gives the Corporation the ability, but not the obligation, to repurchase the delinquent loans at par without prior authorization from GNMA.

Under ASC Topic 860, *Transfer and Servicing*, once the Corporation has the unilateral ability to repurchase the delinquent loan, it is considered to have regained effective control over the loan and is required to recognize the loan and a corresponding repurchase liability on the balance sheet regardless of the Corporation's intent to repurchase the loan.

During the first half of 2016 and 2015, the Corporation repurchased pursuant to its repurchase option with GNMA \$14.6 million and \$6.3 million, respectively, of loans previously sold to GNMA. The principal balance of these loans is fully guaranteed and the risk of

loss related to the repurchased loans is generally limited to the difference between the delinquent interest payment advanced to GNMA computed at the loan's interest rate and the interest payments reimbursed by FHA, which are computed at a pre-determined debenture rate. Repurchases of GNMA loans allow the Corporation, among other things, to maintain acceptable delinquency rates on outstanding GNMA pools and remain as a seller and servicer in good standing with GNMA. The Corporation generally remediates any breach of representations and warranties related to the underwriting of such loans according to established GNMA guidelines without incurring losses. The Corporation does not maintain a liability for estimated losses as a result of breaches in representations and warranties.

Loan sales to FNMA and FHLMC are without recourse in relation to the future performance of the loans. The Corporation repurchased at par loans previously sold to FNMA and FHLMC in the amount of \$0.7 million and \$0.5 million during the first half of 2016 and 2015, respectively. The Corporation's risk of loss with respect to these loans is also minimal as these repurchased loans are generally performing loans with documentation deficiencies. No losses related to breaches of representations and warranties were incurred in the first half of 2016. Historically, losses experienced on these loans have been immaterial. As a consequence, as of June 30, 2016, the Corporation does not maintain a liability for estimated losses on loans expected to be repurchased as a result of breaches in loan and servicer representations and warranties.

Bulk Sale of Assets

During the second quarter of 2015, the Corporation completed the sale of commercial and construction loans with a book value of \$147.5 million (\$90.7 million of commercial mortgage loans, \$45.8 million of commercial and industrial loans, and \$11.0 million of construction loans), comprised mostly of non-performing and adversely classified loans, as well as other real estate owned ("OREO") with a book value of \$2.9 million, in a cash transaction. The sales price of this bulk sale was \$87.3 million. Approximately \$15.3 million of reserves had been allocated to the loans. This transaction resulted in total charge-offs of \$61.4 million and an incremental pre-tax loss of \$48.7 million, including \$0.9 million in professional service fees directly attributable to the bulk sale.

Loan Portfolio Concentration

The Corporation's primary lending area is Puerto Rico. The Corporation's banking subsidiary, First Bank, also lends in the USVI and BVI markets and in the United States (principally in the state of Florida). Of the total gross loans held for investment of \$8.9 billion as of June 30, 2016, approximately 80% have credit risk concentration in Puerto Rico, 13% in the United States, and 7% in the USVI and BVI.

As of June 30, 2016, the Corporation had \$145.9 million of credit facilities extended to the Puerto Rico government, its municipalities, and public corporations, of which \$138.1 million was outstanding (book value of

Adoption of new accounting requirements and recently issued but not yet effective accounting requirements

\$131.7 million), compared to \$153.2 million outstanding as of December 31, 2015. In addition, the outstanding balance of credit facilities granted to the government of the Virgin Islands amounted to \$64.8 million as of June 30, 2016, compared to \$126.2 million as of December 31, 2015. Approximately \$91.9 million of the granted credit facilities outstanding (\$85.6million book value) consisted of loans to public corporations, including a direct exposure to the Puerto Rico Electric Power Authority (“PREPA”) with a book value of \$68.3 million as of June 30, 2016, and approximately \$9.7 million consisted of loans to units of the Puerto Rico central government. The PREPA credit facility was placed in non-accrual status in the first quarter of 2015 and interest payments are recorded on a cost-recovery basis. In addition, the Corporation had \$36.5 million of loans extended to municipalities in Puerto Rico, which in most cases are supported by assigned property tax revenues. Municipalities’ revenues are independent of the Puerto Rico central government. These municipalities are required by law to levy special property taxes in such amounts as are required for the payment of all of their respective general obligation bonds and loans. Late in 2015, the GDB and the Municipal Revenue Collection Center (CRIM) signed a deed of trust. Through this deed, the GDB, as fiduciary, is bound to keep the CRIM funds separate from any other deposits and must distribute the funds pursuant to the applicable law.

Furthermore, as of June 30, 2016, the Corporation had \$127.3 million in financings to the hotel industry in Puerto Rico where the borrower and the operations of the underlying collateral are the primary sources of repayment and the Puerto Rico Tourism Development Fund (“TDF”) provides a secondary guarantee for payment performance, compared to \$129.4 million as of December 31, 2015. This exposure, consisting of three facilities, was placed in non-accrual status and classified as impaired in the first quarter of 2016 and interest payments are now applied against principal. Approximately \$1.0 million of interest payments received on loans guaranteed by the TDF since late March 2016 have been applied against principal. The TDF is a subsidiary of the GDB that facilitates private sector financings to Puerto Rico’s hotel industry. Recent developments related to the Puerto Rico government’s fiscal situation introduced additional uncertainty regarding the TDF’s ability to honor its guarantee, including the enactment of the Puerto Rico Emergency Moratorium and Financial Rehabilitation Act (“Act 21”), which gives Puerto Rico’s governor emergency powers to deal with Puerto Rico’s challenging fiscal situation, including the ability to declare a moratorium on all bonds and other payments. On June 30, 2016, pursuant to Act 21, the Puerto Rico governor ordered a moratorium on the payment of \$780 million of the Puerto Rico Government’s general obligations and the debt of certain other instrumentalities due on July 1, 2016. This followed a default on the principal payment of \$367 million of GDB notes due on May 1, 2016. Puerto Rico’s governor also issued an executive order intended to protect the GDB’s liquidity by allowing withdrawals only to fund necessary costs for essential services such as health, public safety and education services. Recently, the GDB defaulted on a \$28 million payment of interest due to its creditors on August 1, 2016,

including interest due on GDB bonds held by the Corporation. The Corporation's collections of principal and interest from the TDF in the first half of 2016 amounted to \$0.6 million compared to \$5.3 million in the entire year 2015. These loans have been adversely classified since the third quarter of 2015.

The general reserve for commercial loans was increased in the fourth quarter of 2015 due to qualitative factors that stressed the historical loss rates applied to the Puerto Rico Government-related exposure, including the TDF-guaranteed portfolio. The migration of the loans guaranteed by the TDF to non-accrual status and impaired classification in the first quarter of 2016 did not result in a significant increase to the allowance for loan losses. As of June 30, 2016, the total reserve coverage ratio related to commercial loans extended to or guaranteed by the Puerto Rico Government (excluding municipalities) was 19.5%.

In addition, the Corporation had \$122.7 million in indirect exposure to residential mortgage loans that are guaranteed by the Puerto Rico Housing Finance Authority. Residential mortgage loans guaranteed by the Puerto Rico Housing Finance Authority are secured by the underlying properties and the guarantees serve to cover shortfalls in collateral in the event of a borrower default. The Puerto Rico government guarantees up to \$75 million of the principal insured by the mortgage loans insurance program. According to the most recently released audited financial statements of the Puerto Rico Housing Financing Authority, as of June 30, 2015, the Puerto Rico Housing Finance Authority's mortgage loans insurance program covered loans aggregating approximately \$552 million. The regulations adopted by the Puerto Rico Housing Finance Authority require the establishment of adequate reserves to guarantee the solvency of the mortgage loans insurance fund. As of June 30, 2015, the Puerto Rico Housing Finance Authority had a restricted net position for such purposes of approximately \$77.4 million.

The Corporation cannot predict at this time the impact that the current fiscal situation of the Commonwealth of Puerto Rico, including the payment defaults on certain bonds, the uncertainty about the debt restructuring process, and the various legislative and other measures adopted and to be adopted by the Puerto Rico government in response to such fiscal situation, will have on the Puerto Rico economy and on the Corporation's financial condition and results of operations.

Troubled Debt Restructurings

The Corporation provides homeownership preservation assistance to its customers through a loss mitigation program in Puerto Rico that is similar to the U.S. government's Home Affordable Modification Program guidelines. Depending upon the nature of borrowers' financial condition, restructurings or loan modifications through this program as well as other restructurings of individual commercial, commercial mortgage, construction, and residential mortgage loans in the U.S. mainland fit the definition of a TDR. A restructuring of a debt constitutes a TDR if the creditor for economic or legal reasons related to the debtor's financial difficulties grants a concession to the debtor that it would not

otherwise consider. Modifications involve changes in one or more of the loan terms that bring a defaulted loan current and provide sustainable affordability. Changes may include the refinancing of any past-due amounts, including interest and escrow, the extension of the maturity of the loan and modifications of the loan rate. As of June 30, 2016, the Corporation's total TDR loans held for investment of \$671.0 million consisted of \$381.8 million of residential mortgage loans, \$160.9 million of commercial and industrial loans, \$45.0 million of commercial mortgage loans, \$41.7 million of construction loans, and \$41.7 million of consumer loans. Outstanding unfunded commitments on TDR loans amounted to \$8.0 million as of June 30, 2016.

The Corporation's loss mitigation programs for residential mortgage and consumer loans can provide for one or a combination of the following: movement of interest past due to the end of the loan, extension of the loan term, deferral of principal payments and reduction of interest rates either permanently or for a period of up to four years (increasing back in step-up rates). Additionally, in certain cases, the restructuring may provide for the forgiveness of contractually due principal or interest. Uncollected interest is added to the end of the loan term at the time of the restructuring and not recognized as income until collected or when the loan is paid off. These programs are available only to those borrowers who have defaulted, or are likely to default, permanently on their loan and would lose their homes in a foreclosure action absent some lender concession. Nevertheless, if the Corporation is not reasonably assured that the borrower will comply with its contractual commitment, properties are foreclosed.

Prior to permanently modifying a loan, the Corporation may enter into trial modifications with certain borrowers. Trial modifications generally represent a six-month period during which the borrower makes monthly payments under the anticipated modified payment terms prior to a formal modification. Upon successful completion of a trial modification, the Corporation and the borrower enter into a permanent modification. TDR loans that are participating in or that have been offered a binding trial modification are classified as TDRs when the trial offer is made and continue to be classified as TDRs regardless of whether the borrower enters into a permanent modification. As of June 30, 2016, we classified an additional \$8.3 million of residential mortgage loans as TDRs that were participating in or had been offered a trial modification.

For the commercial real estate, commercial and industrial, and construction loan portfolios, at the time of a restructuring, the Corporation determines, on a loan-by-loan basis, whether a concession was granted for economic or legal reasons related to the borrower's financial difficulty. Concessions granted for commercial loans could include: reductions in interest rates to rates that are considered below market; extension of repayment schedules and maturity dates beyond original contractual terms; waivers of borrower covenants; forgiveness of principal or interest; or other contractual changes that would be considered a concession. The Corporation mitigates loan defaults for its commercial loan portfolios through its collection function. The function's objective is to

minimize both early stage delinquencies and losses upon default of commercial loans. In the case of the commercial and industrial, commercial mortgage, and construction loan portfolios, the Corporation's Special Asset Group ("SAG") focuses on strategies for the accelerated reduction of non-performing assets through note sales, short sales, loss mitigation programs, and sales of OREO. In addition to the management of the resolution process for problem loans, the SAG oversees collection efforts for all loans to prevent migration to the non-performing and/or adversely classified status. The SAG utilizes relationship officers, collection specialists, and attorneys. In the case of residential construction projects, the workout function monitors project specifics, such as project management and marketing, as deemed necessary. The SAG utilizes its collections infrastructure of workout collection officers, credit work-out specialists, in-house legal counsel, and third-party consultants. In the case of residential construction projects and large commercial loans, the SAG function also utilizes third-party specialized consultants to monitor the residential and commercial construction projects in terms of construction, marketing and sales, and to assist with the restructuring of large commercial loans.

In addition, the Corporation extends, renews, and restructures loans with satisfactory credit profiles. Many commercial loan facilities are structured as lines of credit, which are mainly one year in term and, therefore, are required to be renewed annually. Other facilities may be restructured or extended from time to time based upon changes in the borrower's business needs, use of funds, timing of completion of projects, and other factors. If the borrower is not deemed to have financial difficulties, extensions, renewals, and restructurings are done in the normal course of business and are not considered to be concessions, and the loans continue to be recorded as performing.

Selected information on TDRs that includes the recorded investment by loan class and modification type is summarized in the following tables. This information reflects all TDRs:													
June 30, 2016

(1)	Includes \$45.3 million of charge offs related to TDRs included in the bulk sale of assets completed in the second quarter of 2015.										

TDR loans are classified as either accrual or nonaccrual loans. Loans in accrual status may remain in accrual status when their contractual terms have been modified in a TDR if the loan had demonstrated performance prior to the restructuring and payment in full under the restructured terms is expected. Otherwise, loans on non-accrual and restructured as a TDR will remain on nonaccrual status until the borrower has proven the ability to perform under the modified structure, generally for a minimum of six months, and there is evidence that such payments can and are likely to continue as agreed. Performance prior to the restructuring, or significant events that coincide with the restructuring, are included in assessing whether the borrower can meet the new terms and may result in the loan being returned to accrual status at the time of the restructuring or after a shorter performance period. If the borrower's ability to meet the revised payment schedule is uncertain, the loan remains classified as a non-accrual loan. Loan modifications increase the Corporation's interest income by returning a non-performing loan to performing status, if applicable, increase cash flows by providing for payments to be made by the borrower, and limit increases in foreclosure and OREO costs. The Corporation continues to consider a modified loan as an impaired loan for purposes of estimating the allowance for loan and lease losses. A TDR loan that specifies an interest rate that at the time of the restructuring is greater than or equal to the rate the Corporation is willing to accept for a new loan with comparable risk may not be reported as a TDR, or an impaired loan in the calendar years subsequent to the restructuring, if it is in compliance with its modified terms. During the first half of 2016, the Corporation removed a \$3.0 million loan from the TDR classification as the borrower is no longer experiencing financial difficulties and the loan was refinanced at market terms and does not contain any concession to the borrower.

The following table provides a breakdown between accrual and nonaccrual status of TDR loans:									
(In thousands)									
As of June 30, 2016									
		Accrual			Nonaccrual (1)			Total TDRs	
Non-FHA/VA Residential Mortgage loans	\$	301,318		\$	80,440		\$	381,758	
Commercial Mortgage Loans		29,915			15,114			45,029	
Commercial and Industrial Loans		57,991			102,873			160,864	
Construction Loans:									
Land		909			1,795			2,704	
Construction-commercial		-			38,607			38,607	
Construction-residential		-			357			357	
Consumer Loans - Auto		16,320			8,050			24,370	
Finance Leases		2,244			68			2,312	
Consumer Loans - Other		12,275			2,715			14,990	
Total Troubled Debt Restructurings	\$	420,972		\$	250,019		\$	670,991	
(1) Included in non-accrual loans are \$120.3 million in loans that are performing under the terms of the restructuring agreement but are reported in non-accrual status until the restructured loans meet the criteria of sustained payment performance under the revised terms for reinstatement to accrual status and are deemed fully collectible.									

(In thousands)									
As of December 31, 2015									
		Accrual			Nonaccrual (1)			Total TDRs	
Non- FHA/VA Residential Mortgage loans	\$	303,885		\$	78,787		\$	382,672	
Commercial Mortgage Loans		29,121			15,377			44,498	
Commercial and Industrial Loans		48,392			101,862			150,254	
Construction Loans:									
Land		924			1,842			2,766	
Construction-commercial		-			39,466			39,466	
Construction-residential		3,046			436			3,482	
Consumer Loans - Auto		14,823			6,759			21,582	
Finance Leases		1,980			97			2,077	
Consumer Loans - Other		12,737			2,057			14,794	
Total Troubled Debt Restructurings	\$	414,908		\$	246,683		\$	661,591	

(1)	Included in non-accrual loans are \$118.2 million in loans that are performing under the terms of the restructuring agreement but are reported in non-accrual status until the restructured loans meet the criteria of sustained payment performance under the revised terms for reinstatement to accrual status and there is no doubt about full collectability.
-----	---

TDR loans exclude restructured residential mortgage loans that are guaranteed by the U.S. federal government (i.e., FHA/VA loans) totaling \$70.9 million as of June 30, 2016 (December 31, 2015 - \$77.6 million). The Corporation excludes FHA/VA guaranteed loans from TDR loans statistics given that, in the event that the borrower defaults on the loan, the principal and interest (at the specified debenture rate) are guaranteed by the U.S. government; therefore, the risk of loss on these types of loans is very low. The Corporation does not consider loans with U.S. federal government guarantees to be impaired loans for the purpose of calculating the allowance for loan and lease losses.

Loan modifications that are considered TDRs completed during the quarter and six-month period ended June 30, 2016 and 2015 were as follows:

(Dollars in thousands)	Quarter ended June 30, 2016

Recidivism, or the borrower defaulting on its obligation pursuant to a modified loan, results in the loan once again becoming a non-performing loan. Recidivism occurs at a notably higher rate than do defaults on new origination loans, so modified loans present a higher risk of loss than do new origination loans. The Corporation considers a loan to have defaulted if the borrower has failed to make payments of either principal, interest, or both for a period of 90 days or more.

Loan modifications considered TDR loans that defaulted during the quarters and six-month periods ended June 30, 2016 and June 30, 2015 and had become TDR during the 12-months preceding the default date were as follows:

(Dollars in thousands)	Quarter ended June 30,

For certain TDR loans, the Corporation splits the loans into two new notes, A and B notes. The A note is restructured to comply with the Corporation's lending standards at current market rates, and is tailored to suit the customer's ability to make timely interest and principal payments. The B note includes the granting of the concession to the borrower and varies by situation. The B note is charged off but the obligation is not forgiven to the borrower, and any payments collected are accounted for as recoveries. At the time of the restructuring, the A note is identified and classified as a TDR loan. If the loan performs for at least six months according to the modified terms, the A note may be returned to accrual status. The borrower's payment performance prior to the restructuring is included in assessing whether the borrower can meet the new terms and may result in the loan being returned to accrual status at the time of the restructuring. In the periods following the calendar year in which a loan was restructured, the A note may no longer be reported as a TDR loan if it is in accrual status, is in compliance with its modified terms, and yields a market rate (as determined and documented at the time of the restructuring).

The recorded investment in loans held for investment restructured using the A/B note restructure workout strategy was approximately \$38.3 million as of June 30, 2016. The following table provides additional information about the volume of this type of loan restructuring and the effect on the allowance for loan and lease losses in the first six months of 2016 and 2015:

	June 30, 2016		June 30, 2015	
(In thousands)				
Principal balance deemed collectible at end of period	\$	38,259	\$	41,000
Amount charged off	\$	-	\$	-
Charges (reductions) to the provision for loan losses	\$	1,948	\$	(62)
Allowance for loan losses at end of period	\$	2,809	\$	669

Of the loans comprising the \$38.3 million that have been deemed collectible, approximately \$38.1 million were placed in accrual status as the borrowers have exhibited a period of sustained performance. These loans continue to be individually evaluated for impairment purposes.

NOTE 7 – ALLOWANCE FOR LOAN AND LEASE LOSSES

The changes in the allowance for loan and lease losses were as follows:

Total	\$	139,159	\$	146,801
(1)	Excludes \$13.0 million and \$8.9 million as of June 30, 2016 and December 31, 2015, respectively, of foreclosures that meet the conditions of ASC 310-40 and are presented as a receivable (other assets) in the statement of financial condition.			

NOTE 10 – DERIVATIVE INSTRUMENTS AND HEDGING ACTIVITIES

Adoption of new accounting requirements and recently issued but not yet effective accounting requirements

One of the market risks facing the Corporation is interest rate risk, which includes the risk that changes in interest rates will result in changes in the value of the Corporation's assets or liabilities and the risk that net interest income from its loan and investment portfolios will be adversely affected by changes in interest rates. The overall objective of the Corporation's interest rate risk management activities is to reduce the variability of earnings caused by changes in interest rates.

The Corporation designates a derivative as a fair value hedge, cash flow hedge or economic undesignated hedge when it enters into the derivative contract. As of June 30, 2016 and December 31, 2015, all derivatives held by the Corporation were considered economic undesignated hedges. These undesignated hedges are recorded at fair value with the resulting gain or loss recognized in current earnings.

The following summarizes the principal derivative activities used by the Corporation in managing interest rate risk:

Interest rate cap agreements - Interest rate cap agreements provide the right to receive cash if a reference interest rate rises above a contractual rate. The value increases as the reference interest rate rises. The Corporation enters into interest rate cap agreements for protection from rising interest rates.

Forward Contracts - Forward contracts are sales of to-be-announced ("TBA") mortgage-backed securities that will settle over the standard delivery date and do not qualify as "regular way" security trades. Regular-way security trades are contracts that have no net settlement provision and no market mechanism to facilitate net settlement and that provide for delivery of a security within the time frame generally established by regulations or conventions in the market place or exchange in which the transaction is being executed. The forward sales are considered derivative instruments that need to be marked to market. These securities are used to economically hedge the FHA/VA residential mortgage loan securitizations of the mortgage-banking operations. Unrealized gains (losses) are recognized as part of mortgage banking activities in the consolidated statement of income.

To satisfy the needs of its customers, the Corporation may enter into non-hedging transactions. On these transactions, generally, the Corporation generally participates as a buyer in one of the agreements and as a seller in the other agreement under the same terms and conditions.

In addition, the Corporation enters into certain contracts with embedded derivatives that do not require separate accounting as these are clearly and closely related to the economic characteristics of the host contract. When the embedded derivative possesses economic characteristics that are not clearly and closely related to the economic characteristics of the host contract, it is bifurcated, carried at fair value, and designated as a trading or non-hedging derivative instrument.

The following table summarizes the notional amounts of all derivative instruments:				
Notional Amounts (1)				
	As of June 30, 2016		As of December 31, 2015	
(In thousands)				
Undesignated economic hedges:				
Interest rate contracts:

Undesignated economic hedges:															
Interest rate contracts:															
Written and purchased interest rate cap agreements	Interest income - Loans	\$	(3)	\$	-	\$	(7)	\$	-	\$	(7)	\$	-	\$	-
Forward contracts:															
Sales of TBA GNMA MBS pools	Mortgage banking activities		(87)		254		(236)		182		(236)		182		
Total (loss) gain on derivatives		\$	(90)	\$	254	\$	(243)	\$	182	\$	(243)	\$	182		

Derivative instruments are subject to market risk. As is the case with investment securities, the market value of derivative instruments is largely a function of the financial market's expectations regarding the future direction of interest rates. Accordingly, current market values are not necessarily indicative of the future impact of derivative instruments on earnings. This will depend, for the most part, on the shape of the yield curve, the level of interest rates, as well as the expectations for rates in the future.

NOTE 12 – GOODWILL AND OTHER INTANGIBLES

Goodwill as of June 30, 2016 and December 31, 2015 amounted to \$28.1 million, recognized as part of “Other Assets” in the consolidated statement of financial condition. The Corporation conducted its annual evaluation of goodwill and intangibles during the fourth quarter of 2015. The Corporation’s goodwill is related to the acquisition of FirstBank Florida in 2005.

There have been no events related to the Florida reporting unit that could indicate potential goodwill impairment since the date of the last evaluation; therefore, no goodwill impairment evaluation was performed during the first half of 2016. Goodwill and other indefinite life intangibles are reviewed at least annually for impairment.

In connection with the acquisition of the FirstBank-branded credit card loan portfolio in the second quarter of 2012, the Corporation recognized a purchased credit card relationship intangible of \$24.5 million, which is being amortized over the remaining estimated life of 5.4 years on an accelerated basis based on the estimated attrition rate of the purchased credit card accounts, which reflects the pattern in which the economic benefits of the intangible asset are consumed. These benefits are consumed as the revenue stream generated by the cardholder relationship is realized.

The core deposit intangible acquired in the February 2015 Doral Bank transaction amounted to \$5.8 million (\$4.7 million as of June 30, 2016).

In the first quarter of 2016, FirstBank Insurance Agency acquired certain insurance customer accounts and related customer records and recognized an insurance customer relationship intangible of \$1.1 million (\$1.0 million as of June 30, 2016), which is being amortized over the next 6.6 years on a straight-line basis. The list of accounts acquired has a direct relationship to the previous mortgage loan portfolio acquisitions from Doral Bank and Doral Financial in 2015 and 2014.

The following table shows the gross amount and accumulated amortization of the Corporation’s intangible assets recognized as part of Other Assets in the consolidated statement of financial condition:					
	As of			As of	
	June 30,			December 31,	
	2016			2015	
(Dollars in thousands)					
Core deposit intangible:					
Gross amount, beginning of period	\$		51,664	\$	45,844

Adoption of new accounting requirements and recently issued but not yet effective accounting requirements

Addition as a result of acquisition		-			5,820
Accumulated amortization		(43,482)			(42,498)
Net carrying amount	\$	8,182		\$	9,166
Remaining amortization period		8.5 years			9.0 years
Purchased credit card relationship intangible:					
Gross amount	\$	24,465		\$	24,465
Accumulated amortization		(12,540)			(11,146)
Net carrying amount	\$	11,925		\$	13,319
Remaining amortization period		5.4 years			5.8 years
Insurance Customer relationship intangible:					
Gross amount	\$	1,067		\$	-
Accumulated amortization		(64)			-
Net carrying amount	\$	1,003		\$	-
Remaining amortization period		6.6 years			-

For the quarter and six-month period ended June 30, 2016, the amortization expense of core deposit intangibles amounted to \$0.5 million and \$ 1.0 million, respectively, (2015 - \$0.6 million and \$1.0 million, respectively). For the quarter and six-month period ended June 30, 2016, the amortization expense of the purchased credit card relationship intangible amounted to \$0.7 million and \$1.4 million, respectively, (2015 - \$0.8 million and \$1.5 million, respectively). For the quarter and six-month period ended June 30, 2016, the amortization expense of insurance customer relationship intangible amounted to \$39 thousand and \$64 thousand, respectively.

The estimated aggregate amortization expense related to these intangible assets for future periods is as follows:			
			Amount
			(In thousands)
	2016	\$	2,453
	2017		4,495
	2018		3,519
	2019		3,067
	2020		2,851
	2021 and after		4,725

NOTE 13 – NON CONSOLIDATED VARIABLE INTEREST ENTITIES AND SERVICING ASSETS

The Corporation transfers residential mortgage loans in sale or securitization transactions in which it has continuing involvement, including servicing responsibilities and guarantee arrangements. All such transfers have been accounted for as sales as required by applicable accounting guidance.

When evaluating the need to consolidate counterparties to which the Corporation has transferred assets or with which the Corporation has entered into other transactions, the Corporation first determines if the counterparty is an entity for which a variable interest exists. If no scope exception is applicable and a variable interest exists, the Corporation then evaluates if it is the primary beneficiary of the VIE and whether the entity should be consolidated or not.

Below is a summary of transfers of financial assets to VIEs for which the Corporation has retained some level of continuing involvement:

GNMA

The Corporation typically transfers first lien residential mortgage loans in conjunction with GNMA securitization transactions in which the loans are exchanged for cash or securities that are readily redeemed for cash proceeds and servicing rights. The securities issued through these transactions are guaranteed by the issuer and, as such, under seller/servicer agreements, the Corporation is required to service the loans in accordance with the issuers' servicing guidelines and standards. As of June 30, 2016, the Corporation serviced loans securitized through GNMA with a principal balance of \$1.4 billion.

Trust-Preferred Securities

In 2004, FBP Statutory Trust I, a financing trust that is wholly owned by the Corporation, sold to institutional investors \$100 million of its variable rate trust-preferred securities. The proceeds of the issuance, together with the proceeds of the purchase by the Corporation of \$3.1 million of FBP Statutory Trust I variable rate common securities, were used by FBP Statutory Trust I to purchase \$103.1 million aggregate principal amount of the Corporation's Junior Subordinated Deferrable Debentures. Also in 2004, FBP Statutory Trust II, a financing trust that is wholly owned by the Corporation, sold to institutional investors \$125 million of its variable rate trust-preferred securities. The proceeds of the issuance, together with the proceeds of the purchase by the Corporation of \$3.9 million of FBP Statutory Trust II variable rate common securities, were used by FBP Statutory Trust II to purchase \$128.9 million aggregate principal amount of the Corporation's Junior Subordinated Deferrable Debentures. The debentures are presented in the Corporation's consolidated statement of financial condition as Other Borrowings, net of related issuance costs. The variable rate trust-preferred securities are fully and unconditionally guaranteed by the Corporation. The Junior Subordinated Deferrable Debentures issued by the Corporation in April 2004 and in September 2004 mature on June 17, 2034 and September 20, 2034, respectively; however, under certain circumstances, the maturity of Junior Subordinated Deferrable Debentures may be shortened (such shortening would result in a mandatory redemption of the variable rate trust-preferred securities). During the first quarter of 2016, the Corporation completed the repurchase of \$10 million in trust-preferred securities of the FBP Statutory Trust II that were auctioned in a public sale at which the Corporation was invited to participate. The Corporation repurchased and cancelled the repurchased trust preferred securities, resulting in a commensurate reduction in the related Floating Rate Junior Subordinated Debentures. The Corporation's winning bid equated to 70% of the \$10 million par value. The 30% discount, plus accrued interest, resulted in a gain of approximately \$4.2 million, which is reflected in the statement of income as a "Gain on early extinguishment of debt." During the second quarter of 2015, the Corporation issued 852,831 shares of the Corporation's common stock in exchange for \$5.3 million of trust preferred securities (FBP Statutory Trust I), which enabled the Corporation to cancel \$5.5 million of the carrying value of the debentures underlying the purchased trust preferred securities. The Collins Amendment to the Dodd-Frank Wall Street Reform and Consumer Protection Act eliminates certain trust-preferred securities from Tier 1 Capital; however, these instruments may remain in Tier 2 capital until the instruments are redeemed or mature. Under the indentures, the Corporation has the right, from time to time, and without causing an event of default, to defer payments of interest on the Junior Subordinated Debentures by extending the interest payment period at any time and from time to time during the term of the subordinated debentures for up to twenty consecutive quarterly periods. During the second quarter of 2016, the Corporation received approval from the Federal Reserve and paid \$31.2

million for all the accrued but deferred interest payments plus the interest for the second quarter on the Corporation's subordinated debentures associated with its trust preferred securities. As of June 30, 2016, the Corporation is current on all interest payments due related to its subordinated debt. Future interest payments are subject to the Federal Reserve approval.

