SECURITIES AND EXCHANGE COMMISSION
WASHINGTON, D.C. 20549

FORM 10-K

(Mark One)

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934
For the fiscal year ended December 31, 2007

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT
For the transition period from _____ to _____

Commission file number: 0-27527

Plug Power Inc.

(Exact Name of Registrant as Specified in Its Charter)

Delaware	22-3672377
(State or Other Jurisdiction)	(I.R.S. Identification
of Incorporation or Organization)	Number)
968 ALBANY-SHAKER ROAD, LATHAM, NEW YORK 12110	

Edgar Filing: PLUG POWER INC - Form 10-K

(Address of Principal Executive Offices, including Zip Code)

(518) 782-7700

(Registrant's telephone number, including area code)

Securities registered pursuant to Section 12(b) of the Act:

Title of Each Class	Name of Each Exchange on Which Registered
Common stock, par value \$.01 per share	The NASDAQ Global Market

Securities registered pursuant to Section 12(g) of the Act: None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by a check mark whether the Registrant (1) has filed all reports required to be filed by Sections 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for shorter period that the Registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of the Registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or an amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of large accelerated filer, accelerated filer, non-accelerated filer, and smaller reporting company in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

The aggregate market value of the voting stock of the Registrant held by non-affiliates of the Registrant on June 30, 2007 was \$98.7 million.

As of March 7, 2008, 88,040,194 shares of the Registrant's Common Stock were issued and outstanding.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the definitive proxy statement relating to the Registrant's 2008 Annual Meeting of stockholders are incorporated by reference into Part III of this report to the extent described therein.

Table of Contents**PART I****Forward-Looking Statements**

The following discussion should be read in conjunction with our accompanying Consolidated Financial Statements and Notes thereto included within this Annual Report on Form 10-K. In addition to historical information, this Annual Report on Form 10-K and the following discussion contain statements that are not historical facts and are considered forward-looking within the meaning of Section 27A of the Securities Act and Section 21E of the Exchange Act. These forward-looking statements contain projections of our future results of operations or of our financial position or state other forward-looking information. In some cases you can identify these statements by forward-looking words such as anticipate, believe, could, estimate, expect, intend, may, should, will and would or similar words. We believe that it is important to communicate our future expectations to our investors. However, there may be events in the future that we are not able to accurately predict or control and that may cause our actual results to differ materially from the expectations we describe in our forward-looking statements. Investors are cautioned not to rely on forward-looking statements because they involve risks and uncertainties, and actual results may differ materially from those discussed as a result of various factors, including, but not limited to: the risk that the anticipated synergies of the Cellex Power Products, Inc. and General Hydrogen Corp. (now amalgamated as Plug Power Canada Inc.) acquisitions are not realized; the risk that our investments in auction rate securities may cause losses and affect the liquidity of these investments; the risk that our recent management turnover may affect the overall performance of the management team; the risk that unit orders will not ship, be installed and/or convert to revenue, in whole or in part; our ability to develop commercially viable on-site energy products; the cost and timing of developing our on-site energy products; market acceptance of our on-site energy products; our ability to manufacture on-site energy products on a large-scale commercial basis; competitive factors, such as price competition and competition from other traditional and alternative energy companies; the cost and availability of components and parts for our on-site energy products; the ability to raise and provide the necessary capital to develop, manufacture and market our on-site energy products; our ability to establish relationships with third parties with respect to product development, manufacturing, distribution and servicing and the supply of key product components; our ability to protect our Intellectual Property; our ability to lower the cost of our on-site energy products and demonstrate their reliability; the cost of complying with current and future governmental regulations; the impact of deregulation and restructuring of the electric utility industry on demand for our on-site energy products; fluctuations in the trading price and volume of our common stock; and other risks and uncertainties discussed under Item IA Risk Factors. Readers should not place undue reliance on our forward-looking statements. These forward-looking statements speak only as of the date on which the statements were made and are not guarantees of future performance. Except as may be required by applicable law, we do not undertake or intend to update any forward-looking statements after the date of this Annual Report on Form 10-K.

Item 1. Business
Company Background

Plug Power Inc., together with its subsidiaries, is a development stage enterprise involved in the design, development and manufacture of fuel cell systems for stationary and motive markets worldwide. The Company is a development stage enterprise because substantially all of the Company's resources and efforts are aimed at the discovery of new knowledge that could lead to significant improvement in fuel cell reliability and durability and the establishment of a market for the Company's products. The Company continues to experience significant net outflows of cash from operations and devotes significant efforts towards financial planning in order to forecast future cash spending and the ability to continue product research and development activities. Fuel cell technology within the Company's targeted markets, telecommunications, broadband, utility, and industrial un-interruptible power supply, as well as the mobile industrial equipment market recently entered into as a result of recent acquisitions, is still early in the technology adoption life cycle.

The Company is focused on proton exchange membrane, or PEM, fuel cell and fuel processing technologies, from which multiple products are under development. A fuel cell is an electrochemical device that combines hydrogen and oxygen to produce electricity and heat without combustion. Hydrogen is derived from

Table of Contents

hydrocarbon fuels such as natural gas, propane, methanol, ethanol or gasoline and can also be obtained from the electrolysis of water or purchased directly from industrial gas providers.

The Company sells its products worldwide through its direct sales force and value-added resellers. The Company sells to business and government customers.

The Company was organized in the State of Delaware on June 27, 1997 and was originally formed as a joint venture between Edison Development Corporation and Mechanical Technology Incorporated. In 2007 the Company merged with and acquired all the assets, liabilities and equity of Cellex Power Products, Inc. (Cellex) and General Hydrogen Corporation (General Hydrogen). With the integration of Cellex and General Hydrogen complete, we now offer GenDrive, a line of fuel cell power units for the material handling industry.

Unless the context indicates otherwise, the terms Company, Plug Power, we, our or us as used herein refers to Plug Power Inc. (the registrant) and its subsidiaries.

Business Strategy

We are committed to developing effective, economic and environmental fuel cell products and services for businesses, government agencies, and ultimately consumers. Building on our substantial fuel cell application and product integration experience, we are initially focused on building deep, lasting relationships with customers who value reliability, productivity, energy security, and a sustainable future.

Our business strategy leverages our unique fuel cell application and integration knowledge to identify early adopter markets for which we can design and develop innovative systems and customer solutions which provide superior value, ease-of-use, and environmental design.

We believe continual investment in research and development is critical to the development and enhancement of innovative products, technologies and services. In addition to evolving our direct hydrogen fueled systems, we continue to capitalize on our investment in power electronics, controls, software and reforming technology.

Our strategy also includes expanding our distribution network to effectively reach more of our targeted customers and provide them with high-quality products, service and post-sales support experience.

We are striving to meet longer-term objectives of delivering economic, social, and environmental benefits in terms of reliable, clean, cost-effective fuel cell solutions and, ultimately, sustainability.

Business Organization

We manage our business as a single development stage enterprise, emphasizing shared learning across end-user applications and common supplier/vendor relationships.

Products

We are developing a range of fuel cell products and services including hydrogen fuel cell low-temperature Proton Exchange Membrane (PEM) systems for back-up, motive and continuous power and a high-temperature fuel cell system for residential and light commercial co-generation.

In addition, we are developing software and hardware accessories, which extend system functionality and permit customers and third parties to develop custom interface solutions. Our primary lines of development are discussed below:

GenCore® Hydrogen fueled PEM fuel cell system to provide back-up power to businesses and government in critical infrastructure. We are focusing our primary efforts on the telecommunications sector where we

Table of Contents

believe fuel cell systems offer the benefit of reliability, predictability and environmental performance. We launched our first commercial product, the GenCore® 5T48, a -48volt 5 kilowatt system in November 2003. Plug Power offers the 5kW product in a variety of voltage configurations suited to un-interruptible power and utility back-up power systems.

Additionally, we continue to advance the development of our other technology platforms.

