Press Release dated November 25, 2003 - Pan American Silver Updates Manatial Espejo Drilling

NEWS RELEASE

November 25, 2003

PAN AMERICAN UPDATES MANANTIAL ESPEJO DRILLING

Vancouver, Canada Pan American Silver Corp (NASDAQ: PAAS, TSX: PAA) is pleased to report initial results from a 4,500-meter infill and geotechnical program of diamond drilling underway at the Manantial Espejo silver-gold property in Santa Cruz province, Argentina. The completion of the infill drilling will allow a mineable reserve to be estimated for the property. Pan American Silver and Silver Standard Resources Inc.(NASDAQ: SSRI) are 50/50 joint venture partners on the property.

To date, assays have been received on 17 infill drill holes completed on the Maria Vein and one on the Melissa Vein for a total of 2,209 metres, which includes hole T-334 on the Maria Vein that intersected 11.2 metres grading 10.23 grams/tonne gold and 135.7 grams/tonne silver and hole T-343 on the Melissa Vein that intersected 13.7 metres

grading 9.61 grams/tonne gold and 542.5 grams/tonne silver. In addition, mineralization was intersected in the hanging wall of the Maria Vein in an area that had not previously been recognized as mineralized, with hole T-326 intersecting 23.4 metres grading 0.09 grams/tonne gold and 382.8 grams/tonne silver. The 18 infill drill holes completed and assayed to date bring total drilling on the property to 47,411 meters in 431 holes.

The joint venture partners have initiated a feasibility study for the property, with geotechnical work underway and environmental work to commence shortly ahead of permitting. The feasibility study is anticipated to be completed in late 2004 or early 2005.

At December 31, 2002, the Manantial Espejo project contained measured and indicated resources totaling 4.39 million tonnes grading 263.8 grams/tonne silver and 4.5 grams/tonne gold. Inferred resources total an additional 1.59 million tonnes grading 258.5 grams/tonne silver and 3.7 grams/tonne gold. C. Stewart Wallis, P.G., P.Geo., is the independent qualified person for the Manantial Espejo resource review. An updated resource estimate that incorporates results of infill drilling at the Maria and Melissa veins will be prepared following completion of the infill drill program.

CAUTIONARY NOTE

Some of the statements in this news release are forward-looking statements and as such are based on an assumed set of economic conditions and courses of action. These include estimates of future production levels, expectations regarding mine production costs, expected trends in mineral prices and statements that describe Pan American's future plans, objectives or goals. There is a significant risk that actual results will vary, perhaps materially, from results projected depending on such factors as changes in general economic conditions and financial markets, changes in prices for silver and other metals, technological and operational hazards in Pan American's mining and mine development activities, uncertainties inherent in the calculation of mineral reserves, mineral resources and metal recoveries, the timing and availability of financing, governmental and other approvals, political unrest or instability in countries where Pan American is active, labor relations and other risk factors listed from time to time in Pan American's Form 40-F.