Grantor Trusts

During 2004 and 2005, a third party to the Corporation, referred to in this subsection as the seller, established a series of statutory trusts to effect the securitization of mortgage loans and the sale of trust certificates. The seller initially provided the servicing for a fee, which is senior to the obligations to pay trust certificate holders. The seller then entered into a sales agreement through which it sold and issued the trust certificates in favor of the Corporation's banking subsidiary. Currently, the Bank is the sole owner of the trust certificates; the servicing of the underlying residential mortgages that generate the principal and interest cash flows is performed by another third party, which receives a servicing fee. The securities are variable rate securities indexed to 90-day LIBOR plus a spread. The principal payments from the underlying loans are remitted to a paying agent (servicer) who then remits interest to the Bank; interest income is shared to a certain extent with the FDIC, which has an interest only strip ("IO") tied to the cash flows of the underlying loans and is entitled to receive the excess of the interest income less a servicing fee over the variable rate income that the Bank earns on the securities. This IO is limited to the weighted-average coupon of the securities. The FDIC became the owner of the IO upon its intervention of the seller, a failed financial institution. No recourse agreement exists and the risks from losses on non-accruing loans and repossessed collateral are absorbed by the Bank as the sole holder of the certificates. As of June 30, 2016, the amortized cost and fair value of Grantor Trusts amounted to \$31.7 million and \$23.7 million, respectively, with a weighted average yield of 2.34%.

Investment in unconsolidated entity

On February 16, 2011, FirstBank sold an asset portfolio consisting of performing and non-performing construction, commercial mortgage and commercial and industrial loans with an aggregate book value of \$269.3 million to CPG/GS, an entity organized under the laws of the Commonwealth of Puerto Rico and majority owned by PRLP Ventures LLC ("PRLP"), a company created by Goldman, Sachs & Co. and Caribbean Property Group. In connection with the sale, the Corporation received \$88.5 million in cash and a 35% interest in CPG/GS, and made a loan in the amount of \$136.1 million representing seller financing provided by FirstBank. The loan has a seven-year maturity and bears variable interest at 30-day LIBOR plus 300 basis points and is secured by a pledge of all of the acquiring entity's assets as well as the PRLP's 65% ownership interest in CPG/GS. As of June 30, 2016, the carrying amount of the loan was \$7.9 million, which was included in the Corporation's Commercial and Industrial loans held for investment portfolio. FirstBank's equity interest in CPG/GS is accounted for under the equity method. When applying the equity method, the Bank follows the Hypothetical Liquidation Book Value method ("HLBV") to determine its share of CPG/GS's earnings or loss. The loss recorded in 2014 reduced to zero the carrying amount of the Bank's investment in CPG/GS. No negative investment needs to be reported as the Bank has no legal obligation or commitment to provide further financial support to this entity; thus, no further losses have been or will be recorded on this investment. Any potential increase in the carrying value of the investment in CPG/GS, under the HLBV method, would depend upon

Adoption of new accounting requirements and recently issued but not yet effective accounting requirements

how better off the Bank is at the end of the period than it was at the beginning of the period after the waterfall calculation performed to determine the amount of gain allocated to the investors.

FirstBank also provided an \$80 million advance facility to CPG/GS to fund unfunded commitments and costs to complete projects under construction, which was fully disbursed in 2011, and a \$20 million working capital line of credit to fund certain expenses of CPG/GS. The working capital line of credit was renewed and reduced to \$7 million for a period of two years expiring on September 2016. During 2012, CPG/GS repaid the outstanding balance of the advance facility to fund unfunded commitments, and the funds became available for rewithdrawal under a one-time revolver agreement. These loans bear variable interest at 30-day LIBOR plus 300 basis points. As of June 30, 2016, the carrying value of the revolver agreement was \$13.3 million, which was included in the Corporation's commercial and industrial loans held for investment portfolio. The carrying value of the working capital line was \$0 as of June 30, 2016.

Cash proceeds received by CPG/GS are first used to cover operating expenses and debt service payments, including those related to the note receivable, the advance facility, and the working capital line, described above, which must be substantially repaid before proceeds can be used for other purposes, including the return of capital to both PRLP and FirstBank. FirstBank will not receive any return on its equity interest until PRLP receives an aggregate amount equivalent to its initial investment and a priority return of at least 12%, resulting in FirstBank's interest in CPG/GS being subordinate to PRLP's interest. CPG/GS will then begin to make payments pro rata to PRLP and FirstBank, 35% and 65%, respectively, until FirstBank has achieved a 12% return on its invested capital and the aggregate amount of distributions is equal to FirstBank's capital contributions to CPG/GS.

The Bank has determined that CPG/GS is a VIE in which the Bank is not the primary beneficiary. In determining the primary beneficiary of CPG/GS, the Bank considered applicable guidance that requires the Bank to qualitatively assess the determination of the primary beneficiary (or consolidator) of CPG/GS based on whether it has both the power to direct the activities of CPG/GS that most significantly impact the entity's economic performance and the obligation to absorb losses of CPG/GS that could potentially be significant to the VIE or the right to receive benefits from the entity that could potentially be significant to the VIE.

Changes in the impairment allowance were as follows:												
	Quarter ended						Six-Month Period Ended					
	June 30,						June 30,					
(In thousands)	2016			2015			2016			2015		
Balance at beginning of period	\$	109		\$	93		\$	136		\$	55	
Temporary impairment charges		167			128			194			186	
Recoveries		(16)			(19)			(70)			(39)	
Balance at end of period	\$	260		\$	202		\$	260		\$	202	

The components of net servicing income are shown below:

(1) Mainly consisted of compensatory fees imposed by GSEs.											

The Corporation's servicing assets are subject to prepayment and interest rate risks. Key economic assumptions used in determining the fair value at the time of sale of the related mortgages ranged as follows:											
						Maximum			Minimum		
Six-Month Period Ended June 30, 2016:											
Constant prepayment rate:											
Government guaranteed mortgage loans		7.6	%				7.6	%			
Conventional conforming mortgage loans		8.0	%				8.0	%			
Conventional non-conforming mortgage loans		14.1	%				14.0	%			
Discount rate:											
Government guaranteed mortgage loans		11.5	%				11.5	%			
Conventional conforming mortgage loans		9.5	%				9.5	%			
Conventional non-conforming mortgage loans		13.8	%				13.8	%			
Six-Month Period Ended June 30, 2015:											
Constant prepayment rate:											
Government guaranteed mortgage loans		9.2	%				7.9	%			
Conventional conforming mortgage loans		9.0	%				7.9	%			
Conventional non-conforming mortgage loans		14.0	%				12.9	%			
Discount rate:											
Government guaranteed mortgage loans		11.5	%				11.5	%			
Conventional conforming mortgage loans		9.5	%				9.5	%			
Conventional non-conforming mortgage loans		13.8	%				13.8	%			

--	--	--	--	--	--

As of June 30, 2016, fair values of the Corporation's servicing assets were based on a valuation model that incorporates market driven assumptions regarding discount rates and mortgage prepayment rates, adjusted by the particular characteristics of the Corporation's servicing portfolio. The weighted-averages of the key economic assumptions used by the Corporation in its valuation model and the sensitivity of the current aggregate fair value to immediate 10% and 20% adverse changes in those assumptions for mortgage loans as of June 30, 2016 were as follows:

	(Dollars in thousands)		
Carrying amount of servicing assets	\$	25,044	
Fair value	\$	27,695	
Weighted-average expected life (in years)		8.22	
Constant prepayment rate (weighted-average annual rate)		10.56%	
Decrease in fair value due to 10% adverse change	\$	913	
Decrease in fair value due to 20% adverse change	\$	1,776	
Discount rate (weighted-average annual rate)		10.67%	
Decrease in fair value due to 10% adverse change	\$	1,220	
Decrease in fair value due to 20% adverse change	\$	2,346	

These sensitivities are hypothetical and should be used with caution. As the figures indicate, changes in fair value based on a 10% variation in assumptions generally cannot be extrapolated because the relationship between the change in assumption and the change in fair value may not be linear. Also, in this table, the effect of a variation in a particular assumption on the fair value of the servicing asset is calculated without changing any other assumption; in reality, changes in one factor may result in changes in another (for example, increases in market interest rates may result in lower prepayments), which may magnify or counteract the sensitivities.

NOTE 14 – DEPOSITS

The following table summarizes deposit balances:				
	June 30,			December 31,
	2016			2015
(In thousands)				
Type of account:

NOTE 15 – SECURITIES SOLD UNDER AGREEMENTS TO REPURCHASE

Securities sold under agreements to repurchase (repurchase agreements) consist of the following:						
(Dollars in thousands)		June 30, 2016			December 31, 2015	
Repurchase agreements, interest ranging from 1.96% to 3.72%						
(December 31, 2015- 1.96% to 3.41%) (1)(2)		\$	700,000		\$	700,000
(1) Reported net of securities purchased under agreements to repurchase (reverse repurchase agreements) by counterparty, when applicable, pursuant to ASC 210-20-45-11.						
(2) As of June 30, 2016, includes \$600 million with an average rate of 2.89% that lenders have the right to call before their contractual maturities at various dates beginning on July 19, 2016. In addition, \$500 million is tied to variable rates.						

Repurchase agreements mature as follows:			
			June 30, 2016
			(In thousands)
One month to three months		\$	100,000
Over three months to six months			300,000
One year to three years			100,000
Over five years			200,000
Total		\$	700,000

As of June 30, 2016 and December 31, 2015, the securities underlying such agreements were delivered to the dealers with which the repurchase agreements were transacted.

Repurchase agreements as of June 30, 2016, grouped by counterparty, were as follows:						
(Dollars in thousands)						Weighted-Average
Counterparty	Amount				Maturity (In Months)	

Edgar Filing: FIRST BANCORP /PR/ - Form 10-Q

		Credit Suisse First Boston		\$	100,000		1
		Citigroup Global Markets			300,000		4
		Dean Witter / Morgan Stanley			100,000		16
		JP Morgan Chase			200,000		67
				\$	700,000		

NOTE 16 – ADVANCES FROM THE FEDERAL HOME LOAN BANK (FHLB)

The following is a summary of the advances from the FHLB:					
		June 30,		December 31,	
	(Dollars in thousands)	2016		2015	
	Fixed-rate advances from FHLB, with a weighted-				
	average interest rate of 1.30%	\$	455,000	\$	455,000

Advances from FHLB mature as follows:			
	(In thousands)	June 30, 2016	
	Over one month to three months	\$	100,000
	Over one year to three years		225,000
	Over three to four years		130,000
	Total	\$	455,000

As of June 30, 2016, the Corporation had additional capacity of approximately \$652.6 million on this credit facility based on collateral pledged at the FHLB, including a haircut reflecting the perceived risk associated with holding the collateral.

NOTE 17 – OTHER BORROWINGS

Other borrowings consist of:

		June 30,		December 31,
	(In thousands)	2016		2015

Adoption of new accounting requirements and recently issued but not yet effective accounting requirements

Junior subordinated debentures due in 2034,

and 3.28% as of December 31, 2015)	\$	97,626		\$	97,626
Junior subordinated debentures due in 2034,					
interest-bearing at a floating rate of 2.50%					
over 3-month LIBOR (3.15% as of June 30, 2016					
and 3.07% as of December 31, 2015) (1)		118,561			128,866
	\$	216,187		\$	226,492
(1)	Refer to Note 13 - Non-Consolidated Variable Interest Entities and Servicing Assets - Trust Preferred Securities for additional information about the Corporation's repurchase and cancellation of \$10 million of trust preferred securities associated with these junior subordinated debentures.				

NOTE 18 – STOCKHOLDERS' EQUITY

Common Stock

As of June 30, 2016 and December 31, 2015, the Corporation had 2,000,000,000 authorized shares of common stock with a par value of \$0.10 per share. As of June 30, 2016 and December 31, 2015, there were 218,278,207 and 216,051,128 shares issued, respectively, and 217,129,074 and 215,088,698 shares outstanding, respectively. On July 30, 2009, the Corporation announced the suspension of common and preferred stock dividends effective with the preferred dividend for the month of August 2009. Refer to Note 3 for information about transactions related to common stock under the Omnibus Plan.

Preferred Stock

The Corporation has 50,000,000 authorized shares of preferred stock with a par value of \$1.00, redeemable at the Corporation's option subject to certain terms. This stock may be issued in series and the shares of each series will have such rights and preferences as are fixed by the Board of Directors when authorizing the issuance of that particular series. As of June 30, 2016, the Corporation has five outstanding series of non-convertible, non-cumulative preferred stock: 7.125% non-cumulative perpetual monthly income preferred stock, Series A; 8.35% non-cumulative perpetual monthly income preferred stock, Series B; 7.40% non-cumulative perpetual monthly income preferred stock, Series C; 7.25% non-cumulative perpetual monthly income preferred stock, Series D; and 7.00% non-cumulative perpetual monthly income preferred stock, Series E. The liquidation value per share is \$25.

Effective January 17, 2012, the Corporation delisted all of its outstanding series of non-convertible, non-cumulative preferred stock from the New York Stock Exchange. The Corporation has not arranged for listing and/or registration on another national securities exchange or for quotation of the Series A through E Preferred Stock in a quotation medium.

Treasury stock

During the first half of 2016 and 2015, the Corporation withheld an aggregate of 186,703 shares and 117,858 shares, respectively, of the common stock paid to certain senior officers as additional compensation and vested restricted stock to cover employees' payroll and income tax withholding liabilities; these shares are held as treasury shares. As of June 30, 2016 and December 31, 2015, the Corporation had 1,149,133 and 962,430 shares held as treasury stock, respectively.

FirstBank Statutory Reserve (Legal Surplus)

Adoption of new accounting requirements and recently issued but not yet effective accounting requirements

The Banking Law of the Commonwealth of Puerto Rico requires that a minimum of 10% of FirstBank's net income for the year be transferred to legal surplus until such surplus equals the total of paid-in-capital on common and preferred stock. Amounts transferred to the legal surplus account from the retained earnings account are not available for distribution to the Corporation, including for payment as dividends to the stockholders, without the prior consent of the Puerto Rico Commissioner of Financial Institutions. The Puerto Rico Banking Law provides that, when the expenditures of a Puerto Rico commercial bank are greater than receipts, the excess of the expenditures over receipts shall be charged against the undistributed profits of the bank, and the balance, if any, shall be charged against the reserve fund, as a reduction thereof. If there is no reserve fund sufficient to cover such balance in whole or in part, the outstanding amount shall be charged against the capital account and the Bank cannot pay dividends until it can replenish the reserve fund to an amount of at least 20% of the original capital contributed. During the fourth quarter of 2015, \$2.8 million was transferred to the legal surplus reserve. FirstBank's legal surplus reserve, included as part of retained earnings in the Corporation's statement of financial condition, amounted to \$42.8 million as of June 30, 2016. There were no transfers to the legal surplus reserve during the first half of 2016.

NOTE 19 - INCOME TAXES

Income tax expense includes Puerto Rico and USVI income taxes as well as applicable U.S. federal and state taxes. The Corporation is subject to Puerto Rico income tax on its income from all sources. As a Puerto Rico corporation, First BanCorp. is treated as a foreign corporation for U.S. and USVI income tax purposes and is generally subject to U.S. and USVI income tax only on its income from sources within the U.S. and USVI or income effectively connected with the conduct of a trade or business in those regions. Any tax paid in the U.S. and USVI is also creditable against the Corporation's Puerto Rico tax liability, subject to certain conditions and limitations.

Under the Puerto Rico Internal Revenue Code of 2011, as amended (the "2011 PR Code"), the Corporation and its subsidiaries are treated as separate taxable entities and are not entitled to file consolidated tax returns and, thus, the Corporation is not able to utilize losses from one subsidiary to offset gains in another subsidiary. Accordingly, in order to obtain a tax benefit from a net operating loss ("NOL"), a particular subsidiary must be able to demonstrate sufficient taxable income within the applicable NOL carry forward period. The 2011 PR Code provides a dividend received deduction of 100% on dividends received from "controlled" subsidiaries subject to taxation in Puerto Rico and 85% on dividends received from other taxable domestic corporations.

The Corporation has maintained an effective tax rate lower than the maximum statutory rate in Puerto Rico mainly by investing in government obligations and mortgage-backed securities exempt from U.S. and Puerto Rico income taxes and by doing business through an International Banking Entity ("IBE") unit of the Bank, and through the Bank's subsidiary, FirstBank Overseas Corporation, whose interest income and gain on sales is exempt from Puerto Rico income taxation. The IBE and FirstBank Overseas Corporation were created under the International Banking Entity Act of Puerto Rico, which provides for total Puerto Rico tax exemption on net income derived by IBEs operating in Puerto Rico on the specific activities identified in the IBE Act. An IBE that operates as a unit of a bank pays income taxes at the corporate standard rates to the extent that the IBE's net income exceeds 20% of the bank's total net taxable income.

As of June 30, 2016, the deferred tax assets, net of a valuation allowance of \$198.2 million, amounted to \$299.3 million and management concluded, based upon the assessment of all positive and negative evidence, that it is more likely than not that the Corporation will generate sufficient taxable income within the applicable NOL carry-forward periods to realize such amount.

The Corporation recorded an income tax expense of \$7.5 million and \$13.2 million in the second quarter and first six months of 2016, respectively, compared to an income tax benefit of \$9.8 million and \$1.8 million for the same periods in 2015. The increase in income tax expense for the quarter and first six months of 2016, as compared to the same periods in 2015, was mainly attributable to a higher taxable income mainly due to the impact in 2015 of realized losses on the bulk sale of assets. For the six-month period ended June 30, 2016, the Corporation calculated the provision for income taxes by applying the estimated annual effective tax rate for the full fiscal year to ordinary

Adoption of new accounting requirements and recently issued but not yet effective accounting requirements

income or loss. The income tax expense as a percentage of the income before income taxes for the first half of 2016 is 23% compared to 18% for the same period in 2015. In the computation of the consolidated worldwide estimated annual effective tax rate, ASC 740-270 requires the exclusion of legal entities with pre-tax losses from which a tax benefit cannot be recognized. The consolidated worldwide estimated annual effective tax rate, excluding entities with pre-tax losses from which a tax benefit cannot be recognized, is 22% for the six-month period ended June 30, 2016, compared to 30% for the same period in 2015.

As of June 30, 2016, the Corporation did not have Unrecognized Tax Benefits (“UTBs”) recorded on its books. Audit periods remain open for review until the statute of limitations has passed. The statute of limitations under the 2011 PR code is 4 years; the statute of limitations for each of Virgin Islands and U.S. income tax purposes is three years after a tax return is due or filed, whichever is later. The completion of an audit by the taxing authorities or the expiration of the statute of limitations for a given audit period could result in an adjustment to the Corporation’s liability for income taxes. Any such adjustment could be material to the results of operations for any given quarterly or annual period based, in part, upon the results of operations for the given period. For Virgin Islands and U.S. income tax purposes, all tax years subsequent to 2011 remain open to examination. The 2012 U.S. federal tax return is currently under examination by the IRS. For Puerto Rico tax purposes, all tax years subsequent to 2011 remain open to examination.

NOTE 20 – FAIR VALUE*Fair Value Measurement*

The FASB authoritative guidance for fair value measurement defines fair value as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date. This guidance also establishes a fair value hierarchy for classifying financial instruments. The hierarchy is based on whether the inputs to the valuation techniques used to measure fair value are observable or unobservable. Three levels of inputs may be used to measure fair value:

Level 1	Valuations of Level 1 assets and liabilities are obtained from readily available pricing sources for market transactions involving identical assets or liabilities. Level 1 assets and liabilities include equity securities that trade in an active exchange market, as well as certain U.S. Treasury and other U.S. government and agency securities and corporate debt securities that are traded by dealers or brokers in active markets.
Level 2	Valuations of Level 2 assets and liabilities are based on observable inputs other than Level 1 prices, such as quoted prices for similar assets or liabilities, or other inputs that are observable or can be corroborated by observable market data for substantially the full term of the assets or liabilities. Level 2 assets and liabilities include (i) mortgage-backed securities for which the fair value is estimated based on the value of identical or comparable assets, (ii) debt securities with quoted prices that are traded less frequently than exchange-traded instruments, and (iii) derivative contracts whose value is determined using a pricing model with inputs that are observable in the market or can be derived principally from or corroborated by observable market data.
Level 3	Valuations of Level 3 assets and liabilities are based on unobservable inputs that are supported by little or no market activity and are significant to the fair value of the assets or liabilities. Level 3 assets and liabilities include financial instruments whose value is determined by using pricing models for which the determination of fair value required significant management judgments estimation.

For 2016, there were no transfers into or out of Level 1, Level 2 or Level 3 of the fair value hierarchy.

Financial Instruments Recorded at Fair Value on a Recurring Basis

Adoption of new accounting requirements and recently issued but not yet effective accounting requirements 124

Investment securities available for sale

The fair value of investment securities was the market value based on quoted market prices (as is the case with equity securities, Treasury notes, and non-callable U.S. Agency debt securities), when available (Level 1), or, when available, market prices for identical or comparable assets (as is the case with MBS and callable U.S. agency debt) that are based on observable market parameters, including benchmark yields, reported trades, quotes from brokers or dealers, issuer spreads, bids, offers and reference data including market research operations (Level 2). Observable prices in the market already consider the risk of nonperformance. During the first half of 2016, the Corporation recorded OTTI charges of \$6.3 million on certain Puerto Rico Government debt securities, specifically bonds of the GDB and the Puerto Rico Public Buildings Authority. The credit impairment loss was based on the probability of default and loss severity in the event of default in consideration of the latest information available about the Puerto Rico Government's financial condition. Refer to Note 4 - Investment Securities, for significant assumptions used to determine the credit impairment portion, including default rates and recovery rates, which are unobservable inputs. If listed prices or quotes are not available, fair value is based upon models that use unobservable inputs due to the limited market activity of the instrument, as is the case with certain private label mortgage-backed securities held by the Corporation (Level 3).

Private label MBS are collateralized by fixed-rate mortgages on single-family residential properties in the United States; the interest rate on the securities is variable, tied to 3-month LIBOR and limited to the weighted-average coupon of the underlying collateral. The market valuation represents the estimated net cash flows over the projected life of the pool of underlying assets applying a discount rate that reflects market observed floating spreads over LIBOR, with a widening spread based on a nonrated security. The market valuation is derived from a model that utilizes relevant assumptions such as the prepayment rate, default rate, and loss severity on a loan level basis. The Corporation modeled the cash flow from the fixed-rate mortgage collateral using a static cash flow analysis according to collateral attributes of the underlying mortgage pool (i.e., loan term, current balance, note rate, rate adjustment type, rate adjustment frequency, rate caps, and others) in combination with prepayment forecasts obtained from a commercially available prepayment model (ADCO). The variable cash flow of the security is modeled using the 3-month LIBOR forward curve. Loss assumptions were driven by the combination of default and loss severity estimates, taking into account loan credit characteristics (loan-to-value, state, origination date, property type, occupancy loan purpose, documentation type, debt-to-income ratio, and other) to provide an estimate of default and loss severity.

Refer to the table below for further information regarding qualitative information for all assets and liabilities measured at fair value using significant unobservable inputs (Level 3).

Derivative instruments

The fair value of most of the Corporation's derivative instruments is based on observable market parameters and takes into consideration the credit risk component of paying counterparties, when appropriate, except when collateral is pledged. On interest caps, only the seller's credit risk is considered. The caps were valued using a discounted cash flow approach using the related LIBOR and swap rate for each cash flow.

Although most of the derivative instruments are fully collateralized, a credit spread is considered for those that are not secured in full. The cumulative mark-to-market effect of credit risk in the valuation of derivative instruments for the quarter and six-month periods ended June 30, 2016 and 2015 was immaterial.

Assets and liabilities measured at fair value on a recurring basis are summarized below:									
As of June 30, 2016					As of December 31, 2015

The table below presents qualitative information for significant assets and liabilities measured at fair value on a recurring basis using significant unobservable inputs (Level 3) at June 30, 2016:							
June 30, 2016							
(In thousands)	Fair Value		Valuation Technique		Unobservable Input		Range
Investment securities available-for-sale:							
Private label MBS	\$ 23,732		Discounted cash flow		Discount rate		14.5%
					Prepayment rate		21.83% -100.00% (Weighted Average 31.0%)
					Projected cumulative loss rate		0.52% -80.00% (Weighted Average 7.0%)
Puerto Rico Government Obligations	2,104		Discounted cash flow		Prepayment rate		3.00%

Information about Sensitivity to Changes in Significant Unobservable Inputs

Private label MBS: The significant unobservable inputs in the valuation include probability of default, the loss severity assumption, and prepayment rates. Shifts in those inputs would result in different fair value measurements. Increases in the probability of default, loss severity assumptions, and prepayment rates in isolation would generally result in an adverse effect on the fair value of the instruments. Meaningful and possible shifts of each input were modeled to assess the effect on the fair value estimation.

Puerto Rico Government Obligations: The significant unobservable input used in the fair value measurement is the assumed prepayment rate of the underlying residential mortgage loans collateral on these obligations which are guaranteed by the Puerto Rico Housing Finance Authority (“PRHFA”). A significant increase (decrease) in the assumed rate would lead to a higher (lower) fair value estimate. Loss severity and probability of default are not included as significant unobservable variables due to the guarantee of the PRHFA. The PRHFA credit risk is modeled by discounting the cash flows using a curve appropriate to the PRHFA credit rating.

The tables below summarize changes in unrealized gains and losses recorded in earnings for the quarters and six-month periods ended June 30, 2016 and 2015 for Level 3 assets and liabilities that are still held at the end of each period:

		Changes in Unrealized Losses			Changes in Unrealized Losses	
		(Quarter ended June 30, 2016)			(Quarter ended June 30, 2015)	
Level 3 Instruments Only		Securities			Securities	
(In thousands)		Available For Sale			Available For Sale	
Changes in unrealized losses relating to assets still held at reporting date:						
Net impairment losses on available-for-sale investment securities (credit component)		\$	-		\$	(241)

		Changes in Unrealized Losses			Changes in Unrealized Losses	
		(Six-Month Period Ended June 30, 2016)			(Six-Month Period Ended June 30, 2015)	
Level 3 Instruments Only		Securities			Securities	
(In thousands)		Available For Sale			Available For Sale	
Changes in unrealized losses relating to assets still held at reporting date:						
Net impairment losses on available-for-sale investment securities (credit component)		\$	(387)		\$	(397)

Additionally, fair value is used on a nonrecurring basis to evaluate certain assets in accordance with GAAP. Adjustments to fair value usually result from the application of lower-of-cost or market accounting (e.g., loans held for sale carried at the lower-of-cost or fair value and repossessed assets) or write downs of individual assets (e.g., goodwill, loans).

As of June 30, 2016, impairment or valuation adjustments were recorded for assets recognized at fair value on a non-recurring basis as shown in the following table:												
Carrying value as of June 30, 2016										(Losses) recorded for the Quarter Ended June 30, 2016		(Losses) recorded for the Six-Month Period Ended June 30, 2016
Level 1			Level 2			Level 3						
(In thousands)												
Loans receivable ⁽¹⁾	\$	-	\$	-	\$	464,467	\$	(7,870)	\$	(27,536)		
OREO ⁽²⁾		-		-		139,159		(3,436)		(5,727)		
Mortgage servicing rights ⁽³⁾		-		-		25,044		(151)		(124)		
(1)	Consist mainly of impaired commercial and construction loans. The impairment was generally measured based on the fair value of the collateral. The fair value was derived from external appraisals that take into consideration prices in observed transactions involving similar assets in similar locations but adjusted for specific characteristics and assumptions of the collateral (e.g. absorption rates), which are not market observable.											
(2)	The fair value was derived from appraisals that take into consideration prices in observed transactions involving similar assets in similar locations but adjusted for specific characteristics and assumptions of the properties (e.g. absorption rates and net operating income of income producing properties) which are not market observable. Losses were related to market valuation adjustments after the transfer of the loans to the OREO portfolio.											
(3)	Fair value adjustments to mortgage servicing rights were mainly due to assumptions associated with mortgage prepayment rates. The Corporation carries its mortgage servicing rights at the lower of cost or market, measured at fair value on a non-recurring basis. Assumptions for the value of mortgage servicing rights include: Prepayment rate-10.56%, Discount Rate-10.67%.											

As of June 30, 2015, impairment or valuation adjustments were recorded for assets recognized at fair value on a non-recurring basis as shown in the following table:												
Carrying value as of June 30, 2015										(Losses) recorded for the Quarter Ended June 30, 2015		(Losses) recorded for the Six-Month Period Ended June 30, 2015
Level 1			Level 2			Level 3						
(In thousands)												

	(In thousands)												
Loans receivable ⁽¹⁾	\$	-	\$	-	\$	298,935		\$	(3,586)		\$	(15,850)	
OREO ⁽²⁾		-		-		122,129			(1,906)			(5,751)	
Mortgage servicing rights ⁽³⁾		-		-		23,519			(109)			(147)	
Loans Held For Sale ⁽⁴⁾		-		-		48,032			-			-	
(1)	Consist mainly of impaired commercial and construction loans. The impairment was generally measured based on the fair value of the collateral. The fair value was derived from external appraisals that take into consideration prices in observed transactions involving similar assets in similar locations but adjusted for specific characteristics and assumptions of the collateral (e.g. absorption rates), which are not market observable.												
(2)	The fair value was derived from appraisals that take into consideration prices in observed transactions involving similar assets in similar locations but adjusted for specific characteristics and assumptions of the properties (e.g. absorption rates and net operating income of income producing properties) which are not market observable. Losses were related to market valuation adjustments after the transfer of the loans to the OREO portfolio.												
(3)	Fair value adjustments to the mortgage servicing rights were mainly due to assumptions associated with mortgage prepayments rates. The Corporation carries its mortgage servicing rights at the lower of cost or market, measured at fair value on a non-recurring basis. Assumptions for the value of mortgage servicing rights include: Prepayment Rate-9.16%, Discount Rate-10.63%.												
(4)	The value of these loans was derived from external appraisals, adjusted for specific characteristics of the loans.												