GenDrive Hydrogen fueled PEM fuel cell system to provide motive power to light industrial vehicles. We are focusing our primary efforts on material handling (forklift) and automated guided vehicles (AGV) at multi-shift industrial and high throughput distribution sites where we believe our products and services provide a unique combination of productivity, flexibility and environmental benefits. We have completed several pre-commercial beta trials, most notably with Wal-Mart, and expect to continue expanded pre-commercial trials in 2008.

GenSys® Natural gas or liquid petroleum gas (LPG) fueled continuous power system. We continue to develop a low-temperature (70°C) PEM fuel cell system that would support a number of premium off-grid electric generation products, including systems fueled by LPG for wireless telecommunications.

In connection with the development of our GenSys® product, we are developing a high-temperature (180°C) polybenzimidazole (PBI) combined heat and power fuel cell system for light commercial and residential applications producing high quality heat and supplemental electricity.

In addition, we have has been developing technology in support of the automotive fuel cell market under a series of agreements with Honda R&D Co Ltd. of Japan (Honda), a subsidiary of Honda Motor Co., Ltd. Under these agreements we have developed, on a joint and exclusive basis, and tested four phases of prototype fuel cell systems that provide electricity and heat to a home, while also providing hydrogen fuel for a fuel cell vehicle. Since 2003 we have successfully demonstrated four successive prototype generations of this system at Honda R&D Americas facility in Torrance, California and at Plug Power s facility in Latham, NY.

Product Support & Services

To promote fuel cell adoption and maintain post-sale customer satisfaction we offer a range of service and support options for our customers. These options include installation, commissioning, fueling and assistance that is built into software, printed and electronic product manuals, online support, and a 24 hour hotline as well as on-site technical assistance.

Markets/Geography

Our commercial sales (GenCore®) are primarily in the telecommunications market, which represented 93% of our 2007 installation activity.

Year	Units Shipped (GenCore®)	Units Installed (GenCore®)	Telecom Installations (GenCore®)
2005	117	75	21
2006	136	85	50
2007	180	208	193

In 2007, the Americas represented our largest geographic marketplace with 73% of installations, while Europe/Middle-East/Africa and Asia Pacific accounted for 22% and 5% of installations, respectively.

We have accepted orders from our distributors, which include firm orders, stocking orders and orders that require certain conditions or contingencies to be satisfied prior to shipment, some of which are outside of our control. Historically, shipments made against these orders can occur between thirty (30) days and twenty-four (24) months from the date of acceptance of the order.

Table of Contents

We received 106 orders for our GenCore® product during the year ended December 31, 2007. Backlog on December 31, 2007 was 184 units representing \$2.3 million. Of the unit orders in backlog on December 31, 2007, orders for 154 units were older than 12 months.

We received 94 orders for our GenDrive product during the year ended December 31, 2007. Backlog on December 31, 2007 was 119 units representing \$1.9 million. Of the unit orders in backlog on December 31, 2007, orders for 32 units were older than 12 months.

Final assembly of products that we sell is performed primarily at our manufacturing facility in Latham, New York. Currently, the supply and manufacture of several critical components used in our products are performed by sole-sourced third-party vendors in the U.S. and Canada.

Distribution, Marketing and Strategic Relationships

We have developed an extended enterprise by forming strategic relationships with well-established companies in key areas including distribution, marketing, supply, technology development and product development. We sell our products worldwide through our direct sales force and value-added resellers. We have built a network of leading distributors who have established relationships and sub-distributor networks that can distribute and service our products in specific geographic or market segments. Our distributors have no special right of return, price protection allowances or other sales incentives. We do offer a discount from our manufacturers suggested retail price to resellers to allow for the mark-up of the reseller.

Competition

We are confronted by aggressive competition in all areas of our business. The markets for back-up and motive power are highly competitive. These markets are characterized by the presence of well-established commodity battery and combustion generator products, in addition to several competing fuel cell companies.

Over the past several years, price competition in these markets has been particularly intense. Our competitors who sell batteries have faced substantial increases in commodity prices (lead, steel and copper) and maintained historical price levels, lowering their product margins to gain or maintain market share.

The principal competitive factors in the markets in which we operate include price, product features, relative price/performance, product quality and reliability, design innovation, marketing and distribution capability, service and support, and corporate reputation.

In the back-up power market, we believe our GenCore® systems have an advantage over batteries and combustion engines for customers seeking an 8-24 hour back-up requirement, by offering a more reliable and economic solution. In target segments of the motive power market, we believe our GenDrive systems have a unique advantage over lead-acid batteries by offering increased productivity with lower operational costs. However, we expect competition in this space to intensify as competitors attempt to imitate our approach with their own offerings. Some of these current and potential competitors have substantial resources and may be able to provide such products and services at little or no profit or even at a loss to compete with our offerings.

Intellectual Property

We believe that neither we nor our competitors can achieve a significant proprietary position on the basic technologies currently used in PEM fuel cell systems. However, we believe the design and integration of our system and system components, as well as some of the low-cost manufacturing processes that we have developed, is intellectual property that can be protected.

Table of Contents

During 2007 we increased our technology portfolio by adding 25 new U.S. patents. At December 31, 2007 we have had 173 U.S. patents and 10 foreign patents issue, and we currently have over 175 patents pending worldwide. Additionally, patents were filed by Honda relating to development work on GenSys® to which we have certain rights. The technology portfolio covers among other things: fuel cell components that reduce manufacturing part count; fuel cell system designs that lend themselves to mass manufacturing; improvements to fuel cell system efficiency, reliability and system life; and control strategies, such as added safety protections and operation under extreme conditions. In general, our employees are party to agreements providing that all inventions (whether patented or not) made or conceived while an employee of Plug Power, which are related to or result from work or research that Plug Power performs, will remain the sole and exclusive property of Plug Power.

Government Regulation

We do not believe that we will be subject to existing federal and state regulatory commissions governing traditional electric utilities and other regulated entities. Our GenCore® product and its installation is, however, subject to oversight and regulation at the state and local level in accordance with state and local statutes and ordinances relating to, among others, building codes, fire codes, public safety, electrical and gas pipeline connections and hydrogen siting. The level of regulation may depend, in part, upon where a system is located. For example, the 2008 National Electrical Code, or NEC, is a model code written by the National Fire Protection Association, or (NFPA,) that governs the electrical wiring of most homes, businesses and other buildings. The NEC has been adopted by local jurisdictions throughout the United States and is enforced by local officials, such as building and electrical inspectors. Article 692 of the NEC governs the installation of fuel cell systems. Accordingly, all our systems installed in a jurisdiction that has adopted the NEC are installed in accordance with Article 692.

In addition, product safety standards have been established by the American National Standards Institute (ANSI) covering the overall fuel cell system. Our GenCore® product has been certified by independent third-parties to be in compliance with such standards. Other than these requirements, at this time we do not know what additional requirements, if any, each jurisdiction will impose on our products or their installation. We also do not know the extent to which any new regulations may impact our ability to distribute, install and service our products. As we continue distributing our systems to our target markets, the federal, state or local government entities or competitors may seek to impose regulations.

Raw Materials

Although most components essential to our business are generally available from multiple sources, we currently obtain certain key components including, but not limited to, fuel cell stack materials and energy storage devices, from single or limited sources.

We believe there are several component suppliers and manufacturing vendors whose loss to the Company could have a material adverse effect upon our business and financial condition. At this time, such vendors include, but are not limited to, Ballard Power Systems, BASF Fuel Cells, Cobasys LLC, 3M Co., and Dana Corporation. We attempt to mitigate these potential risks by working closely with these and other key suppliers on product introduction plans, strategic inventories, coordinated product introductions, and internal and external manufacturing schedules and levels.