Qualitative information regarding the fair value measurements for Level 3 financial instruments is as follows:			
June 30, 2016			
	Method		Inputs
Loans	Income, Market, Comparable Sales, Discounted Cash Flows		External appraised values; probability weighting of broker price opinions; management assumptions regarding market trends or other relevant factors
OREO	Income, Market, Comparable Sales, Discounted Cash Flows		External appraised values; probability weighting of broker price opinions; management assumptions regarding market trends or other relevant factors
Mortgage servicing rights	Discounted Cash Flow		Weighted average prepayment rate of 10.56%; weighted average discount rate of 10.67%

The following is a description of the valuation methodologies used for instruments that are not measured or reported at fair value on a recurring basis or that are reported at fair value on a non-recurring basis. The estimated fair value was calculated using certain facts and assumptions, which vary depending on the specific financial instrument.

Cash and due from banks and money market investments

The carrying amounts of cash and due from banks and money market investments are reasonable estimates of their fair value. Money market investments include held-to-maturity securities, which have a contractual maturity of three months or less. The fair value of these securities is based on quoted market prices in active markets that incorporate the risk of nonperformance.

Investment securities held to maturity

Investment securities held to maturity consist of financing arrangements with Puerto Rico municipalities issued in bond form, but underwritten as loans with features that are typically found in commercial loan transactions. These obligations typically are not issued in bearer form, nor are they registered with the SEC and are not rated by external credit agencies. The fair value of these financing arrangements was based on a discounted cash flow analysis using risk-adjusted discount rates (Level 3). A security with similar characteristics traded in the open market is used as a proxy for each municipal bond. Then the cash flow is discounted at the average spread over the discount curve exhibited by the proxy security at the end of each quarter.

Other equity securities

Equity or other securities that do not have a readily available fair value are stated at their net realizable value, which management believes is a reasonable proxy for their fair value. This category is principally composed of stock that is owned by the Corporation to comply with FHLB regulatory requirements. The realizable value of the FHLB stock equals its cost as this stock can be freely redeemed at par.

Loans receivable, including loans held for sale

The fair value of loans held for investment and of mortgage loans held for sale was estimated using discounted cash flow analyses, based on interest rates currently being offered for loans with similar terms and credit quality and with adjustments that the Corporation's management believes a market participant would consider in determining fair value. Loans were classified by type, such as commercial, residential mortgage, and automobile. These asset categories were further segmented into fixed- and adjustable-rate categories. Valuations are carried out based on categories and not on a loan-by-loan basis. The fair values of performing fixed-rate and adjustable-rate loans were calculated by discounting expected cash flows through the estimated maturity date. This fair value is not currently an indication of an exit price as that type of assumption could result in a different fair value estimate. The fair value of credit card loans was estimated using a discounted cash flow method and excludes any value related to a customer account relationship. Other loans with no stated maturity, like credit lines, were valued at book value. Prepayment assumptions were considered for non-residential loans. For residential mortgage loans, prepayment estimates were based on a prepayment model that combined both a historical calibration and current market prepayment expectations. Discount rates were based on the U.S. Treasury and LIBOR/Swap Yield Curves at the date of the analysis, and included appropriate adjustments for expected credit losses and liquidity. For impaired collateral dependent loans, the impairment was primarily measured based on the fair value of the collateral, which is derived from appraisals that take into consideration prices in observable transactions involving similar assets in similar locations.

Deposits

The estimated fair value of demand deposits and savings accounts, which are deposits with no defined maturities, equals the amount payable on demand at the reporting date. The fair values of retail fixed-rate time deposits, with stated maturities, are based on the present value of the future cash flows expected to be paid on the deposits. The cash flows were based on contractual maturities; no early repayments were assumed. Discount rates were based on the LIBOR yield curve.

The estimated fair value of total deposits excludes the fair value of core deposit intangibles, which represent the value of the customer relationship. The fair value of total deposits is measured by the value of demand deposits and savings deposits that bear a low or zero rate of interest and do not fluctuate in response to changes in interest rates.

The fair value of brokered CDs, which are included within deposits, is determined using discounted cash flow analyses over the full term of the CDs. The fair value of the CDs is computed using the outstanding principal amount. The discount rates used were based on brokered CD market rates as of June 30, 2016. The fair value does not incorporate the risk of nonperformance, since interests in brokered CDs are generally sold by brokers in amounts of less than \$250,000 and, therefore, are insured by the FDIC.

Securities sold under agreements to repurchase

Some repurchase agreements reprice at least quarterly, and their outstanding balances are estimated to be their fair value. Where longer commitments are involved, fair value is estimated using exit price indications of the cost of unwinding the transactions as of the end of the reporting period. The brokers who are the counterparties provide these indications and are evaluated by the Corporation. Securities sold under agreements to repurchase are fully collateralized by investment securities.

Advances from FHLB

The fair value of advances from the FHLB with fixed maturities is determined using discounted cash flow analyses over the full term of the borrowings, using indications of the fair value of similar transactions. The cash flows assume no early repayment of the borrowings. Discount rates are based on the LIBOR yield curve. Advances from the FHLB are fully collateralized by mortgage loans and, to a lesser extent, investment securities.

Other borrowings

Adoption of new accounting requirements and recently issued but not yet effective accounting requirements

Other borrowings consist of junior subordinated debentures. Projected cash flows from the debentures were discounted using the Bloomberg BB Finance curve plus a credit spread. This credit spread was estimated using the difference in yield curves between swap rates and a yield curve that considers the industry and credit rating of the Corporation as issuer of the debentures at a tenor comparable to the time to maturity of the debentures.

The following table presents the carrying value and the estimated fair value of financial instruments as of June 30, 2016 and December 31, 2015:

NOTE 22 – SEGMENT INFORMATION

Based upon the Corporation's organizational structure and the information provided to the Chief Executive Officer of the Corporation and, to a lesser extent, the Board of Directors, the operating segments are driven primarily by the Corporation's lines of business for its operations in Puerto Rico, the Corporation's principal market, and by geographic areas for its operations outside of Puerto Rico. As of June 30, 2016, the Corporation had six reportable segments: Commercial and Corporate Banking; Mortgage Banking; Consumer (Retail) Banking; Treasury and Investments; United States Operations; and Virgin Islands Operations. Management determined the reportable segments based on the internal reporting used to evaluate performance and to assess where to allocate resources. Other factors such as the Corporation's organizational chart, nature of the products, distribution channels, and the economic characteristics of the products were also considered in the determination of the reportable segments.

The Commercial and Corporate Banking segment consists of the Corporation's lending and other services for large customers represented by specialized and middle-market clients and the public sector. The Commercial and Corporate Banking segment offers commercial loans, including commercial real estate and construction loans, and floor plan financings, as well as other products, such as cash management and business management services. The Mortgage Banking segment consists of the origination, sale, and servicing of a variety of residential mortgage loans. The Mortgage Banking segment also acquires and sells mortgages in the secondary markets. In addition, the Mortgage Banking segment includes mortgage loans purchased from other local banks and mortgage bankers. The Consumer (Retail) Banking segment consists of the Corporation's consumer lending and deposit-taking activities conducted mainly through its branch network and loan centers. The Treasury and Investments segment is responsible for the Corporation's investment portfolio and treasury functions executed to manage and enhance liquidity. This segment lends funds to the Commercial and Corporate Banking, Mortgage Banking and Consumer (Retail) Banking segments to finance their lending activities and borrows from those segments and from the United States Operations segment. The Consumer (Retail) Banking and the United States Operations segments also lend funds to other segments. The interest rates charged or credited by Treasury and Investments, the Consumer (Retail) Banking and the United States Operations segments are allocated based on market rates. The difference between the allocated interest income or expense and the Corporation's actual net interest income from centralized management of funding costs is reported in the Treasury and Investments segment. The United States Operations segment consists of all banking activities conducted by FirstBank in the United States mainland, including commercial and retail banking services. The Virgin Islands Operations segment consists of all banking activities conducted by the Corporation in the USVI and BVI, including commercial and retail banking services.

The accounting policies of the segments are the same as those referred to in Note 1, "Basis of Presentation and Significant Accounting Policies," in the audited consolidated financial statements of the Corporation for the year ended December 31, 2015, which are included in the Corporation's 2015 Annual Report on Form 10-K.

The Corporation evaluates the performance of the segments based on net interest income, the provision for loan and lease losses, non-interest income and direct non-interest expenses. The segments are also evaluated based on the average volume of their interest-earning assets less the allowance for loan and lease losses.

Supplemental cash flow information is as follows:

The following table presents information about the reportable segments:							
(In thousands)	Mortgage Banking	Consumer (Retail) Banking	Commercial and Corporate	Treasury and Investments	United States Operations	Virgin Islands Operations	Total
For the quarter ended June 30, 2016:

Total consolidated average assets	\$	12,741,868	\$	12,854,327	\$	12,698,149	\$	12,865,157		
(1)	The bargain purchase gain on the acquisition of assets and assumption of deposits from Doral Bank in 2015 is presented as an Other non-interest gain (loss) the table above.									
(2)	Expenses pertaining to corporate administrative functions that support the operating segments but are not specifically attributable to or managed by any segment are not included in the reported financial results of the operating segments. The unallocated corporate expenses include certain general and administrative expenses and related depreciation and amortization expenses.									

NOTE 23 – REGULATORY MATTERS, COMMITMENTS AND CONTINGENCIES

The Corporation is subject to various regulatory capital requirements imposed by the federal banking agencies. Failure to meet minimum capital requirements can result in certain mandatory and possibly additional discretionary actions by regulators that, if undertaken, could have a direct material adverse effect on the Corporation's financial statements. Under capital adequacy guidelines and the regulatory framework for prompt corrective action, the Corporation must meet specific capital guidelines that involve quantitative measures of the Corporation's assets and liabilities, and certain off-balance sheet items as calculated under regulatory accounting practices. The Corporation's capital amounts and classification are also subject to qualitative judgments and adjustment by the regulators with respect to minimum capital requirements, components, risk weightings, and other factors.

First BanCorp. is subject to the Written Agreement that the Corporation entered into with the New York FED on June 3, 2010. The Written Agreement provides, among other things, that the holding company must serve as a source of strength to FirstBank, and that, except with the consent generally of the New York FED and the Federal Reserve Board, (1) the holding company may not pay dividends to stockholders or receive dividends from FirstBank, (2) the holding company and its nonbank subsidiaries may not make payments on trust-preferred securities or subordinated debt, and (3) the holding company cannot incur, increase, or guarantee debt or repurchase any capital securities. The Written Agreement also required that the holding company submit a capital plan acceptable to the New York FED that reflected sufficient capital at First BanCorp. on a consolidated basis and followed certain guidelines with respect to the appointment or change in responsibilities of senior officers. The foregoing summary is not complete and is qualified in all respects by reference to the actual language of the Written Agreement, which has been filed with the SEC.

The Corporation submitted its Capital Plan setting forth its plans for how to improve its capital positions to comply with the Written Agreement over time. In addition to the Capital Plan, the Corporation submitted to its regulators a liquidity and brokered CD plan, including a contingency funding plan, a non-performing asset reduction plan, a budget and profit plan, a strategic plan, and a plan for the reduction of classified and special mention assets. As of June 30, 2016, the Corporation had completed all of the items included in the Capital Plan and is continuing to work on reducing non-performing loans. The Written Agreement also requires the submission to the regulators of quarterly progress reports.

Although the Corporation and FirstBank became subject to the U.S. Basel III capital rules ("Basel III rules") beginning on January 1, 2015, certain requirements of the Basel III rules will be phased in over several years. The phase-in period for certain deductions and adjustments to regulatory capital (such as certain intangible assets and deferred tax assets that arise from net operating losses and tax credit carryforwards) will be completed on January 1, 2018. The Corporation and FirstBank compute risk-weighted assets using the Standardized Approach required by the Basel III rules.

The Basel III rules require the Corporation to maintain an additional capital conservation buffer of 2.5% to avoid limitations on both (i) capital distributions (e.g. repurchases of capital instruments or dividend or interest payments on capital instruments) and (ii) discretionary bonus payments to executive officers and heads of major business lines. The phase-in of the capital conservation buffer began on January 1, 2016 with a first year requirement of 0.625% of additional Common Equity Tier 1 Capital ("CET1"), which will

be progressively increased over a four-year period, increasing by that same percentage amount on each subsequent January 1 until it reaches the fully phased-in 2.5% CET1 requirement on January 1, 2019.

Under the fully phased-in Basel III rules, the Corporation will be required to maintain: (i) a minimum CET1 capital to risk-weighted assets ratio of at least 4.5%, plus the 2.5% “capital conservation buffer,” resulting in a required minimum CET1 ratio of at least 7%, (ii) a minimum ratio of total Tier 1 capital to risk-weighted assets of at least 6.0%, plus the 2.5% capital conservation buffer, resulting in a required minimum Tier 1 capital ratio of 8.5%, (iii) a minimum ratio of total Tier 1 plus Tier 2 capital to risk-weighted assets of at least 8.0%, plus the 2.5% capital conservation buffer, resulting in a required minimum total capital ratio of 10.5%, and (iv) a required minimum leverage ratio of 4%, calculated as the ratio of Tier 1 capital to average on-balance sheet (non-risk adjusted) assets.

In addition, as required under the Basel III rules, the Corporation’s trust preferred securities (“TRuPs”) were fully phased out from Tier 1 capital on January 1, 2016. However, the Corporation’s TRuPs may continue to be included in Tier 2 capital until the instruments are redeemed or mature.

In March 2016, the FDIC adopted a final rule that imposes a deposit insurance assessment surcharge on banks with at least \$10 billion in assets, of 4.5 cents per \$100 of their assessment base, after making certain adjustments. For purposes of this surcharge, the first \$10 billion of assets are subtracted from the regular insurance assessment base to determine the surcharge base. The final rule became effective on July 1, 2016 and applies to FirstBank. The FDIC also implemented a reduced initial base assessment rate, which reduce the standard risk-based assessment rate. The adoption of this rule is expected to result in a decrease on the total FDIC insurance premium expense (standard risk-based assessment + assessment surcharge expense) of approximately \$3.0 million, on an annual basis, based on the Bank’s current surcharge base which is slightly higher than the \$10 billion threshold.

Other Recent Regulatory Developments

In May 2016, the federal banking agencies proposed regulations governing incentive-based compensation practices at covered banking institutions. These proposed rules are intended to better align the financial rewards for covered employees with an institution’s long-term safety and soundness. Portions of these proposed rules would apply to the Corporation and FirstBank. Those applicable provisions would generally (i) prohibit types and features of incentive-based compensation arrangements that encourage inappropriate risk because they are “excessive” or “could lead to material financial loss” at the banking institution; (ii) require incentive-based compensation arrangements to adhere to three basic principles: (1) a balance between risk and reward; (2) effective risk management and controls; (3) effective governance; and (iii) require appropriate board of directors (or committee) oversight and recordkeeping and disclosures to the banking institution’s primary regulatory agency. The nature and substance of any final action to adopt these proposed rules and the timing of any such action, are not known at this time.

Please refer to the discussion in “Part I – Item 7 – Business – Supervision and Regulation” in the Corporation’s 2015 Form 10-K for a more complete discussion of supervision and regulatory matters and activities that affect the Corporation and its subsidiaries.

The Corporation's and its banking subsidiary's regulatory capital positions as of June 30, 2016 and December 31, 2015 were as follows:

The Corporation enters into financial instruments with off-balance sheet risk in the normal course of business to meet the financing needs of its customers. These financial instruments may include commitments to extend credit and commitments to sell mortgage loans at fair value. As of June 30, 2016, commitments to extend credit amounted to approximately \$1.2 billion, of which \$646.3 million relates to credit card loans. Commercial and Financial standby letters of credit amounted to approximately \$35.3 million. Commitments to extend credit are agreements to lend to a customer as long as there is no violation of any conditions established in the contract. Commitments generally have fixed expiration dates or other termination clauses. Since certain commitments are expected to expire without being drawn upon, the total commitment amount does not necessarily represent future cash requirements. For most of the commercial lines of credit, the Corporation has the option to reevaluate the agreement prior to additional disbursements. In the case of credit cards and personal lines of credit, the Corporation can cancel the unused credit facility at any time and without cause. Generally, the Corporation does not enter into interest rate lock agreements with prospective borrowers in connection with its mortgage banking activities.

As of June 30, 2016, First BanCorp. and its subsidiaries were defendants in various legal proceedings arising in the ordinary course of business. Management believes that the final disposition of these matters, to the extent not previously provided for, will not have a material adverse effect, individually or in the aggregate, on the Corporation's financial position, results of operations or cash flows.

NOTE 24 – FIRST BANCORP. (HOLDING COMPANY ONLY) FINANCIAL INFORMATION

The following condensed financial information presents the financial position of the Holding Company only as of June 30, 2016 and December 31, 2015 and the results of its operations for the quarters and six-month periods ended June 30, 2016 and 2015.

(1)	Non-GAAP financial measures. Refer to "Capital" below for additional information about the components and a reconciliation of these measures.												
(2)	On a tax-equivalent basis and excluding the changes in fair value of derivative instruments (see "Net Interest Income" below for a reconciliation of these non-GAAP financial measures).												
(3)	Non-interest expense to the sum of net interest income and non-interest income. The denominator includes non-recurring income and changes in the fair value of derivative instruments.												
(4)	Loans used in the denominator in calculating each of these ratios include purchased credit-impaired ("PCI") loans. However, the Corporation separately tracks and reports PCI loans and excludes these from non-performing loan and non-performing asset statistics.												
(5)	The ratio of net charge-offs to average loans, excluding charge-offs associated with the bulk sale of assets, was 0.76% and 1.03% for the quarter and six-month period ended June 30, 2015, respectively.												
(6)	The ratio of the provision for loan and lease losses to net charge-offs, excluding the impact of the bulk sale of assets, was 157.21% and 129.16% for the quarter and six-month period ended June 30, 2015, respectively.												

The following Management's Discussion and Analysis of Financial Condition and Results of Operations relates to the accompanying unaudited consolidated financial statements of First BanCorp. (the "Corporation" or "First BanCorp.") and should be read in conjunction with such financial statements and the notes thereto. This section also presents certain non-GAAP financial measures. Refer to "Basis of Presentation" below for additional information about why the non-GAAP financial measures are being presented.

EXECUTIVE SUMMARY

First BanCorp. is a diversified financial holding company headquartered in San Juan, Puerto Rico offering a full range of financial products to consumers and commercial customers through various subsidiaries. First BanCorp. is the holding company of FirstBank Puerto Rico ("FirstBank" or the "Bank") and FirstBank Insurance Agency. Through its wholly owned subsidiaries, the Corporation operates offices in Puerto Rico, the United States Virgin Islands and British Virgin Islands, and the State of Florida (USA), concentrating on commercial banking, residential mortgage loan originations, finance leases, credit cards, personal loans, small loans, auto loans, and insurance agency and broker-dealer activities.

OVERVIEW OF RESULTS OF OPERATIONS

First BanCorp.'s results of operations depend primarily on its net interest income, which is the difference between the interest income earned on its interest-earning assets, including investment securities and loans, and the interest expense incurred on its interest-bearing liabilities, including deposits and borrowings. Net interest income is affected by various factors, including: the interest rate scenario; the volumes, mix and composition of interest-earning assets and interest-bearing liabilities; and the re-pricing characteristics of these assets and liabilities. The Corporation's results of operations also depend on the provision for loan and lease losses, non-interest expenses (such as personnel, occupancy, deposit insurance premium and other costs), non-interest income (mainly service charges and fees on deposits, insurance income and revenues from broker-dealer operations), gains (losses) on sales of investments, gains (losses) on mortgage banking activities, and income taxes.

The Corporation had net income of \$22.0 million, or \$0.10 per diluted common share, for the quarter ended June 30, 2016, compared to a net loss of \$34.1 million, or \$0.16 per diluted common share, for the same period in 2015. The Corporation's financial results for the second quarter of 2015 were impacted by several items that management believes are not reflective of core operating performance, are not expected to reoccur with any regularity or may reoccur at uncertain times and amounts, including: (i) a \$48.7 million pre-tax loss on a bulk sale of assets, mostly comprised of non-performing and adversely classified commercial loans, including transaction expenses (a \$19.0 million tax benefit related to this transaction was recorded in the second quarter of 2015), (ii) Other-than-temporary impairment ("OTTI") losses on debt securities of \$13.1 million, primarily on Puerto Rico Government debt securities (no tax benefit was recognized for the OTTI charges), and (iii) pre-tax costs of approximately \$2.6 million related to the conversion of loan and deposit accounts acquired from Doral Bank to the FirstBank systems (a \$1.0 million tax

Supplemental cash flow information is as follows:

benefit associated with these costs was recorded in the second quarter of 2015).

The following table reconciles for the second quarter of 2016 and 2015, the reported net income to adjusted net income, a non-GAAP financial measure that excludes items that management believes are not reflective of core operating performance, are not expected to reoccur with any regularity or may reoccur at uncertain times and amounts:

	Quarter Ended June 30,						
	2016			2015			
(In thousands)							
Net income (loss), as reported	\$	21,953		\$	(34,074)		
Adjustments:							
Loss on bulk sale of assets, including transaction expenses		-			48,667		
Other-than-temporary impairment on debt securities		-			13,097		
Conversion costs of loans and deposits assumed							
from Doral Bank		-			2,562		
Income tax impact of adjustments		-			(19,979)		
Adjusted net income	\$	21,953		\$	10,273		

The key drivers of the Corporation's financial results for the quarter ended June 30, 2016, compared to the same period in 2015, include the following:

- Net interest income decreased \$6.3 million to \$120.2 million for the quarter ended June 30, 2016 compared to \$126.5 million for the same period in 2015. The decrease in net interest income was primarily driven by a \$5.9 million reduction in interest income on loans, including: (i) a \$3.9 million decrease in interest income on consumer loans mainly attributable to a decrease of \$149.3 million in the average balance of this portfolio, primarily auto loans, (ii) a \$1.1 million decrease in interest income on commercial and construction loans reflecting a decline of \$198.5 million in the average balance of these portfolios that resulted in a decrease of approximately \$0.9 million in interest income and the adverse impact of large commercial relationships classified as non-performing in 2016, and (iii) a \$1.0 million decrease in interest income on residential mortgage loans primarily reflecting both a decrease in cash collections on residential non-performing loans and a decrease of \$13.5 million in the average balance of this portfolio. In addition, net interest income was adversely impacted by a \$1.6 million increase in interest expense primarily reflecting the upward repricing of the repurchase agreements and a higher average balance of FHLB advances.

The aforementioned adverse variances were partially offset by: (i) a \$0.8 million increase in interest income on interest-bearing cash balances, due to the increase in fed fund rates in December 2015 and a \$280.8 million increase in the average balance of deposits maintained in the Federal Reserve Bank, and, (ii) a \$0.4 million increase in interest income on investment securities primarily due to an increase of \$114.5 million in the average balance of U.S. agencies debt securities, reflecting securities purchases in excess of investments called prior to maturity.

The net interest margin, excluding fair value adjustments, decreased 17 basis points to 4.01% for the second quarter of 2016 compared to the same period in 2015. The decline was primarily driven by a higher level of liquidity maintained during the second quarter of 2016, derived from loan repayments, and the adverse impact of large commercial relationships classified as non-performing in 2016. For a definition and reconciliation of this non-GAAP measure, refer to "Net Interest Income" discussion below.

- The provision for loan and lease losses decreased \$53.3 million to \$21.0 million for the second quarter of 2016 compared to \$74.3 million for the same period in 2015. The provision for the second quarter of 2015 included a charge of \$46.9 million associated with a bulk sale of assets. On June 5, 2015, the Corporation completed the bulk sale of commercial and construction loans with a book value of \$147.5 million (principal balance of \$196.5 million), comprised mostly of non-performing and adversely classified loans, as well as other real estate owned ("OREO") with a book value of \$2.9 million in a cash transaction. The sale price of this bulk sale was \$87.3 million. Approximately \$15.3 million of reserves had been allocated to the loans. This transaction resulted in total charge-offs of \$61.4 million and an incremental pre-tax loss of \$48.7 million, including \$0.9 million in professional service fees directly attributable to this bulk sale.

Excluding the impact of the bulk sale of assets in the second quarter of 2015, the provision of \$21.0 million for the second quarter of 2016 decreased by \$6.4 million compared to the adjusted provision of \$27.4 million for the same period in 2015. The decrease reflects a reduction of \$10.8 million in the adjusted provision for commercial and construction loans primarily due to the impact in the second quarter of 2015 of a \$15.5 million charge to the provision as a result of the incorporation of the \$61.4 million of net charge-offs from the bulk sale in the historical loss rates used to estimate the general reserve for commercial loans collectively evaluated for impairment, partially offset by lower loan loss recoveries in Florida as compared to the second quarter of 2015.

The aforementioned decrease in the adjusted provision for commercial and construction loans was partially offset by a \$2.7 million increase in the provision for residential mortgage loans, primarily due to revisions to the quarterly home price index for Puerto Rico published by the Federal Housing Finance Agency, which is used as the basis for the estimated value of the underlying collateral of the portfolio for purposes of determining the general reserve. In addition, the provision for consumer loans increased by \$1.7 million reflecting the impact in the second quarter of 2015 of loan loss recoveries of \$2.7 million on the sale of certain fully charged-off auto and personal loans, partially offset by improvements in historical charge-offs trends and the decrease in the size of this portfolio, primarily auto loans.

Net charge-offs totaled \$24.7 million for the second quarter of 2016, or 1.11% of average loans on an annualized basis, compared to \$78.8 million, or 3.41% of average loans, for the same period in 2015. The bulk sale of assets added \$61.4 million in net charge-offs in the second quarter of 2015. Excluding the impact of net charge-offs related to the bulk sale of assets, the \$24.7 million of net charge-offs for the second quarter of 2016 increased by \$7.3 million compared to adjusted net charge-offs of \$17.4 million for the second quarter of 2015, primarily reflecting higher losses on residential mortgage loans.

Refer to “Basis of Presentation” below for a reconciliation of certain non-GAAP financial measures (“adjusted net charge-offs” and “adjusted provision for loan and lease losses,”), which reflect the exclusion of the realized loss on the bulk sale of assets, with the corresponding measures calculated and presented in accordance with GAAP. Also refer to the discussions

under “Provision for loan and lease losses” and “Risk Management” below for an analysis of the allowance for loan and lease losses and non-performing assets and related ratios.

- The Corporation recorded non-interest income of \$19.8 million for the second quarter of 2016, compared to \$6.7 million for the same period in 2015. The increase primarily reflects the impact in the second quarter of 2015 of OTTI charges on debt securities amounting to \$13.1 million, primarily on Puerto Rico Government debt securities. Refer to “Non-Interest Income” below for additional information.
- Non-interest expenses decreased by \$13.2 million to \$89.5 million for the second quarter of 2016 compared to the same period in 2015. Non-interest expenses for the second quarter of 2015 included \$1.2 million of expenses and losses related to the bulk sale of assets and costs of \$2.6 million related to the conversion of loan and deposit accounts acquired from Doral Bank to the FirstBank systems. Excluding the aforementioned items, the \$89.5 million of non-interest expenses for the second quarter of 2016 decreased by \$9.5 million compared to adjusted non-interest expenses of \$99.0 million for the same period in 2015. The decrease was primarily related to: (i) a \$4.8 million decrease in adjusted professional service fees primarily reflecting the impact in the second quarter of 2015 of interim servicing costs of \$2.4 million related to loans and deposits acquired from Doral Bank and of \$1.3 million of professional service fees incurred in special projects and strategic, stress testing and capital planning matters, (ii) a \$2.0 million decrease in occupancy and equipment costs reflecting reductions in depreciation, electricity and repairs expenses, (iii) a \$1.3 million decrease in adjusted losses on OREO operations primarily due to lower property tax expenses, and (iv) decreases in other operating expenses such as a reduction of \$0.7 million in processing expenses mainly due to the sale of merchant contracts in the fourth quarter of 2015 and a \$0.6 million decrease in supplies, printing and mailing costs. Refer to “Basis of Presentation” below for a reconciliation of the non-GAAP financial measures “adjusted non-interest expenses,” which reflects the exclusion in the second quarter of 2015 of expenses related to the bulk sale of assets and costs related to the conversion of loan and deposit accounts from Doral Bank to the FirstBank systems, to the corresponding GAAP measure. Also refer to “Non-Interest Expenses” below for additional information.
- For the second quarter of 2016, the Corporation recorded an income tax expense of \$7.5 million, compared to an income tax benefit of \$9.8 million for the same period in 2015. The variance reflects higher taxable income mainly due to the impact in 2015 of realized losses on the bulk sale of assets. The Corporation’s effective tax rate for the first six months of 2016 was 23% (22% excluding entities from which a tax benefit cannot be recognized), which approximates the expected effective tax rate for the year, compared to 18% (30% excluding entities from which a tax benefit cannot be recognized) for the first half of 2015. As of June 30, 2016, the Corporation had a net deferred tax asset of \$299.3 million (net of a valuation allowance of \$198.2 million). Refer to “Income Taxes” below for additional information.
- As of June 30, 2016, total assets were \$12.5 billion, a decrease of \$64.3 million from December 31, 2015. The decrease was mainly due to a \$239.5 million decrease in total loans, including a \$145.8 million reduction in commercial and construction loans and a \$75.0 million decrease in consumer loans. The decrease in commercial and construction loans was mainly driven by the repayment of several large commercial loans in the first half of 2016,

Supplemental cash flow information is as follows:

including repayments totaling \$145.3 million associated with six commercial relationships, partially offset by new loan originations. The decrease in total loans was partially offset by a \$116.7 million increase in available-for-sale investment securities driven by purchases of debt securities issued or guaranteed by U.S. agencies and higher fair values on U.S. agencies MBS and debt securities. In addition, the balance of cash and cash equivalents increased by \$75.5 million primarily tied to an increase in demand deposits and proceeds from loan repayments. Refer to “Financial Condition and Operating Data” below for additional information.