Research and Development

Because the fuel cell industry is characterized by its early state of adoption, our ability to compete successfully is heavily dependent upon our ability to ensure a continual and timely flow of competitive products, services, and technologies to the marketplace. We continue to develop new products and technologies and to enhance existing products in the areas of cost, size, weight, and in supporting service solutions. We may expand

Table of Contents

the range of our product offerings and intellectual property through licensing and/or acquisition of third-party business and technology. Our research and development expense totaled \$39.2 million, \$41.6 million, and \$35.6 million in 2007, 2006, and 2005, respectively. We also had cost of research and development contract revenue of \$19.0 million, \$7.6 million, and \$12.1 million in 2007, 2006 and 2005, respectively. These expenses represent the cost of research and development programs that are partially funded under cost reimbursement research and development arrangements with third parties.

Employees

As of December 31, 2007, we had a total staff of 390, including 384 full-time and 6 part-time employees, of which approximately 264 were engineers, scientists and other degreed professionals.

Available information

We maintain a website with an Internet address of www.plugpower.com. The information contained on our website is not included as a part of, or incorporated by reference into, this Annual Report on Form 10-K. Other than an investor's own internet access charges, we make available free of charge, through our website, our Annual Report on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and amendments to these reports, as soon as reasonably practicable after we have electronically filed such material with, or furnished such material to, the Securities and Exchange Commission.

Item 1A. Risk Factors

The following factors should be considered carefully in addition to the other information in this Form 10-K. Except as mentioned under "Quantitative and Qualitative Disclosure About Market Risk" and except for the historical information contained herein, the discussion contained in this Form 10-K contains forward-looking statement, within the meaning of Section 27A of the Securities Act and Section 21E of the Exchange Act, that involve risks and uncertainties. Our actual results could differ materially from those discussed in this Form 10-K. Important factors that could cause or contribute to such differences include those discussed below, as well as those discussed elsewhere herein.

Delays in our product development could have a material impact on the commercialization of our products.

If we experience delays in meeting our development goals, our products exhibit technical defects, or if we are unable to meet cost or performance goals, including power output, useful life and reliability, the ultimate commercialization of our products will be delayed. In this event, potential purchasers of our products may choose alternative technologies and any delays could allow potential competitors to gain market advantages. We cannot assure you that we will successfully meet our commercialization schedule in the future.

We may never complete the research and development of certain commercially viable on-site energy and material handling products.

We are a development stage company. Other than our GenCore[®] product, which we believe to be commercially viable at this time, we do not know when or whether we will successfully complete research and development of other commercially viable on-site energy and material handling products. If we are unable to develop additional commercially viable on-site energy and material handling products, we will not be able to generate sufficient revenue to become profitable. The commercialization of our products depends on our ability to reduce the costs of our components and subsystems, and we cannot assure you that we will be able to sufficiently reduce these costs. In addition, the commercialization of our products requires achievement and verification of their overall reliability, efficiency and safety targets and we cannot assure you that we will be able to develop, acquire or license the technology necessary to achieve these targets. Although we have sold a limited number of

Table of Contents

our initial products, including our GenCore[®] product, we must complete substantial additional research and development before we will be able to manufacture commercially viable products in commercial quantities. In addition, while we are conducting tests to predict the overall life of our products, we may not have run our products over their projected useful life prior to large-scale commercialization. As a result, we cannot be sure that our products will last as long as predicted, resulting in possible warranty claims and commercial failures.

We have incurred losses and anticipate continued losses for at least the next several years.

As of December 31, 2007 we had an accumulated deficit of \$518.0 million. We have not achieved profitability in any quarter since our formation and expect to continue to incur net losses until we can produce sufficient revenue to cover our costs, which is not expected to occur for at least the next several years. We anticipate that we will continue to incur losses until we can produce and sell our products on a large-scale and cost-effective basis. However, we cannot predict when we will operate profitably, if ever. Even if we do achieve profitability, we may be unable to sustain or increase our profitability in the future.

We have been in business for eleven years and we are still a development stage company.

We were formed in June 1997 to further the research and development of stationary fuel cell systems. While we delivered our initial product in the third quarter of 2001 and our initial GenCore[®] product in the fourth quarter of 2003, we do not expect to be profitable for at least the next several years. Before investing in our common stock, you should consider the challenges, expenses and difficulties that we will face as a development stage company seeking to develop and manufacture new products.

A viable market for our products may never develop or may take longer to develop than we anticipate.

Our on-site energy and material handling products represent emerging markets, and we do not know the extent to which our targeted distributors and resellers will want to purchase them and whether end-users will want to use them. If a viable market fails to develop or develops more slowly than we anticipate, we may be unable to recover the losses we will have incurred to develop our products and may be unable to achieve profitability. The development of a viable market for our products may be impacted by many factors which are out of our control, including:

the cost competitiveness of our products;

the future costs of natural gas, propane, hydrogen and other fuels expected to be used by our products;

consumer reluctance to try a new product;

consumer perceptions of our products' safety;

regulatory requirements;

barriers to entry created by existing energy providers; and

the emergence of newer, more competitive technologies and products.

We have no experience manufacturing our products on a large-scale commercial basis and may be unable to do so.

To date, we have focused primarily on research, development and low volume manufacturing and have no experience manufacturing our products on a large-scale commercial basis. In 2000, we completed construction of our 50,000 square foot manufacturing facility and have continued to develop our manufacturing capabilities and processes. We do not know whether or when we will be able to develop efficient, low-cost manufacturing capabilities and processes that will enable us to manufacture our products in commercial quantities while meeting the

Edgar Filing: PLUG POWER INC - Form 10-K

quality, price, engineering, design, and production standards required to successfully market our products. Our failure to develop such manufacturing processes and capabilities could have a material adverse

Table of Contents

effect on our business, financial condition and results of operations. Even if we are successful in developing our manufacturing capabilities and processes, we do not know whether we will do so in time to meet our product commercialization schedule or to satisfy the requirements of our distributors or customers.

We have not developed and produced the products that we have agreed to sell to some of our distributors.

We have not developed or produced certain products that are required by some of our distribution agreements, including those with IST Holdings Ltd. There can be no assurance that we will complete development of products meeting specifications required by our distributor agreements and deliver them on schedule. Pursuant to our distribution agreements, the distributors have the right to provide notice to us if, in their good faith judgment, we have materially deviated from the distribution agreement. Should a distributor provide such notice, and we cannot mutually agree to a modification to the distributor agreement, then the distributor has the right to terminate the distribution agreement for cause.

Our orders may not ship or convert to revenue, in whole or in part.

We have accepted orders from our distributors which include firm orders, stocking orders and orders that require certain conditions or contingencies to be satisfied prior to shipment, some of which are outside of our control. Historically, shipments made against these orders have occurred between thirty (30) days and twenty- four (24) months from the date of acceptance of the order. Orders received during the year ended December 31, 2007 totaled 210 including 94 units received by the acquired companies. Backlog on December 31, 2007 was 305 units including 119 for the acquired companies. Of the unit orders in backlog on December 31, 2007, orders for 186 units were older than 12 months. The time periods from receipt of an order to shipment date and installation vary widely and are determined by a number of factors, including the terms of the customer contract and the customer's deployment plan. Due to certain redesign elements to be satisfied prior to shipment of units under certain of our distribution agreements, some of which are outside of the Company's control, some or all of our orders may not ship or convert to revenue.

We may need to secure additional funding to complete our product development and commercialization plans and we may be unable to raise additional capital.

Our cash requirements depend on numerous factors, including completion of our product development activities, ability to commercialize our products and market acceptance of our products. We expect to devote substantial capital resources to continue development programs, establish a manufacturing infrastructure and develop manufacturing processes. Additionally, we expect to devote substantial capital resources to expand our marketing organization and establish a sales organization. We may need to raise additional funds to achieve commercialization of our products. However, we do not know whether we will be able to secure additional funding, or funding on acceptable terms, to pursue our commercialization plans. If additional funds are raised through the issuance of equity securities, the percentage ownership of our then current stockholders will be reduced. If adequate funds are not available to satisfy either short-term or long-term capital requirements, we may be required to limit operations in a manner inconsistent with our development and commercialization plans, which could affect operations in future periods.