- As of June 30, 2016, total liabilities were \$10.7 billion, a decrease of \$156.6 million, from December 31, 2015. The decrease was mainly due to a \$288.4 million decrease in brokered CDs, a \$10 million decrease in junior subordinated debentures associated with the repurchase and cancellation of certain trust preferred securities, and the payment of interest on trust preferred securities amounting to \$31.2 million that represents the aggregate amount of quarterly payments deferred and accrued since March 2012. As of June 30, 2016, the Corporation is current on all interest payments due related to its subordinated debt. These reductions were partially offset by a \$99.7 million increase in deposits, excluding government deposits and brokered CDs, primarily reflected in the Puerto Rico region, and a \$67.0 million increase in government deposits. Refer to “Risk Management – Liquidity and Capital Adequacy” below for additional information about the Corporation’s funding sources.

- As of June 30, 2016, the Corporation’s stockholders’ equity was \$1.8 billion, an increase of \$92.3 million from December 31, 2015. The increase was mainly driven by the net income of \$45.3 million for the first half of 2016 and a \$36.0 million increase in the fair value of available-for-sale U.S. agency MBS and debt securities recorded as part of other comprehensive income.

- The Corporation’s Total Capital, Common Equity Tier 1 Capital, Tier 1 Capital and Leverage ratios calculated under the Basel III rules were 20.72%, 17.12%, 17.12%, and 12.34%, respectively, as of June 30, 2016, compared to Total Capital, Common Equity Tier 1 Capital, Tier 1 Capital and Leverage ratios of 20.01%, 16.92%, 16.92%, and 12.22%, respectively, as of December 31,

2015. The Corporation's tangible common equity ratio increased to 13.65% as of June 30, 2016, from 12.84% as of December 31, 2015. Refer to "Risk Management – Capital" below for additional information.

- Total loan production, including purchases, refinancings, renewals and draws from existing revolving and non-revolving commitments, was \$712.8 million for the quarter ended June 30, 2016, excluding the utilization activity on outstanding credit cards, compared to \$762.5 million for the same period in 2015. The decrease was reflected in most of the principal loan categories in Puerto Rico, which showed an aggregate decrease of \$43.8 million.
- Total non-performing assets were \$756.2 million as of June 30, 2016, an increase of \$146.3 million from December 31, 2015. The increase was primarily attributable to the inflow in the first quarter of 2016 of the Corporation's exposure to commercial mortgage loans guaranteed by the Puerto Rico Tourism Development Fund ("TDF") with a book value of \$127.3 million as of June 30, 2016 and the inflow in the second quarter of 2016 of a \$35.0 million commercial relationship in Puerto Rico. The increase resulting from the inflow of large commercial loans was partially offset by reductions in non-performing residential, consumer and OREO balances. Refer to "Risk Management - Non-accruing and Non-performing Assets" below for additional information.
- Adversely classified commercial and construction loans held for investment increased by \$44.6 million to \$566.8 million as of June 30, 2016 from \$522.1 million as of December 31, 2015, including the migration to adverse classification categories of the aforementioned \$35.0 million non-performing commercial relationship in Puerto Rico.

Critical Accounting Policies and Practices

The accounting principles of the Corporation and the methods of applying these principles conform to GAAP. The Corporation's critical accounting policies relate to: 1) the allowance for loan and lease losses; 2) other-than-temporary impairments; 3) income taxes; 4) the classification and values of financial instruments; 5) income recognition on loans; 6) loans acquired; and 7) loans held for sale. These critical accounting policies involve judgments, estimates and assumptions made by management that affect the amounts recorded for assets, liabilities and contingent liabilities as of the date of the financial statements and the reported amounts of revenues and expenses during the reporting periods. Actual results could differ from estimates, if different assumptions or conditions prevail. Certain determinations inherently require greater reliance on the use of estimates, assumptions, and judgments and, as such, have a greater possibility of producing results that could be materially different than those originally reported.

The Corporation's critical accounting policies are described in Management's Discussion and Analysis of Financial Condition and Results of Operations included in First BanCorp.'s 2015 Annual Report on Form 10-K. There have not been any material changes in the Corporation's critical accounting policies since December 31, 2015.

Supplemental cash flow information is as follows:

During the second quarter of 2016, the Corporation reviewed its historical accounting treatment as loans for its \$161.3 million of financing arrangements with Puerto Rico municipalities issued in bond form, but underwritten as loans with features that are typically found in commercial loan transactions. This review came as a result of the recent determination of the Federal Reserve Board that the transactions must be treated for regulatory reporting purposes as investment securities. The Puerto Rico Municipal Finance Act (the “Act”) requires the designation of financing arrangements obtained by municipalities with maturities greater than 8 years as “special obligation bonds” subject to specific provisions under the Act. The Corporation has concluded that the impact of accounting for the transactions as investment securities rather than loans does not have a material effect on previously reported results of operations, financial condition, or cash flows and, accordingly, these financing arrangements are now accounted for and reported as held-to-maturity investment securities and not as loans as of June 30, 2016 and for prior periods.

RESULTS OF OPERATIONS

Net Interest Income

Net interest income is the excess of interest earned by First BanCorp. on its interest-earning assets over the interest incurred on its interest-bearing liabilities. First BanCorp.’s net interest income is subject to interest rate risk due to the repricing and maturity mismatch of the Corporation’s assets and liabilities. Net interest income for the quarter and six-month period ended June 30, 2016 was \$120.2 million and \$244.9 million, respectively, compared to \$126.5 million and \$252.1 million for the comparable periods in 2015. On a tax-equivalent basis, and excluding the changes in the fair value of derivative instruments, net interest income for the quarter and six-month period ended June 30, 2016 was \$123.7 million and \$253.2 million, respectively, compared to \$131.1 million and \$260.7 million for the comparable periods in 2015.

The following tables include a detailed analysis of net interest income. Part I presents average volumes and rates on an adjusted tax-equivalent basis and Part II presents, also on an adjusted tax-equivalent basis, the extent to which changes in interest rates and changes in the volume of interest-related assets and liabilities have affected the Corporation’s net interest income. For each category of

interest-earning assets and interest-bearing liabilities, information is provided on changes attributable to (i) changes in volume (changes in volume multiplied by prior period rates), and (ii) changes in rate (changes in rate multiplied by prior period volumes). Rate-volume variances (changes in rate multiplied by changes in volume) have been allocated to the changes in volume and rate based upon their respective percentage of the combined totals.

The net interest income is computed on an adjusted tax-equivalent basis and excluding the change in the fair value of derivative instruments. For a definition and reconciliation of this non-GAAP financial measure, refer to the discussions below.

Interest rate spread										3.99 %		4.12 %
Net interest margin										4.24 %		4.32 %

- (1) On an adjusted tax-equivalent basis. The adjusted tax-equivalent yield was estimated by dividing the interest rate spread on exempt assets by 1 less the Puerto Rico statutory tax rate of 39.0% and adding to it the cost of interest-bearing liabilities. The tax-equivalent adjustment recognizes the income tax savings when comparing taxable and tax-exempt assets. Management believes that it is a standard practice in the banking industry to present net interest income, interest rate spread and net interest margin on a fully tax-equivalent basis. Therefore, management believes these measures provide useful information to investors by allowing them to make peer comparisons. Changes in the fair value of derivatives are excluded from interest income and interest expense because the changes in valuation do not affect interest paid or received.
- (2) Government obligations include debt issued by government-sponsored agencies.
- (3) Unrealized gains and losses on available-for-sale securities are excluded from the average volumes.
- (4) Average loan balances include the average of non-performing loans.
- (5) Interest income on loans includes \$2.4 million and \$2.5 million for the quarters ended June 30, 2016 and 2015, respectively, and \$5.2 million for each of the six-month periods ended June 30, 2016 and 2015, of income from prepayment penalties and late fees related to the Corporation's loan portfolio.

Supplemental cash flow information is as follows:

Portions of the Corporation's interest-earning assets, mostly investments in obligations of some U.S. government agencies and sponsored entities, generate interest which is exempt from income tax, principally in Puerto Rico. Also, interest and gains on sales of investments held by the Corporation's international banking entities ("IBEs") are tax-exempt under the Puerto Rico tax law (refer to "Income Taxes" below for additional information). To facilitate the comparison of all interest data related to these assets, the interest income has been converted to an adjusted taxable equivalent basis. The tax equivalent yield was estimated by dividing the interest rate spread on exempt assets by 1 less the Puerto Rico statutory tax rate as adjusted for changes to enacted tax rates (39.0%) and adding to it the average cost of interest-bearing liabilities. The computation considers the interest expense disallowance required by Puerto Rico tax law.

The presentation of net interest income excluding the effects of the changes in the fair value of the derivative instruments ("valuations") provides additional information about the Corporation's net interest income and facilitates comparability and analysis. The changes in the fair value of the derivative instruments have no effect on interest due or interest earned on interest-bearing liabilities or interest-earning assets, respectively, or on interest payments exchanged with interest rate swap counterparties.

The following table reconciles net interest income in accordance with GAAP to net interest income, excluding valuations, and net interest income on an adjusted tax-equivalent basis. The table also reconciles net interest spread and net interest margin on a GAAP basis to these items excluding valuations and on an adjusted tax-equivalent basis:

Supplemental cash flow information is as follows:

Unrealized gains or losses on derivatives represent changes in the fair value of derivatives, primarily interest rate caps used for protection against rising interest rates.

For the quarter and six-month period ended June 30, 2016, net interest income decreased \$6.2 million to \$120.2 million, and \$7.2 million to \$244.9 million, respectively, compared to the same periods in 2015. The \$6.2 million decrease in net interest income for the second quarter of 2016, compared to the same period in 2015 was primarily due to:

- A \$3.9 million decrease in interest income on consumer loans and finance leases mainly attributable to the decrease of \$149.3 million in the average balance of this portfolio, primarily auto loans.
- A \$1.1 million decrease in interest income on commercial and construction loans, primarily reflecting a decline of \$198.5 million in the average balance of these portfolios that resulted in a decrease of approximately \$0.9 million in interest income and the adverse impact of large commercial relationships classified as non-performing in 2016, which are now accounted for on a cost-recovery basis.
- A \$1.0 million decrease in interest income on residential mortgage loans primarily reflecting both a decrease in cash collections on residential non-performing loans and a decrease of \$13.5 million in the average balance of this portfolio.

- A \$1.6 million increase in interest expense primarily reflecting: (i) a \$0.6 million increase in interest expense on repurchase agreements mainly attributable to the upward repricing of the agreements, (ii) a \$0.5 million increase in interest expense on FHLB advances primarily attributable to the \$130.0 million of advances obtained during the fourth quarter of 2015 with maturities of four years and at an average cost of 1.64%, (iii) a \$0.4 million increase in interest expense on non-brokered deposits driven by the growth and pricing of new and renewed CDs in the current interest rate environment, and (iv) a \$0.2 million increase in the interest expense on junior subordinated debentures that have been repricing at higher rates. These increases were partially offset by a \$0.2 million decrease in the interest expense on brokered CDs mainly related to the effect of the \$460.9 million decrease in the average balance, which more than offset higher costs due to both higher market interest rates, and, to a lesser extent, longer terms on new issuances compared to maturing CDs.

Partially offset by:

- A \$0.8 million increase in interest income on interest-bearing cash balances, due to the increase in fed fund rates in December 2015 and the \$280.8 million increase in the average balance of deposits maintained in the Federal Reserve Bank.
- A \$0.4 million increase in interest income on investment securities primarily due to an increase of \$114.5 million in the average balance of U.S. agencies debt securities, reflecting securities purchases in excess of investments called prior to maturity.

The \$7.2 million decrease in net interest income for the first half of 2016, compared to the same period in 2015 was primarily due to:

- A \$7.5 million decrease in interest income on consumer loans and finance leases mainly attributable to the decrease of \$151.0 million in the average balance of this portfolio, primarily auto loans.
- A \$1.7 million decrease in interest income on commercial and construction loans, primarily reflecting a decline of \$227.2 million in the average balance of these portfolios that resulted in a decrease of approximately \$2.0 million in interest income and the adverse impact of large commercial relationships classified as non-performing in 2016. Partially offsetting these variances were higher prepayments in 2016 that resulted in an increase of \$1.5 million in prepayment penalties and deferred fees amortization and the upward repricing of commercial loans tied to short-term interest rates.

Supplemental cash flow information is as follows:

- A \$0.9 million increase in interest expense primarily reflecting: (i) a \$1.1 million increase in interest expense on FHLB advances primarily attributable to the aforementioned \$130.0 million of advances obtained during the fourth quarter of 2015, and (ii) a \$0.6 million increase in interest expense on non-brokered deposits attributable to both a \$66.1 million increase in the average balance and the growth and pricing of new and renewed retail CDs at current market interest rates. These increases were partially offset by a \$0.8 million decrease in the interest expense on brokered CDs mainly related to the effect of the \$559.5 million decrease in the average balance that offset higher costs on new issuances. Over the past 12 months, the Corporation repaid \$1.7 billion of maturing brokered CDs with an all-in cost of 0.90% and new issuances amounted to \$1.2 billion with an all-in cost of 1.16%. The original average life of the brokered CDs outstanding as of June 30, 2016 was 2.4 years compared to an average life of 2.3 years a year ago.

Partially offset by:

- A \$1.0 million increase in interest income on residential mortgage loans primarily reflecting the full period impact of the loans acquired from Doral Bank in late February 2015, partially offset by lower cash collections on residential non-performing loans for which interest income is accounted for on a cash basis.
- A \$1.3 million increase in interest income on interest-bearing cash balances, due to the increase in fed fund rates in December 2015 and the \$132.1 million increase in the average balance of deposits maintained in the Federal Reserve.
- A \$0.6 million increase in interest income on investment securities mainly attributable to the \$115.1 million increase in the average balance of U.S. agencies debt securities reflecting purchases in excess of securities called prior to maturity.

The net interest margin, excluding fair value adjustments, decreased by 17 basis points to 4.01% for the second quarter of 2016 compared to the same period in 2015, and decreased by 9 basis points to 4.09% for the first six months of 2016 compared to the same period in 2015. The decrease in net interest margin for both periods was primarily driven by higher liquidity levels and the adverse impact of large commercial relationships classified as non-performing in 2016 for which interest payments are now accounted for on a cost-recovery basis.

On an adjusted tax-equivalent basis, net interest income for the quarter ended June 30, 2016 decreased by \$7.4 million to \$123.7 million when compared to the same period in 2015 and by \$7.6 million to \$253.2 million for the first six months of 2016 compared to

the same period in 2015. In addition to the facts discussed above, the decrease also includes reductions of \$1.1 million for the quarter and \$0.3 million for the six-month period in the tax-equivalent adjustment attributable to a lower volume of tax-exempt assets.

Provision for Loan and Lease Losses

The provision for loan and lease losses is charged to earnings to maintain the allowance for loan and lease losses at a level that the Corporation considers adequate to absorb probable losses inherent in the portfolio. The adequacy of the allowance for loan and lease losses is also based upon a number of additional factors, including trends in charge-offs and delinquencies, current economic conditions, the fair value of the underlying collateral and the financial condition of the borrowers, and, as such, includes amounts based on judgments and estimates made by the Corporation. Although the Corporation believes that the allowance for loan and lease losses is adequate, factors beyond the Corporation's control, including factors affecting the economies of Puerto Rico, the United States, the U.S. Virgin Islands and the British Virgin Islands, may contribute to delinquencies and defaults, thus necessitating additional reserves.

For the second quarter ended June 30, 2016, the Corporation recorded a provision for loan and lease losses of \$21.0 million compared to \$74.3 million for the same period in 2015. The provision for the second quarter of 2015 included a charge of \$46.9 million associated with the bulk sale of assets. Excluding the impact of the bulk sale of assets in the second quarter of 2015, the provision of \$21.0 million for the second quarter of 2016 decreased by \$6.4 million compared to the adjusted provision of \$27.4 million for the same period in 2015.

The decrease of \$6.4 million in the adjusted provision was driven by:

- A \$10.8 million decrease in the adjusted provision for commercial and construction loans primarily due to the impact in the second quarter of 2015 of a \$15.5 million charge to the provision as a result of the incorporation of the \$61.4 million of net charge-offs from the bulk sale in the historical loss rates used to estimate the general reserve for commercial loans collectively evaluated for impairment, partially offset by a \$1.6 million decrease in loan loss recoveries in Florida, as compared to the second quarter of 2015, and the impact in the prior year of lower historical loss rates applied to some asset classifications resulting from improvements in loans' migration experience.

Partially offset by:

- A \$2.7 million increase in the provision for residential mortgage loans, primarily due to revisions to the quarterly home price index for Puerto Rico published by the Federal Housing Finance Agency used as the basis for the estimated value of the underlying collateral of the portfolio for purposes of determining the general reserve and

Supplemental cash flow information is as follows:

updated appraisals for loans evaluated for impairment based on delinquency and loan-to-value levels.

- A \$1.7 million increase in the provision for consumer loans reflecting the impact in the second quarter of 2015 of \$2.7 million in loan loss recoveries recorded on the sale of certain fully charged-off auto and personal loans, partially offset by improvements in historical charge-off trends and the decrease in the size of this portfolio, primarily auto loans.

Net charge-offs totaled \$24.7 million for the second quarter of 2016, or 1.11% of average loans on an annualized basis, compared to \$78.8 million, or 3.41% of average loans for the same period in 2015. The bulk sale of assets added \$61.4 million in net charge-offs in the second quarter of 2015. Excluding the impact of net charge-offs related to the bulk sale of assets, the \$24.7 million of net charge-offs for the second quarter of 2016 increased by \$7.3 million compared to adjusted net charge-offs of \$17.4 million for the second quarter of 2015 primarily reflecting higher losses on residential mortgage loans

For the six-month period ended June 30, 2016, the Corporation recorded a provision for loan and lease losses of \$42.0 million compared to \$107.2 million for the same period in 2015. Excluding the impact of the bulk sale of assets in the second quarter of 2015, the provision of \$42.0 million for the first six months of 2016 decreased by \$18.3 million compared to the adjusted provision of \$60.3 million for the same period in 2015.

The decrease of \$18.3 million in the adjusted provision was driven by:

- A \$13.8 million decrease in the adjusted provision for commercial and construction loans primarily due to the aforementioned \$15.5 million charge to the provision in the second quarter of 2015 as a result of the incorporation of the \$61.4 million of net charge-offs from the bulk sale in the historical loss rates used to estimate the general reserve for commercial loans collectively evaluated for impairment and lower levels of charge-offs in the Puerto Rico region, partially offset by a \$1.7 million decrease in loan loss recoveries in Florida.
- A \$6.7 million decrease in the provision for consumer loans, primarily reflecting lower levels of charge-offs, declining loss severity rates on auto loans and the overall decrease in the size of these portfolios. Consumer loans net charge-offs decreased by \$4.0 million for the first six months of 2016 compared to the same period in 2015.

Partially offset by:

- A \$2.2 million increase in the provision for residential mortgage loans, primarily due to the aforementioned revision to the quarterly home price index for Puerto Rico and updated appraisals for loans evaluated for impairment based on delinquency and loan-to-value levels.

Refer to “Credit Risk Management” below for an analysis of the allowance for loan and lease losses, non-performing assets, impaired loans and related information, and refer to “Financial Condition and Operating Analysis – Loan Portfolio” and “Risk Management — Credit Risk Management” below for additional information concerning the Corporation’s loan portfolio exposure in the geographic areas where the Corporation does business.

Supplemental cash flow information is as follows:

Total	\$	19,778	\$	6,670	\$	38,247	\$	39,399
-------	----	--------	----	-------	----	--------	----	--------

Non-interest income primarily consists of service charges on deposit accounts; commissions derived from various banking, securities and insurance activities; gains and losses on mortgage banking activities; interchange and other fees related to debit and credit cards; and net gains and losses on investments and impairments.

Service charges on deposit accounts include monthly fees, overdraft fees and other fees on deposit accounts.

Income from mortgage banking activities includes gains on sales and securitization of loans, revenues earned for administering residential mortgage loans originated by the Corporation and subsequently sold with servicing retained, and unrealized gains and losses on forward contracts used to hedge the Corporation's securitization pipeline. In addition, lower-of-cost-or-market valuation adjustments to the Corporation's residential mortgage loans held for sale portfolio and servicing rights portfolio, if any, are recorded as part of mortgage banking activities.

Insurance income consists of insurance commissions earned by the Corporation's subsidiary, FirstBank Insurance Agency, Inc.

The other operating income category is composed of miscellaneous fees such as debit, credit card and point of sale (POS) interchange fees.

The net gain (loss) on investment securities reflects gains or losses as a result of sales that are consistent with the Corporation's investment policies as well as OTTI charges on the Corporation's investment portfolio.

The gain on early extinguishment of debt is related to the repurchase and cancellation in the first quarter of 2016 of \$10 million in trust preferred securities of the FBP Statutory Trust II that were auctioned in a public sale at which the Corporation was invited to participate. The Corporation repurchased and cancelled the repurchased trust preferred securities, resulting in a commensurate reduction in the related Floating Rate Junior Subordinated Debentures. The Corporation's winning bid equated to 70% of the \$10 million par value. The 30% discount, plus accrued interest, resulted in a gain of \$4.2 million, which is reflected in the statement of income as a "Gain on early extinguishment of debt." As of June 30, 2016, the Corporation still has Floating Rate Junior Subordinated Debentures ("subordinated debt") outstanding in the aggregate amount of \$216.2 million.

The bargain purchase gain is related to assets acquired and deposits assumed from Doral Bank in the first quarter of 2015. On February 27, 2015, FirstBank acquired 10 Puerto Rico branches of Doral Bank, assumed \$522.7 million in deposits related to such branches, acquired approximately \$324.8 million in principal balance of loans, primarily residential mortgage loans, acquired \$5.5 million of property, plant and equipment and received \$217.7 million of cash, through an alliance with Banco Popular of Puerto Rico (“Popular”), who was the successful lead bidder with the FDIC on the failed Doral Bank, as well as other co-bidders. Under the FDIC’s bidding format, Popular was the lead bidder and party to the purchase and assumption agreement with the FDIC covering all assets and deposits to be acquired by Popular and its alliance co-bidders. Popular entered into back to back purchase assumption agreements with the alliance co-bidders, including FirstBank, for the transferred assets and deposits. There is no loss-share arrangement with the FDIC related to the acquired assets, meaning that FirstBank assumed all losses with respect to such assets, with no financial assistance from the FDIC. The gain of \$13.4 million represents the excess of the estimated fair value of the assets acquired (including cash payments of \$217.7 million received from the FDIC) over the estimated fair value of the liabilities assumed.

Non-interest income for the second quarter of 2016 amounted to \$19.8 million, compared to \$6.7 million for the second quarter of 2015. The increase in non-interest income of \$13.1 million was primarily due to the following:

- The impact in the previous year second quarter of OTTI charges on debt securities amounting to \$13.1 million, primarily on three Puerto Rico Government debt securities.
- The impact in the previous year second quarter of a \$0.6 million loss on the sale of a commercial mortgage loan held for sale as part of the bulk sale of assets, included as a reduction of “Other operating income” in the table above.
- A \$0.4 million increase in service charges on deposits primarily reflecting the implementation of new service and transactional fees on certain products implemented in November 2015.
- A \$0.1 million increase in revenues from the mortgage banking business driven by a \$0.9 million increase in gains on sales of residential mortgage loans in the secondary market associated with market expectations of lower long-term interest rates that resulted in higher gain margins, partially offset by a \$0.8 million increase in losses on TBAs MBS forward contracts. Loans sold in the secondary market to U.S. government-sponsored entities amounted to \$113.2 million with a related gain of \$4.3 million in the second quarter of 2016, compared to \$121.2 million with a related gain of \$3.4 million in the comparable period of 2015.

Partially offset by:

Supplemental cash flow information is as follows:

- A \$0.5 million decrease in “other operating income” in the table above, reflecting a \$1.9 million decrease in fees from merchant transactions due to the sale of merchant contracts completed in the fourth quarter of 2015 (a reduction of approximately \$1.1 million in processing costs, depreciation and other expenses related to the sale of merchant contracts was reflected in non-interest expenses). The decrease in fees from merchant contracts was partially offset by the impact in the previous year second quarter of a \$0.6 million loss on the sale of a commercial mortgage loan held for sale as part of the bulk sale of assets and a \$0.6 million gain on the sale of fixed assets recorded in the second quarter of 2016 primarily related to a real estate property sold in the Virgin Islands.

Non-interest income for the six-month period ended June 30, 2016 amounted to \$38.2 million, compared to \$39.4 million for the same period in 2015. The \$1.2 million decrease in non-interest income was primarily due to:

- The impact in the first half of 2015 of the \$13.4 million bargain purchase gain on assets acquired and deposits assumed from Doral.
- A \$1.7 million decrease in “other operating income” in the table above, reflecting a \$3.8 million decrease in fees from merchant transactions due to the sale of merchant contracts completed in the fourth quarter of 2015 (a reduction of approximately \$2.2 million in processing costs, depreciation and other expenses related to the sale of merchant contracts was reflected in non-interest expenses). The decrease in fees from merchant contracts was partially offset by the aforementioned impact in the previous year of a \$0.6 million loss on the sale of a commercial mortgage loan held for sale included in the bulk sale of assets, the \$0.6 million gain on the sale of fixed assets recorded in the second quarter of 2016, a \$0.4 million fee income recorded in the first quarter of 2016 related to a terminated credit agreement in which the Bank was committed to purchase a loan participation and higher interchange and ATM fee income.

Partially offset by:

- A \$6.6 million decrease in OTTI charges on debt securities. During the first half of 2016, the Corporation has recorded OTTI charges of \$6.3 million on three Puerto Rico Government debt securities held by the Corporation as part of its available-for-sale securities portfolio, specifically bonds of the Government Development Bank for Puerto Rico (the

“GDB”) and the Puerto Rico Public Buildings Authority. This was the third OTTI charge on these securities recorded since June 30, 2015, as OTTI charges of \$12.9 million and \$3.0 million were booked in the second and fourth quarters of 2015, respectively. Refer to Note 4 of the Corporation’s unaudited consolidated financial statements for the quarter ended June 30, 2016 for additional information about the determination of this charge.

- The \$4.2 million gain recorded in the first quarter of 2016 on the repurchase and cancellation of \$10 million in trust preferred securities.
- A \$1.6 million increase in service charges on deposits primarily associated with the full period impact of deposits assumed from Doral Bank late in February 2015, as well as the aforementioned implementation of new service and transactional fees on certain products in November 2015.
- A \$1.3 million increase in revenues from the mortgage banking business driven by a \$2.3 million increase in gains on sales of residential mortgage loans in the secondary market associated with both a higher volume of sales and market expectations of lower long-term interest rates that resulted in higher gain margins, partially offset by a \$1.3 million increase in losses on TBAs MBS forward contracts. Loans sold in the secondary market to U.S. government-sponsored entities amounted to \$219.2 million with a related gain of \$8.6 million in the first half of 2016, compared to \$206.5 million with a related gain of \$6.3 million in the comparable period of 2015. In addition, loan servicing fees increased by \$0.2 million commensurate with the increase in the servicing portfolio.
- A \$0.3 million increase in insurance commission income.

Non-Interest Expenses										
The following table presents the detail of non-interest expenses for the periods indicated:										
		Quarter Ended June 30,				Six-Month Period Ended June 30,				
		2016		2015		2016		2015		
(In thousands)										
	Employees' compensation and benefits	\$	37,401	\$	37,945	\$	75,836	\$	73,599	
	Occupancy and equipment		13,043		15,059		27,226		29,408	
	Insurance and supervisory fees		7,066		6,796		14,409		13,656	
	Taxes, other than income taxes		3,756		3,131		7,548		6,132	

	Professional service fees:									
	Collections, appraisals and other credit-related fees	2,898		3,777		5,279			7,224	
	Outsourcing technology services	4,937		4,789		9,705			9,493	
	Other professional fees	3,492		10,439		7,119			17,506	
	Credit and debit card processing expenses	3,274		3,945		6,556			7,902	
	Business promotion	4,048		3,934		8,051			6,802	
	Communications	1,725		2,045		3,533			3,653	
	Net loss on OREO and OREO operations	3,325		4,874		6,531			7,502	
	Other	4,579		6,065		10,748			11,650	
	Total	\$ 89,544		\$ 102,799		\$ 182,541			\$ 194,527	

Non-interest expenses decreased by \$13.2 million to \$89.5 million for the second quarter of 2016 compared to \$102.8 million for the second quarter of 2015. Non-interest expenses in the second quarter of 2015 included \$1.2 million of expenses and losses related to the bulk sale of assets and costs of \$2.6 million related to the conversion of loan and deposit accounts acquired from Doral Bank to the FirstBank systems. Excluding the aforementioned items, the \$89.5 million of non-interest expenses for the second quarter of 2016 decreased by \$9.5 million compared to adjusted non-interest expenses of \$99.0 million for the same period in 2015. The decrease of \$9.5 million in adjusted non-interest expenses was principally attributable to:

- A \$4.8 million decrease in adjusted professional service fees primarily reflecting the impact in the second quarter of 2015 of interim servicing costs of \$2.4 million related to loans and deposits acquired from Doral Bank and of \$1.3 million of professional service incurred in special projects and strategic, stress testing and capital planning matters, both included as part of “other professional service fees” in the table above.
- A \$2.0 million decrease in occupancy and equipment costs reflecting reductions in depreciation, electricity and repairs expenses, including a reduction of approximately \$0.4 million related to the depreciation of POS terminals sold as part of the sale of merchant contracts in the fourth quarter of 2015.

- A \$1.3 million decrease in adjusted losses on OREO operations primarily due to lower property tax expenses.
- A \$0.7 million decrease in processing expenses mainly due to the sale of merchant contracts in the fourth quarter of 2015.
- A \$0.6 million decrease in supplies, printing and mailing costs included as part of “Other” in the table above.

Non-interest expenses decreased by \$12.0 million to \$182.5 million for the first six months of 2016 compared to \$194.5 million for the same period in 2015. Excluding the aforementioned \$1.2 million of expenses and losses related to the bulk sale of assets and \$4.6 million of acquisition and conversion costs incurred in the first half of 2015 related to the Doral Bank transaction, the \$182.5 million of non-interest expenses for the first half of 2016 decreased by \$5.9 million compared to adjusted non-interest expenses of \$188.4 million for the same period in 2015. The decrease of \$5.9 million was principally attributable to:

- A \$7.5 million decrease in adjusted professional service fees primarily reflecting the impact in the first half of 2015 of interim servicing costs of \$3.6 million related to loans and deposits acquired from Doral Bank and of \$1.3 million of professional service fees incurred with respect to special projects and strategic, stress testing and capital planning matters. In addition, collections, appraisals and other credit related professional service fees related to troubled loan resolution efforts decreased by \$1.9 million.
- A \$2.2 million decrease in occupancy and equipment costs reflecting reductions in depreciation, electricity and repairs expenses, including a reduction of approximately \$0.8 million related to the depreciation of POS terminals sold as part of the sale of merchant contracts in the fourth quarter of 2015.
- A \$1.3 million decrease in processing expenses mainly due to the sale of merchant contracts in the fourth quarter of 2015.
- A \$0.7 million decrease in adjusted losses on OREO operations primarily reflecting a \$1.1 million decrease in OREO-operating expenses, including lower property taxes, and a \$0.7 million increase in rental income associated with both a higher inventory of income-producing properties and increased activity. These decreases were partially offset by the impact in the first half of 2015 of a \$1.2 million gain realized at the time of sale of certain commercial OREO properties.

Partially offset by:

- A \$2.3 million increase in employees' compensation mainly due to merit salary increases and the full period impact of personnel costs associated with branches acquired from Doral Bank in February 2015, partially offset by decreases in incentive-based compensation due to production levels.
- A \$1.4 million increase in taxes, other than income taxes, mainly related to the increase in the sales tax rate from 7% to 11.5% effective since July 1, 2015.
- A \$1.7 million increase in business promotion expenses.
- A \$0.6 million increase in the FDIC insurance premium expense, included as part of "Insurance and Supervisory fees" in the table above, as the 2014 fourth quarter significant income is no longer part of the core earnings to average assets ratio component of the assessment that considers the most recent four quarters of earnings. In March 2016, the FDIC adopted a final rule that imposes a deposit insurance assessment surcharge on banks with at least \$10 billion in assets, of 4.5 cents per \$100 of their assessment base, after making certain adjustments. For purposes of this surcharge, the first \$10 billion of assets are subtracted from the regular insurance assessment base to determine the surcharge base. The final rule became effective on July 1, 2016 and applies to FirstBank. The FDIC also implemented a reduced initial base assessment rate, which reduce the standard risk-based assessment rate. The adoption of this rule is expected to result in a decrease on the total FDIC insurance premium expense (standard risk-based assessment + assessment surcharge expense) of approximately \$3.0 million, on an annual basis, based on the Bank's current surcharge base which is slightly higher than the \$10 billion threshold.

Income Taxes

Income tax expense includes Puerto Rico and USVI income taxes as well as applicable U.S. federal and state taxes. The Corporation is subject to Puerto Rico income tax on its income from all sources. As a Puerto Rico corporation, First BanCorp. is treated as a foreign corporation for U.S. and USVI income tax purposes and is generally subject to U.S. and USVI income tax only on its income from sources within the U.S. and USVI or income effectively connected with the conduct of a trade or business in those regions. Any tax paid in the U.S. and USVI is also creditable against the Corporation's Puerto Rico tax liability, subject to certain conditions and limitations.

Under the Puerto Rico Internal Revenue Code of 2011, as amended (the "2011 PR Code"), the Corporation and its subsidiaries are treated as separate taxable entities and are not entitled to file consolidated tax returns and, thus, the Corporation is not able to utilize losses from one subsidiary to offset gains in another subsidiary. Accordingly, in order to obtain a tax benefit from a net operating loss ("NOL"), a particular subsidiary must be able to demonstrate sufficient taxable income within the applicable NOL carry forward period. The 2011 PR Code provides a dividend received deduction of 100% on dividends received from "controlled" subsidiaries subject to taxation in Puerto Rico and 85% on dividends received from other taxable domestic corporations.

The Corporation has maintained an effective tax rate lower than the maximum statutory rate in Puerto Rico mainly by investing in government obligations and mortgage-backed securities exempt from U.S. and Puerto Rico income taxes and by doing business through an International Banking Entity ("IBE") unit of the Bank, and through the Bank's subsidiary, FirstBank Overseas Corporation, whose interest income and gain on sales is exempt from Puerto Rico income taxation. The IBE and FirstBank Overseas Corporation were created under the International Banking Entity Act of Puerto Rico, which provides for total Puerto Rico tax exemption on net income derived by IBEs operating in Puerto Rico on the specific activities identified in the IBE Act. An IBE that operates as a unit of a bank pays income taxes at the corporate standard rates to the extent that the IBE's net income exceeds 20% of the bank's total net taxable income.

As of June 30, 2016, the deferred tax assets, net of a valuation allowance of \$198.2 million, amounted to \$299.3 million and management concluded, based upon the assessment of all positive and negative evidence, that it is more likely than not that the Corporation will generate sufficient taxable income within the applicable NOL carry-forward periods to realize such amount.

The Corporation recorded an income tax expense of \$7.5 million and \$13.2 million in the second quarter and first six months of 2016, respectively, compared to an income tax benefit of \$9.8 million and \$1.8 million for the same periods in 2015. The increase in income tax expense for the quarter and first six months of 2016, as compared to the same periods in 2015, was mainly attributable to higher taxable income mainly due to the impact in 2015 of realized losses on the bulk sale of assets. For the six-month period ended June 30, 2016, the Corporation calculated the provision for income taxes by applying the estimated annual effective tax rate for the full fiscal year to ordinary income or loss.

Supplemental cash flow information is as follows:

The income tax expense as a percentage of the income before income taxes for the first half of 2016 is 23% compared to 18% for the same period in 2015. In the computation of the consolidated worldwide estimated annual effective tax rate, ASC 740-270 requires the exclusion of legal entities with pre-tax losses from which a tax benefit cannot be recognized. The consolidated worldwide estimated annual effective tax rate, excluding entities with pre-tax losses from which a tax benefit cannot be recognized, is 22% for the six-month period ended June 30, 2016, compared to 30% for the same period in 2015.

FINANCIAL CONDITION AND OPERATING DATA ANALYSIS

Assets

The Corporation's total assets were \$12.5 billion as of June 30, 2016, a decrease of \$64.3 million when compared to \$12.6 billion as of December 31, 2015. The decrease was mainly due to a \$239.5 million decrease in total loans, including a \$145.8 million reduction in commercial and construction loans and a \$75.0 million decrease in consumer loans. The decrease in total loans was partially offset by a \$116.7 million increase in available-for-sale investment securities driven by purchases of debt securities issued or guaranteed by U.S. agencies and higher fair values on U.S. agencies MBS and debt securities. In addition, the balance of cash and cash equivalents increased by \$75.5 million primarily tied to an increase in demand deposits and proceeds from loan repayments.

Loan Portfolio					
The following table presents the composition of the Corporation's loan portfolio, including loans held for sale, as of the dates indicated:					
		June 30,		December 31,	
(In thousands)		2016		2015	
Residential mortgage loans	\$	3,323,844		\$	3,344,719
Commercial loans:					
Commercial mortgage loans		1,523,676			1,537,806
Construction loans		137,406			156,195
Commercial and Industrial loans		2,133,623			2,246,513
Total commercial loans		3,794,705			3,940,514
Finance leases		230,025			229,165
Consumer loans		1,522,173			1,597,984
Total loans held for investment		8,870,747			9,112,382
Less:					
Allowance for loan and lease losses		(234,454)			(240,710)
Total loans held for investment, net	\$	8,636,293		\$	8,871,672
Loans held for sale		37,958			35,869
Total loans, net	\$	8,674,251		\$	8,907,541

Supplemental cash flow information is as follows:

As of June 30, 2016, the Corporation's total loans held for investment, net of allowance, amounted to \$8.6 billion, down \$235.4 million when compared to December 31, 2015. The decline primarily reflects a \$145.8 million decrease in the commercial and construction loan portfolio and a \$75.0 million decrease in consumer and finance leases. The decrease in the commercial and construction loan portfolio was mainly driven by the repayment of large commercial loans during the first half of 2016, including repayments totaling \$145.3 million associated with six commercial relationships, partially offset by new loan originations.

As shown in the table above, as of June 30, 2016, the loans held for investment portfolio was comprised of commercial loans (43%), residential real estate loans (37%), and consumer and finance leases (20%). Of the total gross loan portfolio held for investment of \$8.9 billion as of June 30, 2016, approximately 80% has credit risk concentration in Puerto Rico, 13% in the United States (mainly in the state of Florida) and 7% in the Virgin Islands, as shown in the following table:

As of June 30, 2016	Puerto Rico		Virgin Islands		United States		Total	
	(In thousands)

Residential Real Estate Loans

As of June 30, 2016, the Corporation's residential real estate loan portfolio held for investment decreased by \$20.9 million as compared to the balance as of December 31, 2015, mainly resulting from activities in Puerto Rico as principal repayments and charge-offs exceeded the volume of new loans originated and held for investment purposes. The residential mortgage loan portfolio held for investment in the Puerto Rico and the Virgin Islands regions decreased during the first six months of 2016 by \$42.3 million and \$5.2 million, respectively, partially offset by an increase of \$26.7 million in Florida.

The majority of the Corporation's outstanding balance of residential mortgage loans consists of fixed-rate, fully amortizing, full documentation loans. In accordance with the Corporation's underwriting guidelines, residential real estate loans are mostly fully documented loans, and the Corporation does not generally originate negative amortization loans. Refer to "Contractual Obligations and Commitments" below for additional information about outstanding commitments to sell mortgage loans.

Commercial and Construction Loans

As of June 30, 2016, the Corporation's commercial and construction loan portfolio held for investment decreased by \$145.8 million, as compared to the balance as of December 31, 2015. The reduction primarily reflects the aforementioned repayments of six large commercial relationships totaling \$145.3 million comprised of a \$34.3 million commercial credit facility in Puerto Rico, a \$60.0 million credit facility of a government-related entity in the Virgin Islands, and four commercial relationships in Florida totaling \$51.0 million.

As of June 30, 2016, the Corporation had \$145.9 million of credit facilities, excluding investment securities, extended to the Puerto Rico Government, its municipalities and public corporations, of which \$138.1 million was outstanding (book value of \$131.7 million) compared to \$153.2 million outstanding as of December 31, 2015. Approximately \$91.9 million of the granted credit facilities outstanding (\$85.6 million book value) consisted of loans to public corporations, including a direct exposure to the Puerto Rico Electric Power Authority ("PREPA") with a book value of \$68.3 million as of June 30, 2016, and approximately \$9.7 million consisted of loans to units of the Puerto Rico central government. The PREPA credit facility was placed in non-accrual status in the first quarter of 2015 and interest payments are recorded on a cost-recovery basis. In addition, the Corporation had \$36.5 million of credit facilities extended to municipalities in Puerto Rico, excluding investment securities, which in most cases are supported by assigned property tax revenues. Municipalities' revenues are independent of the Puerto Rico central government. These municipalities are required by law to levy special property taxes in such amounts as are required for the payment of all of their respective general obligation bonds and loans. Late in 2015, the GDB and the Municipal Revenue Collection Center (CRIM) signed a deed of trust. Through this deed, the GDB, as fiduciary, is bound to keep the CRIM funds separate from any other deposits and must distribute the funds pursuant to the applicable law. Refer to "Exposure to Puerto Rico Government" discussion below for information and details about the Corporation's total

Supplemental cash flow information is as follows:

direct exposure to the Puerto Rico Government.

Furthermore, as of June 30, 2016, the Corporation had \$127.3 million in financings to the hotel industry in Puerto Rico where the borrower and the operations of the underlying collateral are the primary sources of repayment and the TDF provides a secondary guarantee for payment performance, compared to \$129.4 million as of December 31, 2015. This exposure, consisting of three facilities, was placed in non-accrual status and classified as impaired in the first quarter of 2016 and interest payments are now applied against principal. Approximately \$1.0 million of interest payments received on loans guaranteed by the TDF since late March 2016 have been applied against principal. The TDF is a subsidiary of the GDB that facilitates private sector financings to Puerto Rico's hotel industry. Recent developments related to the Puerto Rico government's fiscal situation introduced additional uncertainty regarding the TDF's ability to honor its guarantee, including the enactment of the Puerto Rico Emergency Moratorium and Financial Rehabilitation Act ("Act 21"), which gives Puerto Rico's governor emergency powers to deal with Puerto Rico's challenging fiscal situation, including the ability to declare a moratorium on all bonds and other payments. On June 30, 2016, pursuant to Act 21, the Puerto Rico governor ordered a moratorium on the payment of \$780 million of the Puerto Rico Government's general obligations and the debt of certain other instrumentalities due on July 1, 2016. This followed a default on the principal payment of \$367 million of GDB notes due on May 1, 2016. Puerto Rico's governor also issued an executive order intended to protect the GDB's liquidity by allowing withdrawals only to fund necessary costs for essential services such as health, public safety and education services. Recently, the GDB defaulted on a \$28 million payment of interest due to its creditors on August 1, 2016, including interest due on GDB bonds held by the Corporation as further discussed below. As of the date of filing of this Form 10-Q, the largest of these facilities is current on contractual payments as its operations are generating the cash flows to cover payments. The Corporation has been receiving partial payments on the other two facilities insufficient to cover the contractual payment. The Corporation's collections of principal and interest from the TDF in the first half of 2016 amounted to \$0.6 million compared to \$5.3 million in the entire year 2015. These loans have been adversely classified since the third quarter of 2015.

The general reserve for commercial loans was increased in the fourth quarter of 2015 due to qualitative factors that stressed the historical loss rates applied to the Puerto Rico Government-related exposure, including the TDF-guaranteed portfolio. The migration of the loans guaranteed by the TDF to non-accrual status and impaired classification in the first quarter of 2016 did not result in a significant increase to the total allowance for loan losses. As of June 30, 2016, the total reserve coverage ratio related to commercial loans extended to or guaranteed by the Puerto Rico Government (excluding municipalities) was 19.5%.

As of June 30, 2016, the Corporation's total exposure to shared national credit ("SNC") loans amounted to \$821.1 million, compared to \$603.1 million as of December 31, 2015. As of June 30, 2016, approximately \$550.3 million of the SNC exposure is in Puerto Rico, including the \$68.3 million book value of the PREPA credit facility and \$73.4 million of the loans guaranteed by the TDF.

The Corporation has significantly reduced its exposure to construction loans and current originations are mainly draws from existing commitments.

The composition of the Corporation's construction loan portfolio held for investment as of June 30, 2016 by category and geographic location is as follows:											
As of June 30, 2016											
		Puerto Rico		Virgin Islands		United States				Total

	Under \$300k	\$	3,472
	Over \$600k (1)		2,290
		\$	5,762
(1)	One residential housing project in Puerto Rico.		

Consumer Loans and Finance Leases

As of June 30, 2016, the Corporation's consumer loan and finance lease portfolio decreased by \$75.0 million to \$1.8 billion, as compared to the portfolio balance as of December 31, 2015. The decrease was mainly the result of charge-offs and repayments that exceeded the volume of new originations. The auto loan and finance lease portfolio decreased by \$63.7 million during the first half of 2016 reflecting repayments, charge-offs and a reduced activity in new loan originations. The auto loan and finance lease portfolios in Puerto Rico amounted to \$826.5 million and \$230.0 million, respectively, as of June 30, 2016, compared to \$891.0 million and \$229.2 million, respectively, as of December 31, 2015. The remaining decrease in the consumer loan portfolio was primarily related to a \$10.6 million reduction in the credit card loan portfolio balance, and a \$4.8 million decrease in boat financings.

Loan Production

First BanCorp. relies primarily on its retail network of branches to originate residential and consumer loans. The Corporation supplements its residential mortgage originations with wholesale servicing released mortgage loan purchases from mortgage bankers. The Corporation manages its construction and commercial loan originations through centralized units and most of its originations come from existing customers as well as through referrals and direct solicitations.

The following table provides a breakdown on First BanCorp.'s loan production, including purchases, refinancings, renewals and draws from existing revolving and non-revolving commitments for the periods indicated:									
	Quarter Ended June 30,					Six-Month Period Ended June 30,			
	2016		2015		2016		2015		
	(In thousands)								

Supplemental cash flow information is as follows:

Residential real estate	\$	192,836		\$	197,459		\$	357,056		\$	350,134
C&I and commercial mortgage		383,057			414,301			728,303			809,063
Construction		4,936			14,347			7,969			23,771
Finance leases		20,193			20,697			42,136			40,353
Consumer		192,070			202,051			377,584			391,588
Total loan production	\$	793,092		\$	848,855		\$	1,513,048		\$	1,614,909

The Corporation is experiencing continued loan demand and has continued its targeted origination strategy. During the second quarter and six-month period ended June 30, 2016, total loan originations, including purchases, refinancings, and draws from existing revolving and non-revolving commitments, amounted to approximately \$793.1 million and \$1.5 billion, respectively, compared to \$848.9 million and \$1.6 billion, respectively, for the comparable periods in 2015. These statistics exclude the \$324.8 million of loans acquired from Doral Bank in February 2015.

Residential mortgage loan originations and purchases for the quarter and six-month period ended June 30, 2016 amounted to \$192.8 million and \$357.1 million, respectively, compared to \$197.5 million and \$350.1 million, respectively, for the comparable periods in 2015. These statistics include purchases of \$22.9 million and \$42.1 million for the quarter and six-month period ended June 30, 2016 compared to \$22.1 million and \$46.0 million for the comparable periods in 2015. The decrease of \$4.7 million in the second quarter of 2016, as compared to the same period of 2015, reflects a decrease of approximately \$8.4 million in the Puerto Rico region, partially offset by increases of \$2.4 million in Florida and \$1.3 million in the Virgin Islands.

Commercial and construction loan originations (excluding government loans) for the quarter and six-month period ended June 30, 2016 amounted to \$374.1 million and \$710.5 million, respectively, compared to \$422.3 million and \$807.1 million, respectively, for the comparable periods in 2015. The decrease in the 2016 periods was mainly related to a decreased volume of loan originations in the Puerto Rico region. Commercial and construction loan originations in Puerto Rico decreased by \$38.6 million and \$127.4 million for the quarter and six-month period ended June 30, 2016, respectively, as compared to the same periods in 2015. In Florida, commercial

and construction loan originations decreased by \$7.7 million for the second quarter of 2016, compared to the same period in 2015, but increased by \$37.0 million for the first six months of 2016 compared to the first six months of 2015.

Government loan originations for the second quarter of 2016 and 2015 amounted to \$13.9 million and \$6.3 million, respectively, while the originations for the six-month period ended on June 30, 2016 and 2015 remained flat at \$25.7 million. The increase in the second quarter of 2016 was driven by draws from existing credit facilities granted to the Commonwealth of Puerto Rico central government and instrumentalities.

Originations of auto loans (including finance leases) for the quarter and six-month period ended June 30, 2016 amounted to \$81.9 million and \$168.0 million, respectively, compared to \$89.4 million and \$178.6 million, respectively, for the comparable periods in 2015. The prolonged economic recession in Puerto Rico continues to put pressure on new auto sales, reflecting lower consumer confidence as a result of the prolonged economic recession in Puerto Rico partially offset by increases in Florida and the Virgin Islands region.

Personal loan originations, other than credit cards, for the quarter and six-month period ended June 30, 2016 amounted to \$50.1 million and \$96.9 million, respectively, compared to \$47.0 million and \$89.9 million, respectively, for the comparable periods in 2015. The utilization activity on the outstanding credit card portfolio for the quarter and six-month period ended June 30, 2016 amounted to approximately \$80.3 million and \$154.8 million, respectively, compared to \$86.4 million and \$163.5 million, respectively, for the comparable periods in 2015.

Investment Activities

As part of its liquidity, revenue diversification and interest rate risk strategies, First BanCorp. maintains an investment portfolio that is classified as available for sale or held to maturity. The Corporation's total available-for-sale investment securities portfolio as of June 30, 2016 amounted to \$2.0 billion, a \$116.7 million increase from December 31, 2015. The increase was mainly driven by purchases of approximately \$264.1 million of debt securities issued or guaranteed by U.S. agencies during the first half of 2016, including: (i) \$115.8 million of U.S. agencies callable debentures, (ii) \$45.8 million of SBA Guarantee Pool certificates, (iii) \$19.9 million of FHLMC guaranteed commercial mortgage-backed securities, (iv) \$39.9 million of collateralized mortgage obligations issued by GNMA, and (v) \$42.7 million of U.S. agency MBS. In addition, the fair value of available-for-sale U.S. agency MBS and debt securities increased by \$36.0 million during the first six months of 2016. These increases were partially offset by the approximately \$71.3 million of U.S. agencies debt securities called prior to maturity and U.S. agency MBS prepayments of \$108.9 million during the first half of 2016.

Approximately 97% of the Corporation's available-for-sale securities portfolio is invested in U.S. Government and Agency debentures and U.S. government-sponsored agency MBS (mainly GNMA, FNMA and FHLMC fixed-rate securities).

As mentioned above, during the first quarter of 2016, the Corporation recorded a \$6.3 million credit-related OTTI charge on three Puerto Rico Government debt securities held by the Corporation as part of its available-for-sale securities portfolio, specifically bonds of the GDB and the Puerto Rico Public Buildings Authority. This was the third OTTI charge on these securities recorded since June 30, 2015, as OTTI charges of \$12.9 million and \$3.0 million were booked in the second and fourth quarters of 2015. As of June 30, 2016, the Corporation owns Puerto Rico Government debt securities reflected in its available-for-sale portfolio in the aggregate amount of \$43.4 million (net of \$22.2 million in cumulative OTTI), carried on its books at a fair value of \$28.5 million. The GDB and the Puerto Rico Public Buildings Authority bonds held by the Corporation are scheduled to mature on February 1, 2019 and on July 1, 2028, respectively. Pursuant to the Puerto Rico Emergency Moratorium and Financial Rehabilitation Act enacted on April 6, 2016, the Puerto Rico governor issued an executive order imposing a moratorium on the debt service payment required to be paid by the GDB on May 1, 2016. The GDB paid the scheduled interest payment of \$22 million but defaulted on the principal payment of \$367 million of its notes due to other creditors on May 1, 2016 and, on August 1, 2016, GDB defaulted on a \$28 million payment of interest due to its creditors, including interest due on GDB bonds held by the Corporation. As of June 30, 2016, the Corporation had \$0.7 million of accrued interest receivable related to these bonds. The latest default in August 2016 marked the first time the GDB failed to pay interest on bonds held by the Corporation.

As of June 30, 2016, the Corporation's held-to-maturity investment securities portfolio amounted to \$161.3 million, down \$0.1 million from December 31, 2015. Held-to maturity investment securities consist of financing arrangements with Puerto Rico municipalities issued in bond form, accounted for as securities, but underwritten as loans with features that are typically found in commercial loans. These obligations typically are not issued in bearer form, are not registered with the SEC and are not rated by external credit agencies. These bonds have seniority to the payment of operating costs and expenses of the municipality and are supported by assigned property tax revenues. Approximately 87% consist of obligations issued by five of the largest municipalities in Puerto Rico (San Juan, Carolina, Bayamon, Mayaguez and Guaynabo). These municipalities are required by law to levy special property taxes in such amounts as are required for the payment of all of their respective general obligation bonds and loans.

Refer to "Exposure to Puerto Rico Government" discussion below for information and details about the Corporations total direct exposure to the Puerto Rico Government.

The following table presents the carrying value of investment securities as of the indicated dates:

100

Net interest income of future periods could be affected by prepayments of mortgage-backed securities. Acceleration in the prepayments of mortgage-backed securities would lower yields on these securities, as the amortization of premiums paid upon acquisition of these securities would accelerate. Conversely, acceleration of the prepayments of mortgage-backed securities would increase yields on securities purchased at a discount, as the amortization of the discount would accelerate. These risks are directly linked to future period market interest rate fluctuations. Also, net interest income in future periods might be affected by the Corporation's investment in callable securities. As of June 30, 2016, the Corporation has approximately \$192.5 million in debt securities (U.S. Agencies and Puerto Rico government securities) with embedded calls and with an average yield of 1.41%. Unamortized discounts on these securities amounted to approximately \$0.5 million as of June 30, 2016. Refer to "Risk Management" below for further analysis of the effects of changing interest rates on the Corporation's net interest income and of the interest rate risk management strategies followed by the Corporation. Also refer to Note 4 to the accompanying unaudited consolidated financial statements for additional information regarding the Corporation's investment portfolio.

RISK MANAGEMENT

Risks are inherent in virtually all aspects of the Corporation's business activities and operations. Consequently, effective risk management is fundamental to the success of the Corporation. The primary goals of risk management are to ensure that the Corporation's risk-taking activities are consistent with the Corporation's objectives and risk tolerance, and that there is an appropriate balance between risk and reward in order to maximize stockholder value.

The Corporation has in place a risk management framework to monitor, evaluate and manage the principal risks assumed in conducting its activities. First BanCorp.'s business is subject to eleven broad categories of risks: (1) liquidity risk; (2) interest rate risk; (3) market risk; (4) credit risk; (5) operational risk; (6) legal and compliance risk; (7) reputational risk; (8) model risk; (9) capital risk; (10) strategic risk; and (11) information technology risk. First BanCorp. has adopted policies and procedures designed to identify and manage the risks to which the Corporation is exposed.

The Corporation's risk management policies are described below as well as in the Management's Discussion and Analysis of Financial Condition and Results of Operations section of First BanCorp.'s 2015 Annual Report on Form 10-K.

Liquidity Risk and Capital Adequacy

Liquidity is the ongoing ability to accommodate liability maturities and deposit withdrawals, fund asset growth and business operations, and meet contractual obligations through unconstrained access to funding at reasonable market rates. Liquidity management involves forecasting funding requirements and maintaining sufficient capacity to meet

Supplemental cash flow information is as follows:

the needs for liquidity and accommodate fluctuations in asset and liability levels due to changes in the Corporation's business operations or unanticipated events.

The Corporation manages liquidity at two levels. The first is the liquidity of the parent company, which is the holding company that owns the banking and non-banking subsidiaries. The second is the liquidity of the banking subsidiary. As of June 30, 2016, FirstBank could not pay any dividends to the parent company except upon receipt of prior approval by the New York FED and the Federal Reserve Board because of the Written Agreement. In the second quarter of 2016, after receiving regulatory approval, FirstBank paid a \$31.2 million dividend to the Corporation sufficient to allow it to pay all accrued but deferred interest on the junior subordinated debentures associated with its trust preferred securities. It is the intent of the Corporation to request approvals in future periods to continue regularly scheduled quarterly interest payments.

The Asset and Liability Committee of the Board of Directors is responsible for establishing the Corporation's liquidity policy as well as approving operating and contingency procedures, and monitoring liquidity on an ongoing basis. The Management Investment and Asset Liability Committee ("MIALCO"), using measures of liquidity developed by management, which involve the use of several assumptions, reviews the Corporation's liquidity position on a monthly basis. The MIALCO oversees liquidity management, interest rate risk and other related matters.

The MIALCO, which reports to the Board of Directors' Asset and Liability Committee, is composed of senior management officers, including the Chief Executive Officer, the Chief Financial Officer, the Chief Risk Officer, the Retail Financial Services Director, the Risk Manager of the Treasury and Investments Division, the Financial Analysis and Asset/Liability Director and the Treasurer. The Treasury and Investments Division is responsible for planning and executing the Corporation's funding activities and strategy, monitoring liquidity availability on a daily basis and reviewing liquidity measures on a weekly basis. The Treasury and Investments Accounting and Operations area of the Comptroller's Department is responsible for calculating the liquidity measurements used by the Treasury and Investment Division to review the Corporation's liquidity position on a monthly basis; the Financial Analysis and Asset/Liability Director estimates the liquidity gap for longer periods.

In order to ensure adequate liquidity through the full range of potential operating environments and market conditions, the Corporation conducts its liquidity management and business activities in a manner that will preserve and enhance funding stability, flexibility and diversity. Key components of this operating strategy include a strong focus on the continued development of customer-

based funding, the maintenance of direct relationships with wholesale market funding providers, and the maintenance of the ability to liquidate certain assets when, and if, requirements warrant.

The Corporation develops and maintains contingency funding plans. These plans evaluate the Corporation's liquidity position under various operating circumstances and are designed to help ensure that the Corporation will be able to operate through periods of stress when access to normal sources of funds is constrained. The plans project funding requirements during a potential period of stress, specify and quantify sources of liquidity, outline actions and procedures for effectively managing through a difficult period, and define roles and responsibilities. Under the contingency funding plan, the Corporation stresses the balance sheet and the liquidity position to critical levels that imply difficulties in getting new funds or even maintaining the current funding position of the Corporation and the Bank and are designed to help ensure the ability of the Corporation and the Bank to honor its respective commitments, and establish liquidity triggers monitored by the MIALCO in order to maintain the ordinary funding of the banking business. Four different scenarios are defined in the contingency funding plan: local market event, credit rating downgrade, an economic cycle downturn event, and a concentration event. They are reviewed and approved annually by the Board of Directors' Asset and Liability Committee.