We may be unable to establish relationships, or we may lose existing relationships, with third parties for certain aspects of product development, manufacturing, distribution and servicing and the supply of key components for our products.

We will need to enter into additional strategic relationships in order to complete our current product development and commercialization plans. We will also require partners to assist in the distribution, servicing and supply of components for our anticipated back-up power and on-site hydrogen generation products, both of which are in development. If we are unable to identify or enter into satisfactory agreements with potential partners, including those relating to the distribution, service and support of our anticipated back-up power and

Table of Contents

on-site hydrogen generation products, we may not be able to complete our product development and commercialization plans on schedule or at all. We may also need to scale back these plans in the absence of needed partners, which would adversely affect our future prospects for development and commercialization of future products. In addition, any arrangement with a strategic partner may require us to issue a significant amount of equity securities to the partner, provide the partner with representation on our board of directors and/or commit significant financial resources to fund our product development efforts in exchange for their assistance or the contribution to us of intellectual property. Any such issuance of equity securities would reduce the percentage ownership of our then current stockholders. While we have entered into relationships with suppliers of some key components for our products, we do not know when or whether we will secure supply relationships for all required components and subsystems for our products, or whether such relationships will be on terms that will allow us to achieve our objectives. Our business, prospects, results of operations and financial condition could be harmed if we fail to secure relationships with entities which can develop or supply the required components for our products and provide the required distribution and servicing support. Additionally, the agreements governing our current relationships allow for termination by our partners under certain circumstances, some of which are beyond our control. If any of our current strategic partners were to terminate any of its agreements with us, there could be a material adverse impact on the development and commercialization of our products and the operation of our business, financial condition, results of operations and prospects.

We will rely on our partners to develop and provide components for our products.

A supplier's failure to develop and supply components in a timely manner or at all, or to develop or supply components that meet our quality, quantity or cost requirements, or our inability to obtain substitute sources of these components on a timely basis or on terms acceptable to us, could harm our ability to manufacture our products. In addition, to the extent that our supply partners use technology or manufacturing processes that are proprietary, we may be unable to obtain comparable components from alternative sources.

We face intense competition and may be unable to compete successfully.

The markets for on-site energy products are intensely competitive. There are a number of companies located in the United States, Canada and abroad that are developing PEM and other fuel cell technologies and energy products that compete with our products. Some of our competitors in the fuel cell sector are much larger than we are and may have the manufacturing, marketing and sales capabilities to complete research, development and commercialization of commercially viable fuel cell products more quickly and effectively than we can.

In addition, there are many companies engaged in all areas of traditional and alternative energy generation in the United States, Canada and abroad, including, among others, major electric, oil, chemical, natural gas, battery, generator and specialized electronics firms, as well as universities, research institutions and foreign government-sponsored companies. These firms are engaged in forms of power generation such as solar and wind power, reciprocating engines and micro turbines, as well as traditional grid-supplied electric power. Many of these entities have substantially greater financial, research and development, manufacturing and marketing resources than we do.

We must lower the cost of our products and demonstrate their reliability.

Our initial fuel cell systems currently cost significantly more than many established competing technologies. If we are unable to develop products that are competitive with competing technologies in terms of price, reliability and longevity, consumers will be unlikely to buy our products. The price of our products depends largely on material and manufacturing costs. We cannot guarantee that we will be able to lower these costs to the level where we will be able to produce a competitive product or that any product produced using lower cost materials and manufacturing processes will not suffer from a reduction in performance, reliability and longevity.

Table of Contents

Failure of our field tests could negatively impact demand for our products.

We are currently field-testing a number of our products and we plan to conduct additional field tests in the future. We may encounter problems and delays during these field tests for a number of reasons, including the failure of our technology or the technology of third parties, as well as our failure to maintain and service our products properly. Many of these potential problems and delays are beyond our control. Any problem or perceived problem with our field tests could materially harm our reputation and impair market acceptance of, and demand for, our products.

Further regulatory changes and electric utility industry restructuring may affect demand for our products.

The market for electric power generation products is heavily influenced by federal and state governmental regulations and policies concerning the electric utility and telecommunications industries. A change in the current regulatory policies could deter further investment in the research and development of alternative energy sources, including fuel cells, and could result in a significant reduction in the demand for our products. We cannot predict how deregulation or restructuring of the industry will affect the market for our products.

Our business may become subject to future government regulation, which may impact our ability to market our products.

Our products will be subject to federal, local, and non-U.S. laws and regulations, including, for example, state and local ordinances relating to building codes, public safety, electrical and gas pipeline connections, hydrogen transportation and siting and related matters. Further, as products are introduced into the market commercially, governments may impose new regulations. We do not know the extent to which any such regulations may impact our ability to distribute, install and service our products. Any regulation of our products, whether at the federal, state, local or foreign level, including any regulations relating to installation and servicing of our products, may increase our costs and the price of our products.

Utility companies could place barriers on our entry into the marketplace where customers depend on traditional grid supplied energy.

Utility companies often charge fees to industrial companies for disconnecting from the grid, for using less electricity or for having the capacity to use power from the grid for back-up purposes, and may charge similar fees to residential customers in the future. The imposition of such fees could increase the cost to grid-connected customers of using our products and could make our products less desirable, thereby harming our revenue and profitability.

Alternatives to our technology or improvements to traditional energy technologies could make our products less attractive or render them obsolete.

Our products are among a number of alternative energy products being developed. A significant amount of public and private funding is currently directed toward development of micro turbines, solar power, wind power and other types of fuel cell technologies. Improvements are also being made to the existing electric transmission system. Technological advances in alternative energy products, improvements in the electric power grid or other fuel cell technologies may make our products less attractive or render them obsolete.

The hydrocarbon fuels and other raw materials on which our products rely may not be readily available or available on a cost-effective basis.

Our products depend largely on the availability of natural gas, liquid propane and hydrogen gas. If these fuels are not readily available, or if their prices are such that energy produced by our products costs more than energy provided by other sources, our products could be less attractive to potential users.

Table of Contents

In addition, platinum is a key material in our PEM fuel cells. Platinum is a scarce natural resource and we are dependent upon a sufficient supply of this commodity. Any shortages could adversely affect our ability to produce commercially viable fuel cell systems and significantly raise our cost of producing our fuel cell systems.

Our products use flammable fuels that are inherently dangerous substances.

Our fuel cell systems use natural gas, liquid propane and hydrogen gas in catalytic reactions, which produce less heat than a typical gas furnace. While our products do not use this fuel in a combustion process, natural gas, liquid propane and hydrogen gas are flammable fuels that could leak in a home or office and combust if ignited by another source. Further, while we are not aware of any accidents involving our products, any such accidents involving our products or other products using similar flammable fuels could materially suppress demand for, or heighten regulatory scrutiny of, our products.

Product liability or defects could negatively impact our results of operations.

Any liability for damages resulting from malfunctions or design defects could be substantial and could materially adversely affect our business, financial condition, results of operations and prospects. In addition, a well-publicized actual or perceived problem could adversely affect the market's perception of our products resulting in a decline in demand for our products and could divert the attention of our management, which may materially and adversely affect our business, financial condition, results of operations and prospects.

Future acquisitions may be difficult to integrate, add additional burden to our management and reduce the percentage ownership of our stockholders.

As part of our business strategy we may engage in acquisitions that we believe will provide us with complementary technologies, products, channels, revenue streams, expertise and/or other valuable assets. However, we may not be able to identify suitable acquisition candidates. If we do identify suitable candidates, we may not be able to acquire them on commercially acceptable terms or at all. If we acquire another company, we may not be able to successfully integrate the acquired business into our existing business in a timely and non-disruptive manner. We may have to devote a significant amount of time and management and financial resources to do so. Even with this investment of management and financial resources, an acquisition may not produce the desired revenues, earnings or business synergies. In addition, an acquisition involving our stock may reduce the percentage ownership of our then current stockholders. If we fail to integrate the acquired business effectively or if key employees of that business leave, the anticipated benefits of the acquisition would be jeopardized. The time, capital, management and other resources spent on an acquisition that fails to meet our expectations could cause our business and financial condition to be materially and adversely affected. In addition, from an accounting perspective, acquisitions can lead to non-recurring charges and amortization or impairment of significant amounts of intangible assets that could adversely affect our results of operations.