The Corporation manages its liquidity in a proactive manner, and maintains a sound liquidity position. Multiple measures are utilized to monitor the Corporation's liquidity position, including core liquidity, basic liquidity, and time-based reserve measures. As of June 30, 2016, the estimated core liquidity reserve (which includes cash and free liquid assets) was \$1.7 billion or 13.8% of total assets, compared to \$1.5 billion or 12.3% of total assets as of December 31, 2015. The basic liquidity ratio (which adds available secured lines of credit to the core liquidity) was approximately 19.1% of total assets, compared to 17.4% of total assets as of December 31, 2015. As of June 30, 2016, the Corporation had \$652.6 million available for additional credit from the FHLB of New York. Unpledged liquid securities as of June 30, 2016, mainly fixed-rate MBS and U.S. agency debentures, amounted to approximately \$705.1 million. The Corporation does not rely on uncommitted inter-bank lines of credit (federal funds lines) to fund its operations and does not include them in the basic liquidity measure. As of June 30, 2016, the holding company had \$34.5 million of cash and cash equivalents. Cash and cash equivalents at the Bank level as of June 30, 2016 were approximately \$821.1 million. The Bank has \$1.8 billion in brokered CDs as of June 30, 2016, of which approximately \$1.1 billion mature over the next twelve months. Liquidity at the Bank level is highly dependent on bank deposits, which fund 74% of the Bank's assets (or 60%, excluding brokered CDs).

Sources of Funding

The Corporation utilizes different sources of funding to help ensure that adequate levels of liquidity are available when needed. Diversification of funding sources is of great importance to protect the Corporation's liquidity from market disruptions. The principal sources of short-term funds are deposits, including brokered CDs, securities sold under agreements to repurchase, and lines of credit with the FHLB.

The Asset Liability Committee of the Board of Directors reviews credit availability on a regular basis. The Corporation has also sold mortgage loans as a supplementary source of funding. Long-term funding has also been obtained in the past through the issuance of notes and long-term brokered CDs. The cost of these different alternatives, among other things, is taken into consideration.

The Corporation has continued reducing the amounts of brokered CDs. As of June 30, 2016, the amount of brokered CDs had decreased \$288.4 million to \$1.8 billion from brokered CDs of \$2.1 billion as of December 31, 2015. At the same time as the Corporation focuses on reducing its reliance on brokered CDs, it is seeking to add core deposits. During the first half of 2016, the Corporation increased non-brokered deposits, excluding government deposits, by \$99.7 million to \$6.8 billion, primarily reflecting increases in demand deposits, savings and retail CDs in Puerto Rico.

The Corporation continues to have the support of creditors, including counterparties to repurchase agreements, the FHLB, and other agents such as wholesale funding brokers. While liquidity is an ongoing challenge for all financial institutions, management believes that the Corporation's available borrowing capacity and efforts to grow retail deposits will be adequate to provide the necessary funding for the Corporation's business plans in the foreseeable future.

The Corporation's principal sources of funding are:

Brokered CDs – A large portion of the Corporation's funding has been brokered CDs issued by FirstBank. Total brokered CDs decreased during the first half of 2016 by \$288.4 million to \$1.8 billion as of June 30, 2016.

The average remaining term to maturity of the retail brokered CD outstanding as of June 30, 2016 is approximately 1 year.

The use of brokered CDs has been particularly important for the growth of the Corporation. The Corporation encounters intense competition in attracting and retaining regular retail deposits in Puerto Rico. The brokered CD market is very competitive and liquid, and has enabled the Corporation to obtain substantial amounts of funding in short periods of time. This strategy has enhanced the Corporation's liquidity position, since brokered CDs are insured by the FDIC up to regulatory limits and can be obtained faster than regular retail deposits. During the first half of 2016, the Corporation issued \$289.4 million in brokered CDs with an average cost of 1.17% (average life of 2 years).

The following table presents a maturity summary of brokered CDs as of June 30, 2016:				
			Total	
			(In thousands)	
	Three months or less	\$	351,319	
	Over three months to six months		355,899	
	Over six months to one year		423,879	
	One to three years		608,010	
	Three to five years		69,840	
	Over five years		186	
	Total	\$	1,809,133	

Certificates of deposit in denominations of \$100,000 or higher include brokered CDs of \$1.8 billion issued to deposit brokers in the form of large (\$100,000 or more) certificates of deposit that are generally participated out by brokers in shares of less than \$100,000 and are therefore insured by the FDIC.

Government deposits – As of June 30, 2016, the Corporation had \$457.4 million of Puerto Rico public sector deposits (\$403.0 million in transactional accounts and \$54.4 million in time deposits) compared to \$390.4 million as of December 31, 2015. Approximately 39% came from municipalities and 61% came from public corporations and the central government and agencies.

In addition, as of June 30, 2016, the Corporation had \$195.4 million of government deposits in the Virgin Islands, compared to \$186.9 million as of December 31, 2015.

Retail deposits – The Corporation’s deposit products also include regular savings accounts, demand deposit accounts, money market accounts and retail CDs. Total deposits, excluding brokered CDs and government deposits, increased by \$99.7 million to \$6.8 billion from the balance of \$6.7 billion as of December 31, 2015. The higher balance reflects increases of \$168.1 million and \$15.2 million in Puerto Rico and the Virgin Islands regions, respectively, primarily increases in demand deposits and savings. These increases were partially offset by an \$83.6 million decrease in the Florida region. Refer to Note 14 in the accompanying unaudited consolidated financial statements for further details.

Refer to “Net Interest Income” above for information about average balances of interest-bearing deposits, and the average interest rate paid on deposits for the quarters and six-month periods ended June 30, 2016 and 2015.

Supplemental cash flow information is as follows:

Securities sold under agreements to repurchase - The Corporation's investment portfolio is funded in part with repurchase agreements. The Corporation's outstanding securities sold under repurchase agreements amounted to \$900 million as of June 30, 2016 and December 31, 2015. One of the Corporation's strategies has been the use of structured repurchase agreements and long-term repurchase agreements to reduce liquidity risk and manage exposure to interest rate risk by lengthening the final maturities of its liabilities while keeping funding costs at reasonable levels. In addition to these repurchase agreements, the Corporation has been able to maintain access to credit by using cost-effective sources such as FHLB advances. Refer to Note 15 in the Corporation's unaudited consolidated financial statements for the quarter and six-month period ended June 30, 2016 for further details about repurchase agreements outstanding by counterparty and maturities.

As of June 30, 2016, the Corporation had \$200 million of reverse repurchase agreements with a counterparty under a master netting arrangement that provides for a right of setoff that meets the conditions of ASC 210-20-45-11 for a net presentation. These repurchase agreements and reverse repurchase agreements are presented net on the consolidated statement of financial condition.

Under the Corporation's repurchase agreements, as is the case with derivative contracts, the Corporation is required to pledge cash or qualifying securities to meet margin requirements. To the extent that the value of securities previously pledged as collateral declines due to changes in interest rates, a liquidity crisis or any other factor, the Corporation is required to deposit additional cash or securities to meet its margin requirements, thereby adversely affecting its liquidity.

Given the quality of the collateral pledged, the Corporation has not experienced margin calls from counterparties arising from credit-quality-related write-downs in valuations.

Advances from the FHLB - The Bank is a member of the FHLB system and obtains advances to fund its operations under a collateral agreement with the FHLB that requires the Bank to maintain qualifying mortgages and/or investments as collateral for advances taken. As of June 30, 2016 and December 31, 2015, the outstanding balance of FHLB advances was \$455.0 million. As of June 30, 2016, the Corporation had \$652.6 million available for additional credit on FHLB lines of credit.

Trust-Preferred Securities – In 2004, FBP Statutory Trust I, a statutory trust that is wholly owned by the Corporation and not consolidated in the Corporation's financial statements, sold to institutional investors \$100 million of its variable rate trust-preferred securities. The proceeds of the issuance, together with the proceeds of the purchase by the Corporation of \$3.1 million of FBP Statutory Trust I variable rate common securities, were used by FBP Statutory Trust I to purchase \$103.1 million aggregate principal amount of the Corporation's Junior Subordinated Deferrable Debentures.

Also in 2004, FBP Statutory Trust II, a statutory trust that is wholly owned by the Corporation and not consolidated in the Corporation's financial statements, sold to institutional investors \$125 million of its variable rate trust-preferred securities. The proceeds of the issuance, together with the proceeds of the purchase by the Corporation of \$3.9 million of FBP Statutory Trust II variable rate common securities, were used by FBP Statutory Trust II to purchase \$128.9 million aggregate principal amount of the Corporation's Junior Subordinated Deferrable Debentures.

The subordinated debentures are presented in the Corporation's consolidated statement of financial condition as Other Borrowings. The variable rate trust-preferred securities are fully and unconditionally guaranteed by the Corporation. The \$100 million Junior Subordinated Deferrable Debentures issued by the Corporation in April 2004 and the \$125 million issued in September 2004 mature on June 17, 2034 and September 20, 2034, respectively; however, under certain circumstances, the maturity of the subordinated debentures may be shortened (such shortening would result in a mandatory redemption of the variable rate trust-preferred securities). The Collins Amendment of the Dodd-Frank Act eliminated certain trust-preferred securities from Tier 1 Capital. Bank holding companies such as the Corporation were required to fully phase out these instruments from Tier I capital in January 1, 2016; however, they may remain in Tier 2 capital until the instruments are redeemed or mature.

As mentioned above, during the first quarter of 2016, the Corporation completed the repurchase of trust preferred securities that were being auctioned in a public sale at which the Corporation was invited to participate. The Corporation repurchased and cancelled \$10 million in trust-preferred securities of FBP Statutory Trust II, resulting in a commensurate reduction in the related subordinated debenture. The Corporation's winning bid equated to 70% of the \$10 million par value. The 30% discount, plus accrued interest, resulted in a pre-tax gain of approximately \$4.2 million. As of June 30, 2016, the Corporation still has subordinated debentures outstanding in the aggregate amount of \$216.2 million.

During the second quarter of 2016, after receiving regulatory approval, the Corporation paid \$31.2 million for all the accrued but deferred interest payments plus the interest for the second quarter on the Corporation's subordinated debentures associated with its trust-preferred securities. As of June 30, 2016, the Corporation is current on all interest payments due related to its subordinated debt. Under the indentures, we have the right, from time to time, and without causing an event of default, to defer payments of interest on the subordinated debentures by extending the interest payment period at any time and from time to time during the term of the subordinated debentures for up to twenty consecutive quarterly periods. Future interest payments are subject to Federal Reserve approval. It is the intent of the Corporation to request approvals in future periods to continue regularly scheduled quarterly interest payments.

The Corporation's principal uses of funds are for the origination of loans and the repayment of maturing deposits and borrowings. The ratio of residential real estate loans to total loans has increased over time. Commensurate with the increase in its mortgage banking activities, the Corporation has also invested in technology and personnel to enhance the Corporation's secondary mortgage market capabilities.

The enhanced capabilities improve the Corporation's liquidity profile as they allow the Corporation to derive liquidity, if needed, from the sale of mortgage loans in the secondary market. The U.S. (including Puerto Rico) secondary mortgage market is still highly liquid, in large part because of the sale of mortgages through guarantee programs of the FHA, VA, HUD, FNMA and FHLMC. During the first half of 2016, the Corporation sold approximately \$146.3 million of FHA/VA mortgage loans to GNMA, which packages them into mortgage-backed securities. Any regulatory actions affecting GNMA, FNMA or FHLMC could adversely affect the secondary mortgage market.

Though currently not in use, other potential sources of short-term funding for the Corporation include commercial paper and federal funds purchased. Furthermore, in previous years, the Corporation entered into several financing transactions to diversify its funding sources, including the issuance of notes payable and junior subordinated debentures as part of its longer-term liquidity and capital management activities. No assurance can be given that these sources of liquidity will be available in the future and, if available, will be on comparable terms.

Impact of Credit Ratings on Access to Liquidity

The Corporation's liquidity is contingent upon its ability to obtain external sources of funding to finance its operations. The Corporation's current credit ratings and any downgrade in credit ratings can hinder the Corporation's access to new forms of external funding and/or cause external funding to be more expensive, which could in turn adversely affect results of operations. Also, changes in credit ratings may further affect the fair value of unsecured derivatives that consider the Corporation's own credit risk as part of the valuation.

The Corporation does not have any outstanding debt or derivative agreements that would be affected by credit downgrades. Furthermore, given our non-reliance on corporate debt or other instruments directly linked in terms of pricing or volume to credit ratings, the liquidity of the Corporation so far has not been affected in any material way by downgrades. The Corporation's ability to access new non-deposit sources of funding, however, could be adversely affected by credit downgrades.

The Corporation's credit as a long-term issuer is currently rated B+ by S&P and B- by Fitch. At the FirstBank subsidiary level, long-term issuer ratings are currently B1 by Moody's, six notches below their definition of investment grade, B+ by S&P, four notches below their definition of investment grade, and B- by Fitch, six notches below their definition of investment grade.

Cash Flows

Cash and cash equivalents were \$827.9 million as of June 30, 2016, an increase of \$75.5 million when compared to the balance as of December 31, 2015. The following discussion highlights the major activities and transactions that affected the Corporation's cash flows during the first six months of 2016 and 2015.

Cash Flows from Operating Activities

First BanCorp.'s operating assets and liabilities vary significantly in the normal course of business due to the amount and timing of cash flows. Management believes cash flows from operations, available cash balances and the Corporation's ability to generate cash through short- and long-term borrowings will be sufficient to fund the Corporation's operating liquidity needs.

For the first six months of 2016 and 2015, net cash provided by operating activities was \$82.2 million and \$132.7 million, respectively. Net cash generated from operating activities was higher than reported net income largely as a result of adjustments for operating items such as the provision for loan and lease losses, depreciation and amortization, and impairments as well as the cash generated from sales of loans held for sale.

Cash Flows from Investing Activities

The Corporation's investing activities primarily relate to originating loans to be held for investment and purchasing, selling and repaying of available-for-sale and held-to-maturity investment securities. For the six-month period ended June 30, 2016, net cash provided by investing activities was \$115.5 million, primarily reflecting principal repayments on loans held for investment and available-for-sale mortgage-backed securities.

For the first half of 2015, net cash provided by investing activities was \$458.6 million, primarily reflecting the net cash received in the Doral Bank transaction, proceeds from the bulk sale of assets and repayments of commercial and consumer loans.

Cash Flows from Financing Activities

The Corporation's financing activities primarily include the receipt of deposits and the issuance of brokered CDs, the issuance and payments of long-term debt, the issuance of equity instruments and activities related to its short-term funding. During the six-month period ended June 30, 2016, net cash used in financing activities was \$122.2 million, mainly due to repayments of maturing brokered CDS and the cash used for the repurchase and cancellation of trust preferred securities, partially offset by the increase in non-brokered deposits.

In the first six months of 2015, net cash used in financing activities was \$705.0 million, mainly due to the repayments of maturing brokered CDs and funds used in connection with \$200 million of reverse repurchase agreements entered into in April 2015.

Capital

As of June 30, 2016, the Corporation's stockholders' equity was \$1.8 billion, an increase of \$92.3 million from December 31, 2015. The increase was mainly driven by the net income of \$45.3 million for the first half of 2016 and a \$36.0 million increase in the fair value of available-for-sale U.S. agency MBS and debt securities recorded as part of other comprehensive income. As a result of the Written Agreement with the New York FED, currently neither First BanCorp. nor FirstBank is permitted to pay dividends on capital securities without prior approval.

Set forth below are First BanCorp.'s and FirstBank's regulatory capital ratios as of June 30, 2016 and December 31, 2015:							
Banking Subsidiary							
First BanCorp.				FirstBank			To be well capitalized
				Fully		Fully	
				Phased-in (1)		Phased-in (1)	
As of June 30, 2016	Actual			Actual			
Total capital ratio (Total capital to risk-weighted assets)	20.72%			20.19%			10.00%
Common Equity Tier 1 capital ratio (Common Equity Tier 1 capital to risk-weighted assets)	17.12%			16.32%			6.50%
Tier 1 capital ratio (Tier 1 capital to risk-weighted assets)	17.12%			18.92%			8.00%
Leverage ratio	12.34%			13.65%			5.00%
Banking Subsidiary							
First BanCorp.				FirstBank			To be well capitalized
				Fully		Fully	
				Phased-in (1)		Phased-in (1)	
As of December 31, 2015	Actual			Actual			
Total capital ratio (Total capital to risk-weighted assets)	20.01%			19.73%			10.00%
Common Equity Tier 1 capital ratio (Common Equity Tier 1 capital to risk-weighted assets)	16.92%			16.35%			6.50%
Tier 1 capital ratio (Tier 1 capital to risk-weighted assets)	16.92%			18.45%			8.00%
Leverage ratio	12.22%			13.33%			5.00%

Supplemental cash flow information is as follows:

(1)	Certain adjustments required under Basel III rules will be phased in through the end of 2018. The ratios shown in this column are calculated assuming that the adjustments were fully phased-in and effective as of June 30, 2016 and December 31, 2015.								

Although the Corporation and FirstBank became subject to the Basel III rules beginning on January 1, 2015, certain requirements of the Basel III rules will be phased in over several years. The phase-in period for certain deductions and adjustments to regulatory capital (such as certain intangible assets and deferred tax assets that arise from net operating losses and tax credit carryforwards) will be completed on January 1, 2018. The Corporation and FirstBank compute risk-weighted assets using the Standardized Approach required by the Basel III rules.

The Basel III rules require the Corporation to maintain an additional capital conservation buffer of 2.5% to avoid limitations on both (i) capital distributions (e.g., repurchases of capital instruments or dividend or interest payments on capital instruments) and (ii) discretionary bonus payments to executive officers and heads of major business lines. The phase-in of the capital conservation buffer began on January 1, 2016 with a first year requirement of 0.625% of additional Common Equity Tier 1 capital (“CET1”), which will be progressively increased over a four-year period, increasing by that same percentage amount on each subsequent January 1 until it reaches the fully phased-in 2.5% CET1 requirement on January 1, 2019.

Under the fully phased-in rules, the Corporation will be required to maintain: (i) a minimum CET1 capital to risk-weighted assets ratio of at least 4.5%, plus the 2.5% “capital conservation buffer,” resulting in a required minimum CET1 ratio of at least 7%, (ii) a minimum ratio of total Tier 1 capital to risk-weighted assets of at least 6.0%, plus the 2.5% capital conservation buffer, resulting in a required minimum Tier 1 capital ratio of 8.5%, (iii) a minimum ratio of total Tier 1 plus Tier 2 capital to risk-weighted assets of at least 8.0%, plus the 2.5% capital conservation buffer, resulting in a required minimum total capital ratio of 10.5%, and (iv) a required minimum leverage ratio of 4%, calculated as the ratio of Tier 1 capital to average on-balance sheet (non-risk adjusted) assets.

In addition, as required under Basel III rules, the Corporation’s trust-preferred securities (“TRuPs”) were fully phased out from Tier 1 capital on January 1, 2016. However, the Corporation’s TRuPs may continue to be included in Tier 2 capital until the instruments are redeemed or mature.

The Corporation, as an institution with more than \$10 billion but less than \$50 billion of total consolidated assets, is subject to certain requirements established by the Dodd-Frank Act, including those related to capital stress testing. The Dodd-Frank Act stress testing requirements are implemented for the Corporation through the Dodd-Frank Act stress testing requirements that apply to banking organizations with consolidated assets of more than \$10 billion and less than \$50 billion. Consistent with these requirements, the Corporation submitted its second annual company-run stress test to regulators in July 2016. The results show that even in a severely adverse economic environment, the Corporation’s and the Bank’s capital ratios exceed the well-capitalized thresholds throughout the nine-quarter horizon.

The tangible common equity ratio and tangible book value per common share are non-GAAP financial measures generally used by the financial community to evaluate capital adequacy. Tangible common equity is total equity less preferred equity, goodwill, core deposit intangibles, purchased credit card relationship asset and insurance customer relationship intangible asset. Tangible assets are total assets less goodwill, core deposit intangibles, purchased credit

Supplemental cash flow information is as follows:

card relationship and insurance customer relationship intangible assets. Refer to “Basis of Presentation” below for additional information.

The following table is a reconciliation of the Corporation's tangible common equity and tangible assets as of June 30, 2016 and December 31, 2015, respectively:

	June 30,		December 31,	
(In thousands, except ratios and per share information)	2016		2015	
Total equity - GAAP	\$	1,786,453	\$	1,694,134
Preferred equity		(36,104)		(36,104)
Goodwill		(28,098)		(28,098)
Purchased credit card relationship intangible		(11,925)		(13,319)
Core deposit intangible		(8,182)		(9,166)
Insurance customer relationship intangible		(1,003)		-
Tangible common equity	\$	1,701,141	\$	1,607,447
Total assets - GAAP	\$	12,508,702	\$	12,573,019
Goodwill		(28,098)		(28,098)
Purchased credit card relationship intangible		(11,925)		(13,319)
Core deposit intangible		(8,182)		(9,166)

Tangible common equity ratio		13.65%		12.84%
Tangible book value per common share	\$	7.83	\$	7.47

Off -Balance Sheet Arrangements

In the ordinary course of business, the Corporation engages in financial transactions that are not recorded on the balance sheet, or may be recorded on the balance sheet in amounts that are different from the full contract or notional amount of the transaction. These transactions are designed to (1) meet the financial needs of customers, (2) manage the Corporation's credit, market or liquidity risks, (3) diversify the Corporation's funding sources and (4) optimize capital.

As a provider of financial services, the Corporation routinely enters into commitments with off-balance sheet risk to meet the financial needs of its customers. These financial instruments may include loan commitments and standby

Supplemental cash flow information is as follows:

letters of credit. These commitments are subject to the same credit policies and approval process used for on-balance sheet instruments. These instruments involve, to varying degrees, elements of credit and interest rate risk in excess of the amount recognized in the statement of financial position. As of June 30, 2016, commitments to extend credit and commercial and financial standby letters of credit amounted to approximately \$1.2 billion (including \$646.3 million pertaining to credit card loans) and \$35.3 million, respectively. Commitments to extend credit are agreements to lend to customers as long as the conditions established in the contract are met. Generally, the Corporation does not enter into interest rate lock agreements with prospective borrowers in connection with mortgage banking activities.

Contractual Obligations, Commitments and Contingencies										
The following table presents the Corporation's contractual obligations and commitments, which consist of CDs, long-term contractual debt obligations, commitments to sell mortgage loans and commitments to extend credit:										
Contractual Obligations and Commitments										
As of June 30, 2016										
		Total	Less than 1 year	1-3 years	3-5 years	After 5 years				
(In thousands)										
Contractual obligations:										
Certificates of deposit	\$	4,204,643	\$	2,408,366	\$	1,548,463	\$	244,922	\$	2,892
Securities sold under agreements to repurchase (1)		700,000		400,000		100,000		-		200,000
Advances from FHLB		455,000		100,000		225,000		130,000		-
Other borrowings		216,183		-		-		-		216,183
Total contractual obligations	\$	5,575,826	\$	2,908,366	\$	1,873,463	\$	374,922	\$	419,075
Commitments to sell mortgage loans	\$	156,934								
Standby letters of credit	\$	2,620								
Commitments to extend credit:										
Lines of credit	\$	1,109,980								
Letters of credit		32,699								
Construction undisbursed funds		60,942								
Total commercial commitments	\$	1,203,621								
(1)	Reported net of reverse repurchase agreement by counterparty, when applicable, pursuant to ASC 210-20-45-11.									

The Corporation has obligations and commitments to make future payments under contracts, such as debt and lease agreements, and under other commitments to sell mortgage loans at fair value and to extend credit. Commitments to extend credit are agreements to lend to a customer as long as there is no violation of any condition established in the contract. Other contractual obligations result mainly from contracts for the rental and maintenance of equipment. Since certain commitments are expected to expire without being drawn upon, the total commitment amount does not necessarily represent future cash requirements. For most of the commercial lines of credit, the Corporation has the option to reevaluate the agreement prior to additional disbursements. There have been no significant or unexpected draws on existing commitments. In the case of credit cards and personal lines of credit, the Corporation can cancel the unused credit facility at any time and without cause.

Interest Rate Risk Management

First BanCorp. manages its asset/liability position in order to limit the effects of changes in interest rates on net interest income and to maintain stability of profitability under varying interest rate scenarios. The MIALCO oversees interest rate risk, and the MIALCO meetings focus on, among other things, current and expected conditions in world financial markets, competition and prevailing rates in the local deposit market, liquidity, the loan originations pipeline, securities market values, recent or proposed changes to the investment portfolio, alternative funding sources and related costs, hedging and the possible purchase of derivatives such as swaps and caps, and any tax or regulatory issues that may be pertinent to these areas. The MIALCO approves funding decisions in light of the Corporation's overall strategies and objectives.

On a quarterly basis, the Corporation performs a consolidated net interest income simulation analysis to estimate the potential change in future earnings from projected changes in interest rates. These simulations are carried out over a one-to-five-year time horizon, assuming upward and downward yield curve shifts. The rate scenarios considered in these simulations reflect gradual upward and downward interest rate movements of 200 basis points, during a twelve-month period. Simulations are carried out in two ways:

(1) Using a static balance sheet, as the Corporation had on the simulation date, and

(2) Using a dynamic balance sheet based on recent patterns and current strategies.

The balance sheet is divided into groups of assets and liabilities detailed by maturity or re-pricing structure and their corresponding interest yields and costs. As interest rates rise or fall, these simulations incorporate expected future lending rates, current and expected future funding sources and costs, the possible exercise of options, changes in prepayment rates, deposit decay and other factors that may be important in projecting net interest income.

Supplemental cash flow information is as follows:

The Corporation uses a simulation model to project future movements in the Corporation's balance sheet and income statement. The starting point of the projections generally corresponds to the actual values on the balance sheet on the date of the simulations.

These simulations are highly complex, and are based on many assumptions that are intended to reflect the general behavior of the balance sheet components over the period in question. It is unlikely that actual events will match these assumptions in most cases. For this reason, the results of these forward-looking computations are only approximations of the true sensitivity of net interest income to changes in market interest rates. Several benchmark and market rate curves were used in the modeling process, primarily the LIBOR/SWAP curve, Prime, U.S. Treasury, FHLB rates, brokered CD rates, repurchase agreements rates and the mortgage commitment rate of 30 years.

The 12-month net interest income is forecasted assuming the June 30, 2016 interest rate curves remain constant. Then, net interest income is estimated under rising and falling rate scenarios. For rising rate scenarios, a gradual (ramp) parallel upward shift of the yield curve is assumed during the first twelve months (the "+200 ramp" scenario). Conversely, for the falling rate scenarios, a gradual (ramp) parallel downward shift of the yield curve is assumed during the first twelve months (the "-200 ramp" scenario). However, given the current low levels of interest rates, a full downward shift of 200 basis points would represent an unrealistic scenario. Therefore, under the falling rate scenario, rates move downward up to 200 basis points, but without reaching zero. The resulting scenario shows interest rates close to zero in most cases, reflecting a flattening yield curve instead of a parallel downward scenario.

The Libor/Swap curve for June 2016, as compared to December 2015, reflected a 5 basis points increase in the short-term horizon, between one to twelve months, while market rates decreased by 63 basis points in the medium-term, that is, between 2 to 5 years. In the long-term, that is, over a 5-year time horizon, market rates decreased by 80 basis points. The U.S. Treasury curve in the short-term decreased by 4 basis points and in the medium-term horizon decreased by 68 basis points as compared to December 2015 end of month levels. The long-term horizon decreased by 77 basis points as compared to December 2015 end of month levels.

The following table presents the results of the simulations as of June 30, 2016 and December 31, 2015. Consistent with prior years, these exclude non-cash changes in the fair value of derivatives:														
June 30, 2016							December 31, 2015							
Net Interest Income Risk							Net Interest Income Risk							
(Projected for the next 12 months)							(Projected for the next 12 months)							
Static Simulation				Growing Balance Sheet			Static Simulation				Growing Balance Sheet			
(Dollars in millions)	Change	% Change		Change	% Change		Change	% Change		Change	% Change		Change	% Change
+ 200 bps ramp	\$ 15.7	3.26%		\$ 12.0	2.43%		\$ 12.6	2.51%		\$ 14.2	2.81%		\$ 14.2	2.81%
- 200 bps ramp	\$ (8.0)	(1.66)%		\$ (10.1)	(2.05)%		\$ (7.8)	(1.55)%		\$ (8.7)	(1.72)%		\$ (8.7)	(1.72)%

The Corporation continues to manage its balance sheet structure to control the overall interest rate risk. As part of the strategy to limit the interest rate risk, the Corporation has executed certain transactions that affected the simulation results. The composition of the loan portfolio has changed as compared to December 2015 end of month levels, primarily reflecting lower commercial and consumer loan balances, including repayments on six large relationships totaling \$145.3 million. However, non-performing assets increased in the first half of 2016 by \$146.3 million, primarily attributable to the inflow in the first quarter of 2016 of the Corporation's exposure to commercial mortgage loans guaranteed by the TDF with a book value of \$127.3 million as of June 30, 2016 and the inflow in the second quarter of 2016 of a \$35.0 million commercial relationship in Puerto Rico. The Corporation has continued reducing its holdings of brokered CDs, with a reduction of \$288.4 million during the first half of 2016. Total deposits, excluding brokered CDs and government deposits, increased in the first six months of 2016 by \$99.7 million, primarily reflecting increases in demand deposits, savings and retail CDs in Puerto Rico.

Taking into consideration the above-mentioned facts for modeling purposes, the net interest income for the next twelve months under a non-static balance sheet scenario is estimated to increase by \$12.0 million in the rising rate scenario when compared against the Corporation's flat or unchanged interest rate forecast scenario. Under the falling rate, non-static scenario the net interest income is estimated to decrease by \$10.1 million.

Derivatives

First BanCorp. uses derivative instruments and other strategies to manage its exposure to interest rate risk caused by changes in interest rates beyond management's control.

The following summarizes major strategies, including derivative activities, used by the Corporation in managing interest rate risk:

Interest rate cap agreements - Interest rate cap agreements provide the right to receive cash if a reference interest rate rises above a contractual rate. The value increases as the reference interest rate rises. The Corporation enters into interest rate cap agreements for protection from rising interest rates.

Forward Contracts - Forward contracts are sales of to-be announced (“TBA”) mortgage-backed securities that will settle over the standard delivery date and do not qualify as “regular way” security trades. Regular-way security trades are contracts that have no net settlement provision and no market mechanism to facilitate net settlement and provide for delivery of a security within the timeframe generally established by regulations or conventions in the market-place or exchange in which the transaction is being executed. The forward sales are considered derivative instruments that need to be marked-to-market. These securities are used to hedge the FHA/VA residential mortgage loan securitizations of the mortgage-banking operations. Unrealized gains (losses) are recognized as part of mortgage banking activities in the consolidated statement of income.