We may not be able to protect important intellectual property and we could incur substantial costs defending against claims that our products infringe on the proprietary rights of others.

PEM fuel cell technology was first developed in the 1950s, and fuel processing technology has been practiced on a large scale in the petrochemical industry for decades. Accordingly, we do not believe that we can establish a significant proprietary position in the fundamental component technologies in these areas. However, our ability to compete effectively will depend, in part, on our ability to protect our proprietary system-level technologies, systems designs and manufacturing processes. We rely on patents, trademarks, and other policies and procedures related to confidentiality to protect our intellectual property. However, some of our intellectual property is not covered by any patent or patent application. Moreover, we do not know whether any of our pending patent applications will issue or, in the case of patents issued or to be issued, that the claims allowed are or will be sufficiently broad to protect our technology or processes. Even if all of our patent applications are issued and are sufficiently broad, our patents may be challenged or invalidated. We could incur substantial costs

Table of Contents

in prosecuting or defending patent infringement suits or otherwise protecting our intellectual property rights. While we have attempted to safeguard and maintain our proprietary rights, we do not know whether we have been or will be completely successful in doing so. Moreover, patent applications filed in foreign countries may be subject to laws, rules and procedures that are substantially different from those of the United States, and any resulting foreign patents may be difficult and expensive to enforce. In addition, we do not know whether the U.S. Patent & Trademark Office will grant federal registrations based on our pending trademark applications. Even if federal registrations are granted to us, our trademark rights may be challenged. It is also possible that our competitors or others will adopt trademarks similar to ours, thus impeding our ability to build brand identity and possibly leading to customer confusion. We could incur substantial costs in prosecuting or defending trademark infringement suits.

Further, our competitors may independently develop or patent technologies or processes that are substantially equivalent or superior to ours. If we are found to be infringing third party patents, we could be required to pay substantial royalties and/or damages, and we do not know whether we will be able to obtain licenses to use such patents on acceptable terms, if at all. Failure to obtain needed licenses could delay or prevent the development, manufacture or sale of our products, and could necessitate the expenditure of significant resources to develop or acquire non-infringing intellectual property.

Asserting, defending and maintaining our intellectual property rights could be difficult and costly and failure to do so may diminish our ability to compete effectively and may harm our operating results. We may need to pursue lawsuits or legal action in the future to enforce our intellectual property rights, to protect our trade secrets and domain names, and to determine the validity and scope of the proprietary rights of others. If third parties prepare and file applications for trademarks used or registered by us, we may oppose those applications and be required to participate in proceedings to determine the priority of rights to the trademark. Similarly, competitors may have filed applications for patents, may have received patents and may obtain additional patents and proprietary rights relating to products or technology that block or compete with ours. We may have to participate in interference proceedings to determine the priority of invention and the right to a patent for the technology. Litigation and interference proceedings, even if they are successful, are expensive to pursue and time consuming, and we could use a substantial amount of our financial resources in either case.

We rely, in part, on contractual provisions to protect our trade secrets and proprietary knowledge.

Confidentiality agreements to which we are party may be breached, and we may not have adequate remedies for any breach. Our trade secrets may also be known without breach of such agreements or may be independently developed by competitors. Our inability to maintain the proprietary nature of our technology and processes could allow our competitors to limit or eliminate any competitive advantages we may have.

We may have difficulty managing change in our operations.

We continue to undergo rapid change in the scope and breadth of our operations as we advance the development of our products. Such rapid change is likely to place a significant strain on our senior management team and other resources. We will be required to make significant investments in our engineering, logistics, financial and management information systems and to motivate and effectively manage our employees. Our business, prospects, results of operations and financial condition could be harmed if we encounter difficulties in effectively managing the budgeting, forecasting and other process control issues presented by such a rapid change.

We face risks associated with our plans to market, distribute and service our products internationally.

We intend to market, distribute and service our products internationally. We have limited experience developing and manufacturing our products to comply with the commercial and legal requirements of international markets. Our success in international markets will depend, in part, on our ability and that of our

Table of Contents

partners to secure relationships with foreign sub-distributors, and our ability to manufacture products that meet foreign regulatory and commercial requirements. Additionally, our planned international operations are subject to other inherent risks, including potential difficulties in enforcing contractual obligations and intellectual property rights in foreign countries and fluctuations in currency exchange rates. Also, to the extent our operations and assets are located in foreign countries they are potentially subject to nationalization actions over which we will have no control.

Our international sales and operations may be adversely affected by changes in local government laws, regulations and policies.

Our international sales and operations are subject to risks associated with changes in local government laws, regulations and policies, including those related to tariffs and trade barriers, investments, taxation, exchange controls, employment regulations, and repatriation of earnings. Our international sales and operations are also sensitive to changes in foreign national priorities, including government budgets, as well as to political and economic instability. International transactions may involve increased financial and legal risks due to differing legal systems and customs in foreign countries. For example, as a condition of sale or to the awarding of a contract, some international customers require us to agree to offset arrangements, which may include in-country purchases, manufacturing and financial support arrangements. The contract may provide for penalties in the event we fail to perform in accordance with the offset requirements. In addition, as part of our globalization strategy, we have invested in certain countries which may carry high levels of currency, political and economic risk. While these factors or the impact of these factors are difficult to predict, any one or more of them could adversely affect our business, financial condition or operating results.

Our government contracts could restrict our ability to effectively commercialize our technology.

Some of our technology has been developed under government funding by the United States and Canada, and by other countries. The United States and Canadian governments have a non-exclusive, royalty-free, irrevocable world-wide license to practice or have practiced any of our technology developed under contracts funded by the respective government. In some cases, government agencies in the United States or Canada can require us to obtain or produce components for our systems from sources located in the United States or Canada, respectively, rather than foreign countries. Our contracts with government agencies are also subject to the risk of termination at the convenience of the contracting agency, potential disclosure of our confidential information to third parties and the exercise of march-in rights by the government. March-in rights refer to the right of the United States or Canadian governments or government agency to license to others any technology developed under contracts funded by the government if the contractor fails to continue to develop the technology. The implementation of restrictions on our sourcing of components or the exercise of march-in rights could harm our business, prospects, results of operations and financial condition. In addition, under the Freedom of Information Act, any documents that we have submitted to the government or to a contractor under a government funding arrangement are subject to public disclosure that could compromise our intellectual property rights unless such documents are exempted as trade secrets or as confidential information and treated accordingly by such government agencies.

Our future plans could be harmed if we are unable to attract or retain key personnel.

We have attracted a highly skilled management team and specialized workforce, including scientists, engineers, researchers, manufacturing, marketing and sales professionals. Our future success will depend, in part, on our ability to attract and retain qualified management and technical personnel. We do not know whether we will be successful in hiring or retaining qualified personnel. Our inability to hire qualified personnel on a timely basis, or the departure of key employees, could materially and adversely affect our development and commercialization plans and, therefore, our business, prospects, results of operations and financial condition.

Table of Contents

Smart Hydrogen has substantial control over us and could limit your ability to influence the outcome of key transactions, including a change of control.

Smart Hydrogen and its affiliates beneficially own approximately 35.1% of the outstanding shares of our common stock on an if-converted basis. As a result, these stockholders can significantly influence or control certain matters requiring approval by our stockholders, including the approval of mergers or other extraordinary transactions. The interests of these stockholders may differ from yours and these stockholders may vote in a way with which you disagree and which may be adverse to your interests. This concentration of ownership may have the effect of delaying, preventing or deterring a change of control of our Company, could deprive our stockholders of an opportunity to receive a premium for their common stock as part of a sale of our Company and might ultimately affect the market price of our common stock.

If a substantial number of shares of the Company's common stock become available for sale and are sold in a short period of time, the market price of our common stock could decline.

Smart Hydrogen holds 395,000 shares of Class B capital Stock, a class of preferred stock of the Company, which are convertible into 39,500,000 shares of common stock of the Company, and approximately 5,100,000 shares of common stock of the Company, which represent in aggregate approximately 35.1% of the Company's outstanding common stock on an if-converted basis. Smart Hydrogen and its affiliates are subject to an Investor Rights Agreement with the Company pursuant to which Smart Hydrogen and its affiliates were prohibited from selling shares of the Company's stock until December 31, 2007, and are still restricted in selling shares of the Company's stock through private sale. If Smart Hydrogen or its affiliates converts its preferred shares into shares of common stock and/or sell substantial amounts of our common stock in the public market, the market price of our common stock could decrease significantly. The perception in the public market that Smart Hydrogen might sell shares of common stock could also depress the trading price of our common stock. A decline in the price of shares of our common stock might impede our ability to raise capital through the issuance of additional shares of our common stock or other equity securities.

Provisions in our charter documents and Delaware law may prevent or delay an acquisition of us, which could decrease the value of our common stock.

Our certificate of incorporation, bylaws and Delaware law contain provisions that could make it harder for a third party to acquire us without the consent of our board of directors. These provisions include those that:

authorize the issuance of up to 5,000,000 shares of preferred stock in one or more series without a stockholder vote;

limit stockholders' ability to call special meetings;

establish advance notice requirements for nominations for election to our board of directors or for proposing matters that can be acted on by stockholders at stockholder meetings; and

provide for staggered terms for our directors.

In addition, in certain circumstances, Delaware law also imposes restrictions on mergers and other business combinations between us and any holder of 15% or more of our outstanding common stock.

Our stock price has been and could remain volatile.

The market price of our common stock has historically experienced and may continue to experience significant volatility. Since our initial public offering in October 1999, the market price of our common stock has fluctuated from a high of \$156.50 per share in the first quarter of 2000 to a low of \$2.42 per share in the third quarter of 2007. Our progress in developing and commercializing our products, our quarterly operating results, announcements of new products by us or our competitors, our perceived prospects, changes in securities analysts' recommendations or earnings estimates, changes in general conditions in the economy or the financial

Table of Contents

markets, adverse events related to our strategic relationships, significant sales of our common stock by existing stockholders including one or more of our strategic partners and other developments affecting us or our competitors could cause the market price of our common stock to fluctuate substantially. In addition, in recent years, the stock market, and in particular the market for technology-related stocks has experienced significant price and volume fluctuations. This volatility has affected the market prices of securities issued by many companies for reasons unrelated to their operating performance and may adversely affect the price of our common stock. In addition, we may be subject to additional securities class action litigation as a result of volatility in the price of our common stock, which could result in substantial costs and diversion of management's attention and resources and could harm our stock price, business, prospects, results of operations and financial condition.

Our failure to comply with NASDAQ's listing standards could result in the delisting of our common stock by NASDAQ from the NASDAQ Global Market and severely limit the ability to sell our common stock.

Our common stock is currently traded on the NASDAQ Global Market. Under NASDAQ's listing maintenance standards, if the closing bid price of our common stock is under \$1.00 per share for 30 consecutive trading days, NASDAQ will notify us that we may be delisted from the NASDAQ Global Market. If the closing bid price of our common stock does not thereafter regain compliance for a minimum of 10 consecutive trading days during the 90 days following notification by NASDAQ, NASDAQ may delist our common stock from trading on the NASDAQ Global Market. There can be no assurance that our common stock will remain eligible for trading on the NASDAQ Global Market. In addition, if our common stock is delisted, our stockholders would not be able to sell our common stock on the NASDAQ Global Market, and their ability to sell any of our common stock would be severely, if not completely, limited.

Our acquisitions of Cellex Power Products, Inc. and General Hydrogen Corporation may not yield the intended benefits.

We must be able to successfully manage our acquisitions of Cellex Power Products, Inc. and General Hydrogen Corporation. Specifically, we must be able to manage the synergies successfully without any significant disruption to our ability to execute our business plan. In addition, our financial results could be adversely impacted if we are not able to deliver the expected cost and growth synergies associated with these acquisitions.

We may be unable to liquidate our investments in auction rate debt securities due to recent disruptions in the financial markets.

A substantial portion of our investment portfolio (\$92.8 million) is invested in auction rate debt securities. The auction rate debt securities are collateralized by student loan debt securities issued by various states, in the United States, or state agencies. The Federal government guarantees the student loans that are collateralizing \$91.0 million of these securities. These auction rate debt securities are structured to be tendered at par, at the option of the investor, at auctions occurring every 27-30 days. The auctions that occurred in January of 2008 were successful. However, the recent disruption in the financial and capital markets has resulted in reduced liquidity of these auction rate debt securities and increased the liquidity risk associated with these securities as the auctions that have occurred beginning in February 2008 have not been successful. Each of the auction rate debt securities include contractual provisions to deal with these events. The Company will continue to receive interest income on these debt securities, however, the interest rates will be at the maximum rate defined for each security. The default interest rates will be received until there is a successful auction or the Company sells these securities in the open market. Scheduled auctions will continue to take place at future pre-established dates. The Company, however, is required to hold these auction rate debt securities until there is a successful auction, until the debt securities mature, which would be an extended period of time (between 15 and 40 years), or until the Company decides to sell these securities on the open market.

Table of Contents

Given the negative impact of the liquidity situation in the financial markets, as well as the failed auctions that have occurred, the fair value of these auction rate debt securities may become lower than their carrying value, and that difference may be significant. A continuation of the recent disruption in the financial and capital markets will continue to result in reduced liquidity to the Company and may result in impairment write-downs on the auction rate debt securities and/or realized losses on the disposition of these securities.

Our recent management turnover may affect the overall performance of the management team.

In 2007, the position of Chief Financial Officer changed three times, the President resigned from the Company, the Chief Technology Officer retired, and the Chief Executive Officer announced that he will retire as of April 7, 2008. Turnover in senior management could result in a lack of the continuity of the management team and therefore limit the effectiveness of the current management team.

Our largest shareholder, Smart Hydrogen, may be undergoing a change in ownership and an internal realignment.

Smart Hydrogen may be undergoing a change in ownership that could result in an internal realignment and affect the senior management of Smart Hydrogen. Such an event may also affect the Class B directors on our Board of Directors, the percentage of shares that Smart Hydrogen maintains, the involvement that Smart Hydrogen takes in our Company, as well as Smart Hydrogen objectives in investing in the fuel cell market space. There is uncertainty surrounding the individual relationships that we may have with persons representing Smart Hydrogen after realignment.

Item 1B. Unresolved Staff Comments

We have received no written comments regarding our periodic or current reports from the staff of the Securities and Exchange Commission that were issued 180 days or more preceding the end of our 2007 fiscal year.

Item 2. Properties

Our principal executive offices are located in Latham, New York. At our 36-acre campus, we own a 56,000 square foot research and development center, a 32,000 square foot office building and a 50,000 square foot manufacturing facility and believe that these facilities are sufficient to accommodate our anticipated production volumes for at least the next two years.

In connection with the acquisitions of Cellex and General Hydrogen, we also lease two facilities in Richmond, British Columbia with combined square footage of approximately 70,200 square feet to accommodate office, manufacturing, and research and development activities.

Item 3. Legal Proceedings

None.

Item 4. Submission of Matters to a Vote of Security Holders

None.