For detailed information regarding the volume of derivative activities (e.g. notional amounts), location and fair values of derivative instruments in the Statement of Financial Condition and the amount of gains and losses reported in the Statement of Income, refer to Note 10 in the accompanying unaudited consolidated financial statements.

The following tables summarize the fair value changes in the Corporation's derivatives as well as the sources of the fair values:

	Asset Derivatives		Liability Derivatives	
	Six-Month Period Ended		Six-Month Period Ended	
(In thousands)	June 30, 2016		June 30, 2016	
Fair value of contracts outstanding at the beginning of the period	\$	806	\$	(921)
Fair value of new contracts entered into during the period		19		(25)
Changes in fair value during the period		(613)		370
Fair value of contracts outstanding as of June 30, 2016	\$	212	\$	(576)

Sources of Fair Value										
Payment Due by Period										
	Maturity Less Than One Year		Maturity 1-3 Years		Maturity 3-5 Years		Maturity in Excess of 5 Years		Total Fair Value	
<i>(In thousands)</i>										
As of June 30, 2016										
Pricing from observable market inputs - Asset Derivatives	\$	-	\$	1	\$	211	\$	-	\$	212
Pricing from observable market inputs - Liability Derivatives		(359)		(1)		(216)		-		(576)
	\$	(359)	\$	-	\$	(5)	\$	-	\$	(364)

Derivative instruments, such as interest rate caps, are subject to market risk. As is the case with investment securities, the market value of derivative instruments is largely a function of the financial market's expectations regarding the future direction of interest rates. Accordingly, current market values are not necessarily indicative of the future impact of derivative instruments on earnings. This will depend, for the most part, on the level of interest rates, as well as the expectations for rates in the future.

As of June 30, 2016 and December 31, 2015, all of the derivative instruments held by the Corporation were considered economic undesignated hedges.

The use of derivatives involves market and credit risk. The market risk of derivatives stems principally from the potential for changes in the value of derivative contracts based on changes in interest rates. The credit risk of derivatives arises from the potential for default of the counterparty. To manage this credit risk, the Corporation deals with counterparties of good credit standing, enters into master netting agreements whenever possible and, when appropriate, obtains collateral. Master netting agreements incorporate rights of set-off that provide for the net settlement of contracts with the same counterparty in the event of default.

Refer to Note 20 of the accompanying unaudited consolidated financial statements for additional information regarding the fair value determination of derivative instruments.

Credit Risk Management

First BanCorp. is subject to credit risk mainly with respect to its portfolio of loans receivable and off-balance sheet instruments, mainly derivatives and loan commitments. Loans receivable represents loans that First BanCorp. holds for investment and, therefore, First BanCorp. is at risk for the term of the loan. Loan commitments represent commitments to extend credit, subject to specific conditions, for specific amounts and maturities. These commitments may expose the Corporation to credit risk and are subject to the same review and approval process as for loans. Refer to "Contractual Obligations and Commitments" above for further details. The credit risk of derivatives arises from the potential of the counterparty's default on its contractual obligations. To manage this credit risk, the Corporation deals with counterparties of good credit standing, enters into master netting agreements whenever possible and, when appropriate, obtains collateral. For further details and information on the Corporation's derivative credit risk exposure, refer to "Interest Rate Risk Management" above. The Corporation manages its credit risk through its credit policy, underwriting, independent loan review and quality control procedures, statistical analysis, comprehensive financial analysis, and established management committees. The Corporation also employs proactive collection and loss mitigation efforts. Furthermore, personnel performing structured loan workout functions are responsible for mitigating defaults and minimizing losses upon default within each region and for each business segment. In the case of the C&I, commercial mortgage and construction loan portfolios, the Special Asset Group ("SAG") focuses on strategies for the accelerated reduction of non-performing assets through note sales, short sales, loss mitigation programs, and sales of OREO. In addition to the management of the resolution process for problem loans, the SAG oversees collection

Supplemental cash flow information is as follows:

efforts for all loans to prevent migration to the non-performing and/or adversely classified status. The SAG utilizes relationship officers, collection specialists and attorneys. In the case of residential construction projects, the workout function monitors project specifics, such as project management and marketing, as deemed necessary.

The Corporation may also have risk of default in the securities portfolio. The securities held by the Corporation are principally fixed-rate U.S. agency mortgage-backed securities and U.S. Treasury and agency securities. Thus, a substantial portion of these instruments is backed by mortgages, a guarantee of a U.S. government-sponsored entity or the full faith and credit of the U.S. government.

Management, consisting of the Corporation's Commercial Credit Risk Officer, Retail Credit Risk Officer, Chief Lending Officer and other senior executives, has the primary responsibility for setting strategies to achieve the Corporation's credit risk goals and objectives. These goals and objectives are documented in the Corporation's Credit Policy.

Allowance for Loan and Lease Losses and Non-performing Assets

Allowance for Loan and Lease Losses

The allowance for loan and lease losses represents the estimate of the level of reserves appropriate to absorb inherent credit losses. The amount of the allowance was determined by empirical analysis and judgments regarding the quality of each individual loan portfolio. All known relevant internal and external factors that affected loan collectability were considered, including analyses of historical charge-off experience, migration patterns, changes in economic conditions, and changes in loan collateral values. For example, factors affecting the economies of Puerto Rico, Florida (USA), the United States Virgin Islands and the British Virgin Islands may contribute to delinquencies and defaults above the Corporation's historical loan and lease losses. Such factors are subject to regular review and may change to reflect updated performance trends and expectations, particularly in times of severe stress. The process includes judgments and quantitative elements that may be subject to significant change. There is no certainty that the allowance will be adequate over time to cover credit losses in the portfolio because of continued adverse changes in the economy, market conditions, or events adversely affecting specific customers, industries or markets. To the extent actual outcomes differ from our estimates, the credit quality of our customer base materially decreases, the risk profile of a market, industry, or group of customers changes materially, or the allowance is determined to not be adequate, additional provisions for credit losses could be required, which could adversely affect our business, financial condition, liquidity, capital, and results of operations in future periods.

The allowance for loan and lease losses provides for probable losses that have been identified with specific valuation allowances for individually evaluated impaired loans and probable losses believed to be inherent in the loan portfolio that have not been specifically identified. An internal risk rating is assigned to each business loan at the time of approval and is subject to subsequent periodic reviews by the Corporation's senior management. The allowance for loan and lease losses is reviewed on a quarterly basis as part of the Corporation's continued evaluation of its asset quality.

The ratio of the allowance for loan losses to total loans held for investment remained unchanged at 2.64% as of June 30, 2016 compared to December 31, 2015. The allowance to total loans for each of the Corporation's categories of loans changed as follows: the allowance to total loans for the C&I portfolio increased from 3.06% as of December 31, 2015 to 3.27% as of June 30, 2016; the allowance to total loans for the commercial mortgage portfolio increased from 4.44% as of December 31, 2015 to 4.58% as of June 30, 2016; the allowance to total loans for the construction loan portfolio decreased from 2.25% as of December 31, 2015 to 2.00% as of June 30, 2016; the allowance to total loans for the residential mortgage portfolio remained relatively flat at 1.17% as of June 30, 2016, compared to 1.18% as of December 31, 2015; and the allowance to total consumer and finance leases decreased from 3.32% as of December 31, 2015 to 3.03% as of June 30, 2016.

The ratio of the total allowance to non-performing loans held for investment was 39.19% as of June 30, 2016 compared to 54.36% as of December 31, 2015 primarily reflecting the migration to non-performing status in the first quarter of 2016 of the Corporation's exposure to commercial mortgage loans guaranteed by the TDF with a book value of \$127.3 million as of June 30, 2016. These loans have been adversely classified since the third quarter of 2015 and the general reserve for commercial loans was increased in the fourth quarter of 2015 due to qualitative factor adjustments applied to the Puerto Rico Government-related exposure, including this particular portfolio. The migration of the loans guaranteed by the TDF to non-performing status and classification as impaired in the first quarter of 2016 did not result in a significant increase to the total allowance for loan losses. As of June 30, 2016 the total reserve coverage ratio related to commercial loans extended to or guaranteed by the Puerto Rico Government (excluding municipalities) was 19.5%.

Substantially all of the Corporation's loan portfolio is located within the boundaries of the U.S. economy. Whether the collateral is located in Puerto Rico, the U.S. and British Virgin Islands or the U.S. mainland (mainly in the state of Florida), the performance of the Corporation's loan portfolio and the value of the collateral supporting the transactions are dependent upon the performance of and conditions within each specific area's real estate market. The real estate market in Puerto Rico experienced readjustments in value over the last few years driven by the loss of income due to higher unemployment, reduced demand and general adverse economic conditions. The Corporation sets adequate loan-to-value ratios upon original approval following its regulatory and credit policy standards.

As shown in the following table, the allowance for loan and lease losses amounted to \$234.5 million as of June 30, 2016, or 2.64% of total loans, compared with \$240.7 million, or 2.64% of total loans, as of December 31, 2015. Refer to the "Provision for Loan and Lease Losses" above for additional information.

	Quarter Ended					Six-Month Period Ended

(1) Loans used in the denominator include PCI loans of \$169.7 million and \$173.9 million as of June 30, 2016 and December 31, 2015, respectively. However, the Corporation separately tracks and reports PCI loans and excludes these loans from statistics for non-performing loans, impaired loans, Troubled Debt Restructurings ("TDRs") and non-performing assets.

The following tables show the activity for impaired loans held for investment and the related specific reserve during the quarter and six-month period ended June 30, 2016 and 2015:

	Quarter Ended				Six-Month Period Ended				
	June 30,				June 30,

As of June 30, 2016, the Corporation maintained a \$1.1 million reserve for unfunded loan commitments mainly related to an outstanding floor plan relationship. The reserve for unfunded loan commitments is an estimate of the losses inherent in off-balance sheet loan commitments to borrowers that are experiencing financial difficulties at the balance sheet date. It is calculated by multiplying an estimated loss factor by an estimated probability of funding, and then by the period-end amounts for unfunded commitments. The reserve for unfunded loan commitments is included as part of accounts payable and other liabilities in the consolidated statement of financial condition.

Non-performing Loans and Non-performing Assets

Total non-performing assets consist of non-performing loans (generally loans held for investment or loans held for sale on which the recognition of interest income has been discontinued when the loan became 90 days past due or earlier if the full and timely collection of interest or principal is uncertain), foreclosed real estate and other repossessed properties. When a loan is placed in non-performing status, any interest previously recognized and not collected is reversed and charged against interest income.

Non-performing Loans Policy

Residential Real Estate Loans — The Corporation classifies real estate loans in non-performing status when interest and principal have not been received for a period of 90 days or more.

Commercial and Construction Loans — The Corporation places commercial loans (including commercial real estate and construction loans) in non-performing status when interest and principal have not been received for a period of 90 days or more or when collection of all of the principal or interest is not expected due to deterioration in the financial condition of the borrower.

Finance Leases — Finance leases are classified in non-performing status when interest and principal have not been received for a period of 90 days or more.

Consumer Loans — Consumer loans are classified in non-performing status when interest and principal have not been received for a period of 90 days or more. Credit card loans continue to accrue finance charges and fees until charged-off at 180 days delinquent.

Purchased Credit Impaired Loans — PCI loans were recorded at fair value at acquisition. Since the initial fair value of these loans included an estimate of credit losses expected to be realized over the remaining lives of the loans, the subsequent accounting for PCI loans differs from the accounting for non-PCI loans. The Corporation, therefore, separately tracks and reports PCI loans and excludes these from its non-performing loans, impaired loans, TDRs, and

Supplemental cash flow information is as follows:

non-performing assets statistics.

Cash payments received on certain loans that are impaired and collateral dependent are recognized when collected in accordance with the contractual terms of the loans. The principal portion of the payment is used to reduce the principal balance of the loan, whereas the interest portion is recognized on a cash basis (when collected). However, when management believes that the ultimate collectability of principal is in doubt, the interest portion is applied to the outstanding principal. The risk exposure of this portfolio is diversified as to individual borrowers and industries, among other factors. In addition, a large portion is secured with real estate collateral.

Other Real Estate Owned

OREO acquired in settlement of loans is carried at the lower of cost (carrying value of the loan) or fair value less estimated costs to sell off the real estate. Appraisals are obtained periodically, generally, on an annual basis.

Other Repossessed Property

The other repossessed property category generally includes repossessed boats and autos acquired in settlement of loans. Repossessed boats and autos are recorded at the lower of cost or estimated fair value.

Past Due Loans 90 days and still accruing

These are accruing loans that are contractually delinquent 90 days or more. These past due loans are either current as to interest but delinquent as to the payment of principal or are insured or guaranteed under applicable FHA and VA programs. Past Due Loans 90 days and still accruing also include PCI loans with individual delinquencies over 90 days, primarily related to mortgage loans acquired from Doral Bank in 2015 and from Doral Financial in 2014.

TDRs are classified as either accrual or nonaccrual loans. A loan on nonaccrual and restructured as a TDR will remain on nonaccrual status until the borrower has proven the ability to perform under the modified structure, generally for a minimum of six months, and there is evidence that such payments can and are likely to continue as agreed. Performance prior to the restructuring, or significant events that coincide with the restructuring, are included in assessing whether the borrower can meet the new terms and may

result in the loans being returned to accrual at the time of the restructuring or after a shorter performance period. If the borrower's ability to meet the revised payment schedule is uncertain, the loan remains classified as a nonaccrual loan.

The following table presents non-performing assets as of the dates indicated:							
		June 30,			December 31,		
(Dollars in thousands)		2016			2015		
Non-performing loans held for investment:							
Residential mortgage	\$	164,399			\$	169,001	
Commercial mortgage		200,376				51,333	
Commercial and Industrial		154,405				137,051	
Construction		52,549				54,636	
Finance leases		2,111				2,459	
Consumer		24,354				28,293	
Total non-performing loans held for investment	\$	598,194			\$	442,773	
OREO		139,159				146,801	
Other repossessed property		10,790				12,223	
Total non-performing assets, excluding loans held for sale	\$	748,143			\$	601,797	
Non-performing loans held for sale		8,079				8,135	
Total non-performing assets, including loans held for sale (1) (2)	\$	756,222			\$	609,932	
Past due loans 90 days and still accruing (3) (4)	\$	143,811			\$	163,197	
Non-performing assets to total assets		6.05	%			4.85	%
Non-performing loans held for investment to total loans held for investment		6.74	%			4.86	%
Allowance for loan and lease losses	\$	234,454			\$	240,710	
Allowance to total non-performing loans held for investment		39.19	%			54.36	%
Allowance to total non-performing loans held for investment, excluding residential real estate loans		54.05	%			87.92	%
(1)	Purchased credit impaired loans accounted for under ASC 310-30 of \$169.7 million and \$173.9 million as of June 30, 2016 and December 31, 2015, respectively, are excluded and not considered non-performing due to the application of the accretion method, under which these loans will accrete interest income over the remaining life of the loans using estimated cash flow analysis.						

(2)	Non-performing assets exclude \$421.0 million and \$414.9 million of TDR loans that are in compliance with the modified terms and in accrual status as of June 30, 2016 and December 31, 2015, respectively.
(3)	It is the Corporation's policy to report delinquent residential mortgage loans insured by the FHA or guaranteed by the VA as past-due loans 90 days and still accruing as opposed to non-performing loans since the principal repayment is insured. These balances include \$31.7 million of residential mortgage loans insured by the FHA or guaranteed by the VA that are over 15 months delinquent, and are no longer accruing interest as of June 30, 2016.
(4)	Amount includes purchased credit impaired loans with individual delinquencies over 90 days and still accruing with a carrying value as of June 30, 2016 and December 31, 2015 of approximately \$26.5 million and \$23.2 million, respectively, primarily related to loans acquired from Doral Bank in the first quarter of 2015 and from Doral Financial in the second quarter of 2014.

Supplemental cash flow information is as follows:

Consumer		1,342			1,493
Total non-performing loans held for investment		13,798			14,786
OREO		6,260			8,222
Other repossessed property		38			76
Total non-performing assets	\$	20,096		\$	23,084
Past due loans 90 days and still accruing	\$	-		\$	109
(1)	Purchased credit impaired loans accounted for under ASC 310-30 of \$169.7 million and \$173.9 million as of June 30, 2016 and December 31, 2015, respectively, are excluded and not considered non-performing due to the application of the accretion method, under which these loans will accrete interest income over the remaining life of the loans using estimated cash flow analysis.				
(2)	Amount includes purchased credit impaired loans with individual delinquencies over 90 days and still accruing with a carrying value as of June 30, 2016 and December 31, 2015 of approximately \$26.5 million and \$23.2 million, respectively, primarily related to loans acquired from Doral Bank in the first quarter of 2015 and from Doral Financial in the second quarter of 2014.				

Total non-performing loans, including non-performing loans held for sale, were \$606.3 million as of June 30, 2016. This represents an increase of \$155.4 million from \$450.9 million as of December 31, 2015. The increase was primarily attributable to the inflow in the first quarter of 2016 of the \$128.6 million exposure to commercial mortgage loans guaranteed by the TDF and the inflow in the second quarter of 2016 of a \$35.0 million commercial relationship in Puerto Rico. The increase resulting from the inflow of large commercial loans was partially offset by reductions in non-performing residential and consumer loan balances.

Non-performing commercial mortgage loans increased by \$149.0 million to \$200.4 million as of June 30, 2016 from \$51.3 million as of December 31, 2015. The increase was primarily driven by the aforementioned inflow of the \$127.3 million exposure to loans guaranteed by the TDF and the inflow of a \$20.7 million loan that is part of the aforementioned \$35.0 million commercial relationship in Puerto Rico placed in non-performing status in the second quarter of 2016. Total inflows of non-performing commercial mortgage loans of \$157.0 million during the first six months of 2016 increased by \$147.3 million compared to inflows of \$9.7 million for the same period in 2015.

Non-performing C&I loans increased by \$17.3 million to \$154.4 million compared to \$137.1 million as of December 31, 2015. The increase was driven by the inflow of a \$14.3 million loan which is also part of the aforementioned \$35.0 million commercial relationship in Puerto Rico placed in non-performing status in the second quarter of 2016. Total inflows of non-performing C&I loans were \$31.6 million during the first six months of 2016, a decrease of \$50.5 million compared to inflows of \$82.1 million for the same period in 2015.

Non-performing construction loans, including non-performing construction loans held for sale, decreased by \$2.2 million to \$60.6 million from \$62.8 million as of December 31, 2015, primarily from a combination of cash collections, charge-offs and foreclosures. The inflows of non-performing construction loans during the first six months of 2016 amounted to \$0.6 million compared to inflows of \$0.4 million for the same period in 2015.

The following tables present the activity of commercial and construction non-performing loans held for investment:

Total non-performing commercial and construction loans, including non-performing loans held for sale, with a book value of \$415.4 million as of June 30, 2016, are being carried at 61.0% of unpaid principal balance, net of reserves and accumulated charge-offs.

Non-performing residential mortgage loans decreased by \$4.6 million to \$164.4 million as of June 30, 2016 from \$169.0 million as of December 31, 2015. The decrease was mainly driven by loans brought current, modifications through TDRs after a sustained performance period, foreclosures, and charge-offs during the first half of 2016, partially offset by inflows of \$44.9 million. The inflows of non-performing residential mortgage loans during the first half of 2016 amounted to \$44.9 million compared to inflows of \$44.3 million for the same period in 2015. Approximately \$50.0 million, or 30% of total non-performing residential mortgage loans, have been written down to their net realizable value and no specific reserve was allocated.

The following table presents the activity of residential non-performing loans held for investment:						
			Quarter Ended			Six-Month Period Ended

The amount of non-performing consumer loans, including finance leases, showed a \$4.3 million decrease during the first six months of 2016 to \$26.5 million compared to \$30.8 million as of December 31, 2015. The decrease was mainly related to charge-offs and cash collections, primarily auto loans. The inflows of non-performing consumer loans of \$21.3 million for the first six months of 2016 decreased by \$5.8 million compared to inflows of \$27.1 million for the same period in 2015.

As of June 30, 2016, approximately \$278.0 million of the loans placed in non-accrual status, mainly commercial loans, were current, or had delinquencies of less than 90 days in their interest payments, including \$120.3 million of TDRs maintained in nonaccrual status until the restructured loans meet the criteria of sustained payment performance under the revised terms for reinstatement to accrual status and there is no doubt about full collectability. Collections on these loans are being recorded on a cash basis through earnings, or on a cost-recovery basis, as conditions warrant.

During the six-month period ended June 30, 2016, interest income of approximately \$6.0 million related to non-performing loans with a carrying value of \$402.3 million as of June 30, 2016, mainly non-performing construction and commercial loans, was applied against the related principal balances under the cost-recovery method.

As of June 30, 2016, approximately \$123.0 million, or 21%, of total non-performing loans held for investment have been charged-off to their net realizable value and no specific reserve was allocated, as shown in the following table:

The Corporation provides homeownership preservation assistance to its customers through a loss mitigation program in Puerto Rico that is similar to the U.S. government's Home Affordable Modification Program guidelines. Depending upon the nature of borrowers' financial condition, restructurings or loan modifications through this program as well as other restructurings of individual commercial, commercial mortgage, construction, and residential mortgage loans in the U.S. mainland, fit the definition of a TDR. A restructuring of a debt constitutes a TDR if the creditor for economic or legal reasons related to the debtor's financial difficulties grants a concession to the debtor that it would not otherwise consider. Modifications involve changes in one or more of the loan terms that bring a defaulted loan current and provide sustainable affordability. Changes may include the refinancing of any past-due amounts, including interest and escrow, the extension of the maturity of the loan and modifications of the loan rate. As of June 30, 2016, the Corporation's total TDR loans held for investment of \$671.0 million consisted of \$381.8 million of residential mortgage loans, \$160.9 million of commercial and industrial loans, \$45.0 million of commercial mortgage loans, \$41.7 million of construction loans, and \$41.7 million of consumer loans.

The Corporation's loss mitigation programs for residential mortgage and consumer loans can provide for one or a combination of the following: movement of interest past due to the end of the loan, extension of the loan term, deferral of principal payments, and reduction of interest rates either permanently or for a period of up to four years (increasing back in step-up rates). Additionally, in certain cases, the restructuring may provide for the forgiveness of contractually due principal or interest. Uncollected interest is added to the end of the loan term at the time of the restructuring and not recognized as income until collected or when the loan is paid off. These programs are available only to those borrowers who have defaulted, or are likely to default, permanently on their loan and would lose their homes in a foreclosure action absent some lender concession. Nevertheless, if the Corporation is not reasonably assured that the borrower will comply with its contractual commitment, properties are foreclosed.

Prior to permanently modifying a loan, the Corporation may enter into trial modifications with certain borrowers. Trial modifications generally represent a six-month period during which the borrower makes monthly payments under the anticipated modified payment terms prior to a formal modification. Upon successful completion of a trial modification, the Corporation and the borrower enter into a permanent modification. TDR loans that are participating in, or that have been offered a binding trial modification are classified as TDRs when the trial offer is made and continue to be classified as TDRs regardless of whether the borrower enters into a permanent modification. As of June 30, 2016, the Corporation classified an additional \$8.3 million of residential mortgage loans as TDRs that were participating in or had been offered a trial modification.

For the commercial real estate, commercial and industrial, and construction portfolios, at the time of a restructuring, the Corporation determines, on a loan-by-loan basis, whether a concession was granted for economic or legal reasons related to the borrower's financial difficulty. Concessions granted for commercial loans could include: reductions in interest rates to rates that are considered below market; extension of repayment schedules and maturity dates beyond original contractual terms; waivers of borrower covenants; forgiveness of principal or interest; or other contractual changes that would be considered a concession. The Corporation mitigates loan defaults for its commercial loan portfolios through its collection function. The function's objective is to minimize both early stage delinquencies and losses upon default of commercial loans. In the case of the commercial and industrial, commercial mortgage, and construction loan portfolios, the SAG focuses on strategies for the accelerated reduction of non-performing assets through note sales, short sales, loss mitigation programs, and sales of OREO. In addition to the management of the

Supplemental cash flow information is as follows:

resolution process for problem loans, the SAG oversees collection efforts for all loans to prevent migration to the non-performing and/or adversely classified status. The SAG utilizes relationship officers, collection specialists, and attorneys. In the case of residential construction projects, the workout function monitors project specifics, such as project management and marketing, as deemed necessary. The SAG utilizes its collections infrastructure of workout collection officers, credit work-out specialists, in-house legal counsel, and third-party consultants. In the case of residential construction projects and large commercial loans, the SAG function also utilizes third-party specialized consultants to monitor the residential and commercial construction projects in terms of construction, marketing and sales, and to assists with the restructuring of large commercial loans.

In addition, the Corporation extends, renews, and restructures loans with satisfactory credit profiles. Many commercial loan facilities are structured as lines of credit, which are mainly one year in term and, therefore, are required to be renewed annually. Other facilities may be restructured or extended from time to time based upon changes in the borrower's business needs, use of funds, the timing of completion of projects, and other factors. If the borrower is not deemed to have financial difficulties, extensions, renewals, and restructurings are done in the normal course of business and are not considered to be concessions, and the loans continue to be recorded as performing.

TDR loans are classified as either accrual or nonaccrual loans. Loans in accrual status may remain in accrual status when their contractual terms have been modified in a TDR if the loan had demonstrated performance prior to the restructuring and payment in full under the restructured terms is expected. Otherwise, loans on non-accrual and restructured as a TDR will remain on nonaccrual status until the borrower has proven the ability to perform under the modified structure, generally for a minimum of six months, and there is evidence that such payments can and are likely to continue as agreed. Performance prior to the restructuring, or significant events that coincide with the restructuring, are included in assessing whether the borrower can meet the new terms and may result in the loan being returned to accrual status at the time of the restructuring or after a shorter performance period. If the borrower's ability to meet the revised payment schedule is uncertain, the loan remains classified as a nonaccrual loan. Loan modifications increase the Corporation's interest income by returning a non-performing loan to performing status, if applicable, increase cash flows by providing for payments to be made by the borrower, and limit increases in foreclosure and OREO costs. The Corporation continues to consider a modified loan as an impaired loan for purposes of estimating the allowance for loan and lease losses.

The following table provides a breakdown between accrual and nonaccrual status of TDRs:									
(In thousands)		June 30, 2016							
		Accrual		Nonaccrual (1)		Total TDRs			
Non-FHA/VA Residential Mortgage loans	\$	301,318		\$	80,440		\$	381,758	
Commercial Mortgage Loans		29,915			15,114			45,029	
Commercial and Industrial Loans		57,991			102,873			160,864	
Construction Loans		909			40,759			41,668	
Consumer Loans - Auto		16,320			8,050			24,370	
Finance Leases		2,244			68			2,312	
Consumer Loans - Other		12,275			2,715			14,990	
Total Troubled Debt Restructurings	\$	420,972		\$	250,019		\$	670,991	
(1)	Included in non-accrual loans are \$120.3 million in loans that are performing under the terms of the restructuring agreements but are reported in non-accrual status until the restructured loans meet the criteria of sustained payment performance under the revised terms for reinstatement to accrual status and are deemed fully collectible.								

The OREO portfolio, which is part of non-performing assets, decreased by \$7.6 million. The following table shows the activity during the six-month period ended June 30, 2016 of the OREO portfolio by geographic region and type of property:

(In thousands)	As of June 30, 2016										
	Puerto Rico			Virgin Islands			Florida			Consolidated	
	Residential	Commercial	Construction	Residential	Commercial	Construction	Residential	Commercial	Construction

Ending balance	\$ 39,051	\$ 79,795	\$ 7,403	\$ 265	\$ 1,279	\$ 5,106	\$ 3,597	\$ 980	\$ 1,683	\$ 139,159	

Net Charge-offs and Total Credit Losses

Total net charge-offs for the first six months of 2016 were \$48.3 million, or 1.08% of average loans on an annualized basis, compared to \$108.1 million, or an annualized 2.34%, for the same period in 2015. The bulk sale of assets in the second quarter of 2015 added \$61.4 million in net charge-offs for the first half of 2015. Excluding the impact of net charge-offs related to the bulk sale of assets in 2015, the \$48.3 million of net charge-offs for the first half of 2016 increased by \$1.6 million compared to adjusted net charge-offs of \$46.7 million for the first half of 2015, driven by higher losses on residential mortgage loans.

C&I loans net charge-offs in the first six months of 2016 totaled \$4.7 million, or an annualized 0.44% of related average loans, compared to \$25.8 million, or an annualized 2.27%, for the first six months of 2015. C&I loans net charge-offs in the first six months of 2015 included \$20.6 million associated with the bulk sale of assets. Excluding the impact of net charge-offs related to the bulk sale of assets in 2015, the \$4.7 million of C&I loans net charge-offs for the first half of 2016 decreased by \$0.5 million compared to adjusted C&I loans net charge-offs of \$5.2 million for the first half of 2015. Substantially all of the charge-offs recorded in the first half of 2016 are related to loans in Puerto Rico, including \$2.7 million in a charge-off on an individual loan.

Commercial mortgage loans net charge-offs in the first six months of 2016 were \$1.9 million, or an annualized 0.25% of related average loans, compared to \$43.9 million, or an annualized 5.37%, for the first six months of 2015. Commercial mortgage loans net charge-offs in the first six months of 2015 included \$37.6 million associated with the bulk sale of assets. Excluding the impact of net charge-offs related to the bulk sale of assets in 2015, the \$1.9 million of commercial mortgage loans net charge-offs for the first half of 2016 decreased by \$4.4 million compared to adjusted commercial mortgage loans net charge-offs of \$6.3 million for the first half of 2015. Most of the charge-offs recorded in the first half of 2016 are related to loans in Puerto Rico.

Construction loans net charge-offs in the first six months of 2016 were \$0.4 million, or an annualized 0.58% of related average loans, compared to \$2.5 million, or an annualized 2.90%, for the first six months of 2015. Construction loans net-charge offs in the first six months of 2015 included \$3.3 million of net charge-offs related to the bulk sale of assets. Excluding the impact of net charge-offs related to the bulk sale of assets in 2015, the \$0.4 million of construction loans net charge-offs for the first half of 2016 reflects a variance of \$1.2 million compared to adjusted construction loans net recoveries of \$0.8 million for the first half of 2015. More than a half of the net construction loans net charge-offs in 2016 was related to an individual land loan in Puerto Rico fully charged-off in the second quarter.

Residential mortgage loans net charge-offs in the first six months of 2016 were \$17.7 million, or an annualized 1.07% of related average loans, compared to \$8.4 million, or an annualized 0.52%, for the first six months of 2015. The increase in the residential mortgage loans net charge-offs is mainly due to updated appraisals. Approximately \$12.6 million in charge-offs for the first half of 2016 resulted from valuations for impairment purposes of residential mortgage loans considered homogeneous given high delinquency and loan-to-value levels compared to \$6.2 million for the first half of 2015. Net charge-offs for residential mortgage loans also included \$3.9 million related to foreclosures in the first half of 2016, compared to \$2.1 million for the first half of 2015.

Consumer and finance leases net charge-offs in the first six months of 2016 were \$23.6 million, or an annualized 2.64% of related average loans, compared to \$27.6 million, or an annualized 2.85% of average loans, in the first six months of 2015. The decrease is mainly attributable to the auto loan portfolio.

The following table presents annualized net charge-offs to average loans held-in-portfolio:												
		Quarter Ended						Six-Month Period Ended				
		June 30, 2016			June 30, 2015			June 30, 2016		June 30, 2015		
Residential mortgage loans		1.29	%		0.39	%		1.07	%		0.52	%
Commercial mortgage (1)		0.37	%		10.01	%		0.25	%		5.37	%
Commercial and industrial (2)		0.23	%		3.92	%		0.44	%		2.27	%
Construction loans (3)		1.02	%		4.90	%		0.58	%		2.90	%
Consumer loans (4)		2.48	%		2.38	%		2.64	%		2.85	%
Total loans (5)		1.11	%		3.41	%		1.08	%		2.34	%
(1)	For the quarter and six-month period ended June 30, 2015, includes net charge-offs totaling \$37.6 million associated with the bulk sale of assets. The ratio of commercial mortgage net charge-offs to average loans, excluding net charge-offs associated with the bulk sale of assets, was 0.68% and 0.82%, respectively.											
(2)	For the quarter and six-month period ended June 30, 2015, includes net charge-offs totaling \$20.6 million associated with the bulk sale of assets. The ratio of commercial and industrial net charge-offs to average loans, excluding net charge-offs associated with the bulk sale of assets, was 0.23% and 0.45%, respectively.											
(3)	For the quarter and six-month period ended June 30, 2015, includes net charge-offs totaling \$3.3 million associated with the bulk sale of assets. The ratio of construction net charge-offs to average loans, excluding net charge-offs associated with the bulk sale of assets, was (2.94)% and (0.98)%, respectively.											
(4)	Includes lease financing.											
(5)	For the quarter and six-month period ended June 30, 2015, includes net charge-offs totaling \$61.4 million associated with the bulk sale of assets. The ratio of total net charge-offs to average loans, excluding charge-offs associated with the bulk sale of assets, was 0.76% and 1.03%, respectively.											

The following table presents annualized net charge-offs (recoveries) to average loans held-in-portfolio by geographic segment:

(2)											

Supplemental cash flow information is as follows:

	For the quarter and six-month period ended June 30, 2015, includes net charge-offs totaling \$20.6 million associated with the bulk sale of assets. The ratio of commercial and industrial net charge-offs to average loans in Puerto Rico, excluding net charge-offs associated with the bulk sale of assets, was 0.25% and 0.51%, respectively.
(3)	For the quarter and six-month period ended June 30, 2015, includes net charge-offs totaling \$3.3 million associated with the bulk sale of assets. The ratio of construction net charge-offs to average loans in Puerto Rico, excluding net charge-offs associated with the bulk sale of assets, was (0.05)% and 1.11%, respectively.
(4)	Includes lease financing.
(5)	For the quarter and six-month period ended June 30, 2015, includes net charge-offs totaling \$61.4 million associated with the bulk sale of assets. The ratio of total net charge-offs to average loans in Puerto Rico, excluding net charge-offs associated with the bulk sale of assets, was 1.02% and 1.25%, respectively.
(6)	For the first six months of 2016, recoveries in commercial mortgages in the Virgin Islands exceeded charge-offs.
(7)	For the quarter and six-month period ended June 30, 2016, recoveries in commercial and industrial loans in the Virgin Islands exceeded charge-offs.
(8)	For the second quarter of 2015, recoveries in construction loans in the Virgin Islands exceeded charge-offs.
(9)	For the second quarter of 2015, recoveries in consumer loans in the Virgin Islands exceeded charge-offs.
(10)	For the second quarter and six-month period ended June 30, 2015, recoveries in residential mortgage loans in Florida exceeded charge-offs.
(11)	For the second quarter of 2016 and 2015, recoveries in commercial mortgage loans in Florida exceeded charge-offs.
(12)	For the first half of 2016, recoveries in commercial and industrial loans in Florida exceeded charge-offs.
(13)	For the second quarters and six-month periods ended June 30, 2016 and 2015, recoveries in construction loans in Florida exceeded charge-offs.
(14)	For the second quarter and six-month period ended June 30, 2015, recoveries in total loans in Florida exceeded charge-offs.

The above ratios are based on annualized charge-offs and are not necessarily indicative of the results expected for the entire year or in subsequent periods.

Total credit losses (equal to net charge-offs plus losses on OREO operations) for the first six months of 2016 amounted to \$54.8 million, or 1.35% on an annualized basis to average loans and repossessed assets, in contrast to credit losses of \$115.6 million, or 2.47% on an annual basis to average loans, for the same period in 2015.

The following table presents a detail of the OREO inventory and credit losses for the periods indicated:													
	Quarter Ended						Six-Month Period Ended

Operational Risk

The Corporation faces ongoing and emerging risk and regulatory pressure related to the activities that surround the delivery of banking and financial products. Coupled with external influences such as market conditions, security risks, and legal risks, the potential for operational and reputational loss has increased. In order to mitigate and control operational risk, the Corporation has developed, and continues to enhance, specific internal controls, policies and procedures that are designated to identify and manage operational risk at appropriate levels throughout the organization. The purpose of these mechanisms is to provide reasonable assurance that the Corporation's business operations are functioning within the policies and limits established by management.

The Corporation classifies operational risk into two major categories: business specific and corporate-wide affecting all business lines. For business specific risks, a risk assessment group works with the various business units to ensure consistency in policies, processes and assessments. With respect to corporate-wide risks, such as information security, business recovery, and legal and compliance, the Corporation has specialized groups, such as the Legal Department, Information Security, Corporate Compliance, and Operations. These groups assist the lines of business in the development and implementation of risk management practices specific to the needs of the business groups.

Legal and Compliance Risk

Legal and compliance risk includes the risk of noncompliance with applicable legal and regulatory requirements, the risk of adverse legal judgments against the Corporation, and the risk that a counterparty's performance obligations will be unenforceable. The Corporation is subject to extensive regulation in the different jurisdictions in which it conducts its business, and this regulatory scrutiny has been significantly increasing over the last several years. The Corporation has established and continues to enhance procedures based on legal and regulatory requirements that are designed to ensure compliance with all applicable statutory and regulatory requirements. The Corporation has a Compliance Director who reports to the Chief Risk Officer and is responsible for the oversight of regulatory compliance and implementation of an enterprise-wide compliance risk assessment process. The Compliance division has officer roles in each major business area with direct reporting relationships to the Corporate Compliance Group.

Concentration Risk

The Corporation conducts its operations in a geographically concentrated area, as its main market is Puerto Rico. However, the Corporation has diversified its geographical risk as evidenced by its operations in the Virgin Islands and in Florida. Of the total gross loans held for investment of \$8.9 billion as of June 30, 2016, approximately 80% have credit risk concentration in Puerto Rico, 13% in the United States, and 7% in the Virgin Islands.

Exposure to Puerto Rico Government

As of June 30, 2016, the Corporation had \$336.5 million of direct exposure to the Puerto Rico Government, its municipalities and public corporations, compared to \$360.7 million as of December 31, 2015. Approximately \$197.8 million of the exposure consisted of loans and obligations of municipalities in Puerto Rico that are supported by assigned property tax revenues and for which, in most cases, the good faith, credit and unlimited taxing power of the applicable municipality have been pledged to their repayment. Approximately 89% of the Corporation's municipality exposure consists primarily of senior priority obligations concentrated on five of the largest municipalities in Puerto Rico (San Juan, Carolina, Bayamon, Mayaguez and Guaynabo). These municipalities are required by law to levy special property taxes in such amounts as shall be required for the payment of all of their respective general obligation bonds and loans. In addition to municipalities, the total exposure to the Puerto Rico Government included \$9.7 million of loans to units of the Puerto Rico central government, and approximately \$85.6 million consisted of loans to public corporations, including a direct exposure to PREPA with a book value of \$68.3 million as of June 30, 2016. The PREPA credit facility was placed in non-accrual status in the first quarter of 2015 and interest payments are recorded on a cost-recovery basis. The Corporation's total direct exposure also includes obligations of the Puerto Rico Government with an amortized cost of \$43.4 million as part of its available-for-sale investment securities portfolio, net of \$22.2 million in cumulative OTTI charges, and recorded on its books at a fair value of \$28.5 million as of June 30, 2016.

The following table details the Corporation's total direct exposure to the Puerto Rico Government according to their maturities:

		As of June 30, 2016					
		Investment					Total
		Portfolio					Exposure
		(Amortized cost)		Loans			
		(Dollars in thousands)					
Central Government:							
	Due within one year	\$ -		\$ 2,802		\$	2,802
	After 1 to 5 years	-		6,899			6,899
	Total Central Government	-		9,701			9,701
Government Development Bank:

Municipalities:							
	Due within one year	-		6,160			6,160
	After 1 to 5 years	1,371		-			1,371

Supplemental cash flow information is as follows:

After 5 to 10 years		11,382			30,325			41,707
After 10 years		148,589			-			148,589
Total Municipalities		161,342			36,485			197,827
Total Direct Government Exposure	\$	204,789		\$	131,748		\$	336,537

Furthermore, as of June 30, 2016, the Corporation had \$127.3 million in financings to the hotel industry in Puerto Rico where the borrower and the operations of the underlying collateral are the primary sources of repayment and the TDF provides a secondary guarantee for payment performance, compared to \$129.4 million as of December 31, 2015. This exposure, consisting of three facilities, was placed in non-accrual status and classified as impaired in the first quarter of 2016 and interest payments are now applied against principal. Approximately \$1.0 million of interest payments received on loans guaranteed by the TDF since late March 2016 have been applied against principal. The TDF is a subsidiary of the GDB that facilitates private sector financings to the Puerto Rico's hotel industry. Recent developments related to the Puerto Rico government's fiscal situation introduced additional uncertainty regarding the TDF's ability to honor its guarantee, including the enactment of the Puerto Rico Emergency Moratorium and Financial Rehabilitation Act ("Act 21"), which gives Puerto Rico's governor emergency powers to deal with Puerto Rico's challenging fiscal situation, including the ability to declare a moratorium on all bonds and other payments. On June 30, 2016, pursuant to Act 21, the Puerto Rico governor ordered a moratorium on the payment of \$780 million of the Puerto Rico Government's general obligations and the debt of certain other instrumentalities due on July 1, 2016. This followed a default on the principal payment of \$367 million of GDB notes due on May 1, 2016. Puerto Rico's governor also issued an executive order intended to protect the GDB's liquidity by allowing withdrawals only to fund necessary costs for essential services such as health, public safety and education services. Recently, the GDB defaulted on a \$28 million payment of interest due to its creditors on August 1, 2016, including interest due on GDB bonds held by the Corporation. As of the date of filing of this Form 10-Q, the largest of these facilities is current on contractual payments as its operations are generating the cash flows to cover payments. The Corporation has been receiving partial payments on the other two facilities insufficient to cover the entire contractual payment. The Corporation collections of principal and interest from TDF in the first half of 2016 amounted to \$0.6 million compared to \$5.3 million in the entire year 2015. These loans have been adversely classified since the third quarter of 2015.

The general reserve for commercial loans was increased in the fourth quarter of 2015 due to qualitative factors that stressed the historical loss rates applied to the Puerto Rico Government-related exposure, including the TDF-guaranteed portfolio. The migration of the loans guaranteed by the TDF to non-accrual status and impaired classification in the first quarter of 2016 did not result in a significant increase to the total allowance for loan losses. As of June 30, 2016, the total reserve coverage ratio related to commercial loans extended to or guaranteed by the Puerto Rico Government (excluding municipalities) was 19.5%.

In addition, the Corporation had \$122.7 million in indirect exposure to residential mortgage loans that are guaranteed by the Puerto Rico Housing Finance Authority. Residential mortgage loans guaranteed by the Puerto Rico Housing Finance Authority are secured

by the underlying properties and the guarantees serve to cover shortfalls in collateral in the event of a borrower default. The Puerto Rico Government guarantees up to \$75 million of the principal insured by the mortgage loans insurance program. According to the most recently released audited financial statements of the Puerto Rico Housing Finance Authority, as of June 30, 2015, the Puerto Rico Housing Finance Authority's mortgage loans insurance program covered loans aggregating to approximately \$552 million. The regulations adopted by the Puerto Rico Housing Finance Authority require the establishment of adequate reserves to guarantee the solvency of the mortgage loans insurance fund. As of June 30, 2015, the Puerto Rico Housing Finance Authority had a restricted net position for such purposes of approximately \$77.4 million.

Furthermore, as of June 30, 2016, the Corporation had \$457.4 million of public sector deposits in Puerto Rico. Approximately 39% is from municipalities and municipal agencies in Puerto Rico and 61% is from public corporations and the central government and agencies in Puerto Rico.

Impact of Inflation and Changing Prices

The financial statements and related data presented herein have been prepared in conformity with GAAP, which requires the measurement of financial position and operating results in terms of historical dollars without considering changes in the relative purchasing power of money over time due to inflation.

Unlike most industrial companies, substantially all of the assets and liabilities of a financial institution are monetary in nature. As a result, interest rates have a greater impact on a financial institution's performance than the effects of general levels of inflation. Interest rate movements are not necessarily correlated with changes in the prices of goods and services.

Basis of Presentation

The Corporation has included in this Form 10-Q the following financial measures that are not recognized under U.S. generally accepted accounting principles, which are referred to as non-GAAP financial measures: (i) the calculation of net interest income, interest rate spread and net interest margin rate on a tax-equivalent basis and excluding changes in the fair value of derivative instruments; (ii) the calculation of the tangible common equity ratio and the tangible book value per common share; and (iii) certain other financial measures, including net income, provision for loan and lease losses, non-interest income, non-interest expenses and net charge-offs adjusted to exclude the effect of other-than-temporary impairment charges on debt securities recorded during the second quarter of 2015 and six-month periods ended June 30, 2016 and 2015, the effect of the gain on the repurchase and cancellation of \$10 million in trust-preferred securities recorded in the first half of 2016, the effect of the bulk sale of assets in the second quarter and first half of 2015, and the bargain purchase gain and acquisition and conversion costs related to the acquisition of

Supplemental cash flow information is as follows:

assets and assumption of deposits from Doral Bank recorded in the first half of 2015. Investors should be aware that non-GAAP financial measures have inherent limitations and should be read only in conjunction with the Corporation's consolidated financial data prepared in accordance with GAAP.

Net interest income, interest rate spread and net interest margin are reported excluding changes in the fair value of derivative instruments and on a tax-equivalent basis, in order to provide to investors additional information about the Corporation's net interest income that management uses and believes should facilitate comparability and analysis. The changes in the fair value of derivative instruments have no effect on interest due or interest earned on interest-bearing liabilities or interest-earning assets, respectively. The tax-equivalent adjustment to net interest income recognizes the income tax savings when comparing taxable and tax-exempt assets and assumes a marginal income tax rate. Income from tax-exempt earning assets is increased by an amount equivalent to the taxes that would have been paid if this income had been taxable at statutory rates. Management believes that it is a standard practice in the banking industry to present net interest income, interest rate spread, and net interest margin on a fully tax-equivalent basis. This adjustment puts all earning assets, most notably tax-exempt securities and certain loans, on a common basis that facilitates comparison of results to results of peers. Refer to "*Net Interest Income*" above for the table that reconciles the non-GAAP financial measure "net interest income excluding fair value changes and on a tax-equivalent basis" with net interest income calculated and presented in accordance with GAAP. The table also reconciles the non-GAAP financial measures "net interest spread and margin excluding fair value changes and on a tax-equivalent basis" with net interest spread and margin calculated and presented in accordance with GAAP.

The tangible common equity ratio and tangible book value per common share are non-GAAP financial measures generally used by the financial community to evaluate capital adequacy. Tangible common equity is total equity less preferred equity, goodwill, core deposit intangibles, and other intangibles, such as the purchased credit card relationship intangible and the insurance customer relationship intangible. Tangible assets are total assets less goodwill, core deposit intangibles, and other intangibles, such as the purchased credit card relationship intangible and the insurance customer relationship intangible. Management and many stock analysts use the tangible common equity ratio and tangible book value per common share in conjunction with more traditional bank capital ratios to compare the capital adequacy of banking organizations with significant amounts of goodwill or other intangible assets, typically stemming from the use of the purchase method of accounting for mergers and acquisitions. Accordingly, the Corporation believes that disclosures of these financial measures may be useful also to investors. Neither tangible common equity nor tangible assets, or the related measures should be considered in isolation or as a substitute for stockholders' equity, total assets, or any other measure calculated in accordance with GAAP. Moreover, the manner in which the Corporation calculates its tangible common equity,

tangible assets, and any other related measures may differ from that of other companies reporting measures with similar names. Refer to “*Risk Management-Capital*” above for a reconciliation of the Corporation’s tangible common equity and tangible assets.

To supplement the Corporation’s financial statements presented in accordance with GAAP, the Corporation uses, and believes that investors benefit from disclosure of adjustments to the provision for loan and lease losses, non-interest income, non-interest expenses, and net income to exclude items that management believes are not reflective of core operating performance, are not expected to reoccur with any regularity, or may reoccur at uncertain times and amounts. During the second quarter and first six months of 2016 and 2015, the following adjustments were made for one of those reasons:

- Adjusted provision for loan and lease losses excludes a \$46.9 million charge related to the bulk sale of assets completed in the second quarter of 2015.
- Adjusted non-interest income excludes: (i) OTTI charges on debt securities of \$6.7 million for the six-month period ended June 30, 2016, and \$13.1 million and \$13.3 million for the second quarter and six-month period ended June 30, 2015, respectively, (ii) a \$4.2 million gain on the repurchase and cancellation of trust-preferred securities recorded for the six-month period ended June 30, 2016, (iii) a \$13.4 million bargain purchase gain on assets acquired and deposits assumed from Doral Bank recorded in the six-month period ended June 30, 2015, and (iv) a \$0.6 million loss related to a commercial mortgage loan held for sale sold as part of the bulk sale of assets recorded for the quarter and six-month period ended June 30, 2015.
- Adjusted non-interest expenses excludes: (i) acquisition and conversion costs of \$2.6 million and \$4.6 million for the quarter and six-month period ended June 30, 2015, respectively, associated with the assets acquired and liabilities assumed from Doral Bank in 2015, and (ii) expenses and losses of \$1.2 million directly attributable to the bulk sale of assets recorded for the quarter and six-month period ended June 30, 2015.
- Adjusted net income excludes the effect of all the items mentioned in the above captions and their related tax effects. A \$19.0 million tax benefit related to the bulk sale of assets and transaction costs was recorded for the second quarter and six-month period ended June 30, 2015. A \$5.2 million tax expense related to the bargain purchase gain on assets acquired and liabilities assumed from Doral Bank was recorded in the six-month period ended June 30, 2016. A tax benefit of \$1.0 million and \$1.8 million was recorded for the quarter and six-month period ended June 30, 2015, respectively, related to acquisition and conversion costs associated with assets acquired and liabilities assumed from Doral Bank. The tax effect of these transactions was computed applying the Puerto Rico statutory tax rate of 39%. No tax benefit or expense was recognized for OTTI charges on debt securities and the gain on the repurchase and cancellation of trust-preferred securities.

- Adjusted net charge-offs exclude net charge-offs of \$61.4 million recorded for the quarter and six-month period ended June 30, 2015 related to the bulk sale of assets.

Management believes that disclosure of the adjusted provision for loan and lease losses, adjusted non-interest income, adjusted non-interest expenses, adjusted net income, and adjusted net charge-offs enhances the ability of analysts and investors to analyze trends in the Corporation's business and understand the performance of the Corporation. In addition, the Corporation may utilize these non-GAAP financial measures as a guide in its budgeting and long-term planning process.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

For information regarding market risk to which the Corporation is exposed, see the information contained in “Part I – Item 2 -“Management’s Discussion and Analysis of Financial Condition and Results of Operations — Risk Management.”

ITEM 4. CONTROLS AND PROCEDURES

Disclosure Control and Procedures

First BanCorp.’s management, including its Chief Executive Officer and Chief Financial Officer, evaluated the effectiveness of the design and operation of First BanCorp.’s disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act) as of June 30, 2016. Based on this evaluation, as of the end of the period covered by this Form 10-Q, the Chief Executive Officer and Chief Financial Officer concluded that the design and operation of these disclosure controls and procedures were effective.

Internal Control over Financial Reporting

There have been no changes to the Corporation’s internal control over financial reporting (as such term is defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) during the fiscal quarter to which this report relates that have materially affected, or are reasonably likely to materially affect, the Corporation’s internal control over financial reporting.

PART II - OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

Not applicable.

ITEM 1A. RISK FACTORS

The Corporation's business, operating results and/or the market price of our common and preferred stock may be significantly affected by a number of factors. For a detailed discussion of certain risk factors that could affect the Corporation's future operations, financial condition or results for future periods, see the risk factors below and in Item 1A, "Risk Factors," in the Corporation's 2015 Annual Report on Form 10-K. These factors could also cause actual results to differ materially from historical results or the results contemplated by the forward-looking statements contained in this report. Also refer to the discussion in "Part I – Item 2 – Management's Discussion and Analysis of Financial Condition and Results of Operations" in this report for additional information that may supplement or update the discussion of risk factors in the Corporation's 2015 Form 10-K.

Additional risks and uncertainties that are not currently known to the Corporation or are currently deemed by the Corporation to be immaterial also may materially adversely affect the Corporation's business, financial condition or results of operations.

The Corporation's financial results may be adversely affected by Puerto Rico's current economic condition.

A significant portion of the Corporation's financial activities and credit exposure is concentrated in the Commonwealth of Puerto Rico, which has been in an economic recession since 2006. Based on the most recent information available, the main economic indicators suggest that the Puerto Rico economy remains weak. For fiscal years 2015, 2016 and 2017, the Puerto Rico Planning Board projects a continued economic contraction in the Commonwealth's real gross national product ("GNP") of 0.6%, 1.2% and 2.0%, respectively, while the Government Development Bank of Puerto Rico's (the "GDB") economic activity index (the "GDB-EAI") in May 2016 decreased 1.8% on a year-over-year basis. The GDB-EAI is a coincident index of economic activity for Puerto Rico made up of four indicators (payroll employment, electric power generation, cement sales and gasoline consumption). The seasonally adjusted unemployment rate in Puerto Rico was 11.2% in June 2016.

Based on information published by the Puerto Rico Government, General Fund net revenues for fiscal year 2015-16 totaled approximately \$9.175 billion, a year-over-year increase of \$214.4 million. Fiscal year revenues were \$116.7 million below revised estimates.

Supplemental cash flow information is as follows:

On April 6, 2016, the Puerto Rico governor signed the Puerto Rico Emergency Moratorium and Financial Rehabilitation Act, which gives Puerto Rico's governor emergency powers to deal with the challenging fiscal situation, including the ability to declare a moratorium on any debt payment. Puerto Rico's governor also issued an executive order intended to protect the GDB's liquidity by allowing withdrawals only to fund necessary costs for essential services such as health, public safety and education services.

On May, 1 2016, pursuant to the debt moratorium law, the Puerto Rico governor issued an executive order for the moratorium on the debt service payment due by the GDB on May 1, 2016. The GDB paid the scheduled interest payment of \$22 million but defaulted on the principal payment of \$367 million on its notes due on May 1, 2016. In addition, on April 29, 2016, the GDB announced that it reached an agreement with various state-chartered credit unions in Puerto Rico to implement a limited private exchange of approximately \$33 million of notes issued by the GDB and maturing on May 1, 2016 for newly issued GDB notes with substantially the same terms, but maturing on May 1, 2017. The exchange was structured to be completed in advance of the May 1, 2016 principal payment date and settled on April 29, 2016.

On May 1, 2016, the GDB announced that it had negotiated a framework of indicative terms for a restructuring of GDB bonds with a group of bondholders (the "Ad Hoc Group") holding approximately \$900 million of the \$3.8 billion of the GDB's outstanding notes (the "Old Notes"). As part of the understanding, the Ad Hoc Group and the GDB intend to negotiate the terms and forbear from pursuing legal action related to the May 1st debt service payment during such negotiations.

The agreed key terms contemplate a two-step restructuring of the GDB's obligations, in which all holders of the Old Notes, including the Ad Hoc Group, would first exchange (the "Interim Exchange") their current holdings for new notes of the GDB, to be followed by an exchange of such new notes as part of a future global restructuring of Puerto Rico's debt that includes the GDB's debt. As part of the agreed key economic terms, creditors would agree to a haircut of 43.75% of the face amount of the Old Notes in the Interim Exchange. In addition, as part of the transaction, bondholders would agree to the proposed treatment of their notes, in a second step exchange as part of a Global Restructuring, that would result in an agreed haircut of 53% of the face amount of their Old Notes. The proposed terms of the Interim Exchange require 100% participation by all bondholders, including, in addition to the Ad Hoc Group, the state-chartered credit unions in Puerto Rico and other large institutional groups on the island.

On June 14, 2016, the Puerto Rico Government presented a revised proposal to creditors for restructuring general obligation debt, which amounted to an 81% recovery rate, up from an initial offer of 78%. As for the two classes of COFINA debt (the debt backed by sales tax receipts), the Puerto Rico Government offered a revised recovery rate of 80% on the senior COFINA bonds, up from an initial 66% recovery rate. On the subordinated COFINA bonds, the revised proposal was for a 60% recovery rate versus an initial proposal of a 47% recovery rate. Under the revised proposal, the amount of money set aside for debt servicing increased by \$17 billion to \$106.5 billion through the year 2071. Debt service costs would not exceed 18% of fiscal year 2016 adjusted revenues nor 15% in any year thereafter, assuming a nominal 2% economic growth. On June 21, 2016, the Puerto Rico Government announced that negotiations with creditors ended without an agreement to restructure.

On June 30, 2016, President Obama signed the HR 5278 Bill, the “Puerto Rico Oversight, Management, and Economic Stability Act (PROMESA), which aims to establish an oversight board, a process for restructuring debt, and expedited procedures for approving critical infrastructure projects in order to address the Puerto Rican government fiscal situation. Among the main components of the bill are:

- The creation of an Oversight Board that will consist of seven voting members, selected by the President of the United States, along with the Puerto Rico governor (or designee) who would serve as an ex-officio non-voting member. The Oversight Board will be responsible, among other things, for approving fiscal plans and budgets as well as ensuring compliance with both. It will also have the ability to facilitate debt restructuring negotiations. The members of the Oversight Board must be selected by September 2016 subject to U.S. Senate confirmation.

- Provides a mechanism for debt restructuring. Before court supervised restructuring is permitted, the Oversight Board must certify that 1) any entity has made good faith efforts to reach a voluntary restructuring, 2) the entity has adopted procedures to deliver timely audited financial statements and has delivered drafts to any interested person to make an informed decision, 3) the entity has a fiscal plan in place, and 4) no restructuring for that entity's debt is already in place. The Oversight Board then has the exclusive authority as a last resort to initiate a proceeding for a court.

- All litigation against Puerto Rico and its instrumentalities will be on hold until at least February 15, 2017 to give time for the government and debt holders to reach voluntary agreements. This does not give the government the right to skip payments.

- The Oversight Committee will also be able to approve expedited permitting and regulatory processes for specific infrastructure revitalization projects. The projects must provide economic support, have access to private capital, and address a need in Puerto Rico’s current infrastructure.

As part of PROMESA, a Congressional Task Force on Economic Growth in Puerto Rico was created. This Task Force, consisting of eight members, is instructed to, no later than September 15, 2016, provide a status report to Congress and, no later than December 31, 2016, provide a status update that includes:

- Impediments in current Federal law and programs to economic growth in Puerto Rico including equitable access to Federal health care programs;
- Recommended changes to Federal law and programs that, if adopted, would serve to spur sustainable long-term economic growth, job creation, reduce child poverty, and attract investment in Puerto Rico;
- The economic effect of Administrative Order No. 346 of the Department of Health of the Commonwealth of Puerto Rico (relating to natural products, natural supplements, and dietary supplements) or any successor or substantially similar order, rule, or guidance of the Commonwealth of Puerto Rico; and
- Additional information the Task Force deems appropriate.

On June 30, 2016, pursuant to the debt moratorium law and, after the enactment of PROMESA, the Puerto Rico governor issued two executive orders that declare a moratorium on the payment obligations of the Commonwealth under its general obligation and guaranteed debt, along with the payment obligations of certain other issuers, until January 31, 2017, implement various cash and liquidity preservation measures and protect the Commonwealth and its instrumentalities from the exercise of creditor remedies as the Commonwealth addresses its fiscal and economic challenging situation. On July 1, 2016, the Puerto Rico Government defaulted on a \$780 million payment of general obligation bonds (principal and interest, excluding general obligation notes held by the GDB). Along with the general obligations, the Puerto Rico Infrastructure Financing Authority defaulted on a \$77.1 million payment on rum-tax bonds, the Puerto Rico Highways and Transportation Authority skipped a \$4.4 million payment and the Puerto Rico Public Finance Corp. skipped a \$1.4 million payment. The GDB and Puerto Rico Public Buildings Authority bonds held by the Corporation are scheduled to mature on February 1, 2019 and on July 1, 2028, respectively.