Table of Contents**PART II****Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities**

During the years ended December 31, 2007 and 2006, we issued 279,054 and 199,124 shares of our common stock in connection with matching contributions under our 401(k) Savings & Retirement Plan. The issuance of these shares is exempt from registration under Section 3(a)(2) of the Securities Act of 1933, as amended.

Market Information. Our common stock is traded on the NASDAQ Global Market under the symbol PLUG. As of March 7, 2008, there were approximately 3,018 record holders of our common stock. However, management believes that a significant number of shares are held by brokers under a nominee name and that the number of beneficial shareholders of our common stock exceeds 57,000. The following table sets forth high and low last reported sale prices for our common stock as reported by the NASDAQ Global Market for the periods indicated:

	Sales prices	
	High	Low
2007		
1st Quarter	\$ 3.96	\$ 2.86
2nd Quarter	\$ 3.49	\$ 2.90
3rd Quarter	\$ 3.33	\$ 2.49
4th Quarter	\$ 4.39	\$ 2.97
2006		
1st Quarter	\$ 6.09	\$ 4.59
2nd Quarter	\$ 6.43	\$ 4.64
3rd Quarter	\$ 4.85	\$ 3.64
4th Quarter	\$ 4.49	\$ 3.77

Dividend Policy. We have never declared or paid cash dividends on our common stock and do not anticipate paying cash dividends in the foreseeable future. Any future determination as to the payment of dividends will depend upon capital requirements and limitations imposed by our credit agreements, if any, and such other factors as our board of directors may consider.

Table of Contents

Five-Year Performance Graph. Below is a line graph comparing the percentage change in the cumulative total return on the Company's Common Stock, based on the market price of the Company's Common Stock, with the total return of companies included within the NASDAQ Market Index and the companies included within the Russell 3000 Technology Composite for the period commencing December 31, 2002 and ending December 31, 2007. The calculation of the cumulative total return assumes a \$100 investment in the Company's Common Stock, the NASDAQ Market Index and the Russell 3000 Technology Composite on December 31, 2002 and the reinvestment of all dividends.

Index	2002	2003	2004	2005	2006	2007
PLUG POWER INC.	100.00	161.47	136.08	114.25	86.64	87.97
RUSSELL 3000 TECHNOLOGY	100.00	150.01	151.80	154.82	171.67	198.83
NASDAQ MARKET INDEX	100.00	150.36	163.00	166.58	183.68	201.91

Table of Contents**Item 6. Selected Financial Data**

The following tables set forth selected financial data and other operating information of the Company. The selected statement of operations and balance sheet data for 2007, 2006, 2005, 2004, and 2003 as set forth below are derived from the audited consolidated financial statements of the Company. The information is only a summary and you should read it in conjunction with the Company's audited consolidated financial statements and related notes and other financial information included herein and Management's Discussion and Analysis of Financial Condition and Results of Operations.

	2007	Years Ended December 31,			2003
		2006	2005	2004	
		(in thousands, except per share data)			
Statement Of Operations:					
Product and service revenue	\$ 3,082	\$ 2,657	\$ 4,881	\$ 5,306	\$ 7,517
Research and development contract revenue	13,189	5,179	8,606	10,835	4,985
Total revenue	16,271	7,836	13,487	16,141	12,502
Cost of product and service revenues	9,399	4,833	4,098	5,368	7,150
Cost of research and development contract revenues	19,045	7,637	12,076	13,474	7,010
In-process research and development					3,000
Research and development expense	39,218	41,577	35,632	32,453	37,493

Working capital	163,906	267,002	95,511	64,073	99,286

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following factors should be considered carefully in addition to the other information in this Form 10-K. Except as mentioned under "Quantitative and Qualitative Disclosure About Market Risk" and except for the historical information contained herein, the discussion contained in this Form 10-K contains a forward-looking statement, within the meaning of Section 27A of the Securities Act and Section 21E of the Exchange Act, that involve risks and uncertainties. Our actual results could differ materially from those discussed in this Form 10-K. Important factors that could cause or contribute to such differences include those discussed below, as well as those discussed elsewhere herein.

Table of Contents

Overview

Plug Power Inc., together with its subsidiaries, is a development stage enterprise involved in the design, development and manufacture of fuel cell systems for stationary and industrial-motive (forklift) markets worldwide. We are focused on the application of Proton Exchange Membrane, or PEM, fuel cell and fuel processing technologies from which we are developing multiple products. The Company is a development stage enterprise because substantially all of the Company's resources and efforts are aimed at the discovery of new knowledge that could lead to significant improvement in fuel cell reliability and durability and the establishment of a market for the Company's products. The Company continues to experience significant net outflows of cash from operations and devotes significant efforts towards financial planning in order to forecast future cash spending and the ability to continue product research and development activities. Fuel cell technology within the Company's targeted markets, telecommunications, broadband, utility, and industrial un-interruptible power supply, as well as the mobile industrial equipment market recently entered into as a result of recent acquisitions, is still early in the technology adoption life cycle.

We are currently offering our 5kW hydrogen fueled GenCore® back-up power product for commercial sale to telecommunications, un-interruptible power (UPS) and utility back-up applications, with a focus on wireless telecommunications. We are collaborating with Ballard Power Systems, under government contract, to evaluate alternative stack technology for future products.

In 2007 we acquired Cellex Power Products, Inc. and General Hydrogen Corporation, both leaders in the design and integration of PEM fuel cell systems for forklift and industrial motive power products. We are currently conducting prototype field tests with these hydrogen fueled GenDrive systems that are intended to be a direct replacement for traditional lead-acid battery packs on indoor industrial forklift applications. In the fourth quarter of 2007, we announced our intention of collaborating with Wal-Mart to test and demonstrate a broader deployment of our GenDrive products in a commercial distribution center in 2008.

Additionally, we continue to develop our GenSys® continuous power products. In 2007 we commissioned seventeen (17) 5kW LPG fueled low-temperature off-grid PEM systems in three (3) separate deployments, including a system trial in India with a large wireless carrier.

As an extension of our GenSys® development work, we continue to develop technology in support of the automotive fuel cell market under a series of agreements with Honda R&D Co Ltd. of Japan (Honda), a subsidiary of Honda Motor Co., Ltd. In 2007 we completed Phase 4 of our work with Honda, installing and commissioning the phase 4 system at Honda's facility in Torrance, California and began negotiations on a Phase 5 agreement.

We also form relationships with customers and enter into development and demonstration programs with government agencies and other energy providers. Many of our initial sales of GenCore®, GenDrive and GenSys® are contract-specific arrangements containing multiple obligations that may include a combination of fuel cell systems, continued service, maintenance and other support. The multiple obligations within our contractual arrangements are not accounted for separately based on our limited commercial experience and lack of evidence of fair value. As a result, we defer recognition of product and service revenue and recognize revenue on a straight-line basis over the contractual terms as the continued service, maintenance and other support obligations expire, which are generally for periods of twelve to thirty months. See Critical Accounting Policies and Estimates Revenue Recognition. Our distributors have no special right of return, price protection allowances or other sales incentives. We do offer a discount from our manufacturers suggested retail price to resellers to allow for the mark-up of the reseller.

As we gain commercial experience, including field experience relative to service and warranty of our initial products, the fair values for the multiple elements within our future contracts may become determinable and we may, in future periods, recognize product revenue upon delivery or installation of the product, or we may continue to defer recognition, based on application of appropriate guidance within EITF 00-21, Accounting for

Table of Contents

Revenue Arrangements with Multiple Deliverables, or changes in the manner in which we structure contractual agreements, including our agreements with distribution partners.

Our cash requirements depend on numerous factors, including completion of our product development activities, ability to commercialize our fuel cell systems, market acceptance of our systems and other factors. We expect to pursue the expansion of our operations through internal growth and strategic acquisitions. As of December 31, 2007, we had cash, cash equivalents, and available-for-sale securities of \$165.7 million and working capital of \$163.9 million. See Liquidity and Capital Resources below.

During the year ended December 31, 2007, cash used by operating activities was \$49.3 million, consisting primarily of a net loss of \$60.6 million offset, in part, by non-cash expenses in the amount of \$10.9 million, including \$5.5 million for amortization and depreciation and \$5.4 million for stock based compensation. Cash provided by investing activities for the year ended December 31, 2007 was \$33.1 million, consisting of \$83.7 million of maturities, net of purchases, of available-for-sale securities, offset by \$2.9 million used to purchase property, plant and equipment and \$47.7 million net cash used for acquisitions. Cash provided by financing activities was approximately \$81,000.

We have financed our operations through December 31, 2007 primarily from the sale of equity, which has provided cash in the amount of \$636.1 million since inception. Also since inception, cumulative net cash used in operating activities has been \$397.7 million, and cash used in investing activities has been \$220.5 million, including our purchase of property, plant and equipment of \$36.9 million, our net investments in available-for-sale securities in the amount of \$153.6 million, and cash used for acquisitions of \$19.3 million, net of cash received.

Results of Operations

Product and service revenue. We defer recognition of product and service revenue at the time of delivery and recognize revenue as the continued service, maintenance and other support obligations expire.

Many of our initial sales of product contain multiple obligations that may include a combination of fuel cell systems, continued service, maintenance and other support. While contract terms generally require payment shortly after delivery and installation of the fuel cell system and are not contingent on the achievement of specific milestones or other substantive performance, the multiple obligations within our contractual arrangements are not accounted for separately based on our limited experience and lack of evidence of fair value of the different components. As a result, we defer recognition of product and service revenue and recognize revenue on a straight-line basis as the continued service, maintenance and other support obligations expire, which are currently for periods of twelve to thirty months. In the case of our limited consignment sales, we do not begin recognizing revenue on a deferred basis until the customer has accepted the product, at which time the risks and rewards of ownership have transferred, the price is fixed and we have a reasonable expectation of collecting upon billing. See Critical Accounting Policies and Estimates Revenue Recognition.

Product and service revenue for the year ended December 31, 2007 increased \$425,000 or 16% to \$3.1 million from \$2.7 million for the year ended December 31, 2006. Approximately \$289,000 of the increase is related to the acquisitions of Cellex and General Hydrogen. The remaining amount of the increase is related to increased system shipments in 2007 and the revenue recognized on those shipments, partially offset by decreased revenue recognition for systems shipped prior to 2007. Additionally, we recognized \$365,000 and \$291,000 of non deferred revenue during the years ended December 31, 2007 and 2006, respectively. This revenue represents revenue associated with replacement parts or services not covered by service agreements or other similar types of sales where the Company has no continuing obligation after the parts are shipped or services rendered.

In the product and service revenue category, during 2007 the Company shipped 204 fuel cell systems compared to 109 fuel cell systems during 2006. In 2007, we recognized \$1.1 million of revenue for products

Table of Contents

shipped or services rendered in 2007 compared to \$800,000 of revenue recognized in 2006 for products shipped or services rendered in 2006. Additionally, in 2007 we recognized approximately \$2.0 million of product and services revenue originally deferred at December 31, 2006 whereas in 2006 we also recognized \$1.9 million of revenue originally deferred at December 31, 2005.

Product and service revenue for the year ended December 31, 2006 decreased \$2.2 million or 46% to \$2.7 million from \$4.9 million for the year ended December 31, 2005. In the product and service revenue category, during 2006 the Company shipped 109 fuel cell systems compared to 134 fuel cell systems during 2005. In 2006, we recognized \$800,000 of revenue for products shipped or services rendered in 2006 compared to \$900,000 of revenue recognized in 2005 for products shipped or services rendered in 2005. Additionally, in 2006 we recognized approximately \$1.9 million of product and service revenue originally deferred at December 31, 2005 whereas in 2005 we also recognized \$4.0 million of revenue originally deferred at December 31, 2004.

Research and development contract revenue. Research and development contract revenue primarily relates to cost reimbursement research and development contracts associated with the development of PEM fuel cell technology. We generally share in the cost of these programs with our cost-sharing percentages being from 20% to 67% of total project costs. Revenue from time and material contracts is recognized on the basis of hours expended plus other reimbursable contract costs incurred during the period. Revenue from fixed fee contracts is recognized on the basis of percentage of completion. We expect to continue certain research and development contract work that is directly related to our current product development efforts.

Research and development contract revenue for the year ended December 31, 2007 increased to \$13.2 million from \$5.2 million in 2006. The acquisitions of Cellex and General Hydrogen accounted for approximately \$1.2 million of the increase. Of the remaining \$6.8 million increase, approximately \$2.2 million resulted from additional U.S. Department of Energy (DOE) contracts awarded in 2007; \$3.5 million resulted from 4 additional contracts received from the U.S. Department of Defense (DOD) in 2007; and revenue from new contracts with NASA, the European Union, and Montana State University contributed approximately \$1.8 million in 2007. These increases were partially offset by decreases resulting from completion of activities under other government contracts in 2006.

Research and development contract revenue decreased to \$5.2 million for the year ended December 31, 2006 from \$8.6 million for the year ended December 31, 2005. The decrease was the result of spending levels decreasing for material purchases and subcontractor activity as certain DOE and DOD programs wound down and decreased activity under our contract with the National Institute of Standards and Technology (NIST), and with Honda R&D Co., Ltd. of Japan.

Cost of product and service revenue. Cost of product and service revenue includes the direct material cost incurred in the manufacture of the products we sell as well as the labor and material costs incurred for product maintenance, replacement parts and service under our contractual obligations. These costs consist primarily of production materials and fees paid to outside suppliers for subcontracted components and services.

Cost of product and service revenue for the year ended December 31, 2007 increased \$4.6 million to \$9.4 million compared to \$4.8 million in 2006. Approximately \$713,000 of the increase is related to the acquisitions of Cellex and General Hydrogen. The remaining increase of \$3.9 million primarily related to a \$2.0 million charge for certain future expected service and warranty costs for existing fuel cell units in the field. Also contributing to the increase was an increase in shipments and servicing costs of the larger installed base.

Cost of product and service revenue increased to \$4.8 million for the year ended December 31, 2006 from \$4.1 million for the year ended December 31, 2005. The year over year increase to cost of product and service revenue was primarily the result of an increase in warranty costs resulting from a greater number of units placed in the field during 2006.

Table of Contents

Cost of research and development contract revenue. Cost of research and development contract revenue includes costs associated with research and development contracts including: cash and non-cash compensation and benefits for engineering and related support staff, fees paid to outside suppliers for subcontracted components and services, fees paid to consultants for services provided, materials and supplies used and other directly allocable general overhead costs allocated to specific research and development contracts.

Cost of research and development contract revenue for the year ended December 31, 2007 increased \$11.4 to \$19.0 million from \$7.6 million in 2006. The acquisitions of Cellex and General Hydrogen contributed approximately \$1.3 million of this increase. The remainder of the increase, about \$10.1 million, was associated with the additional effort applied to funded research and development projects commensurate with the additional revenue mentioned above.

Cost of research and development contract revenue decreased to \$7.6 million for the year ended December 31, 2006 from \$12.1 million for the year ended December 31, 2005. The decrease in these costs was directly related to the decreased activity under the development agreements described above under research and development contract revenue.

Research and development expense. Research and development expense includes: materials to build development and prototype units, cash and non-cash compensation and benefits for the engineering and related staff, expenses for contract engineers, fees paid to outside suppliers for subcontracted components and services, fees paid to consultants for services provided, materials and supplies consumed, facility related costs such as computer and network services, and other general overhead costs associated with our research and development activities.

Research and development expense decreased to \$39.2 million for the year ended December 31, 2007 from \$41.6 million in 2006. The acquisitions of Cellex and General Hydrogen contributed \$6.4 million of additional research and development expense which was more than offset by a reduction of nearly \$8.8 million related to the activities of the pre-acquisition business. This reduction in expense is primarily related to the Company's ability to receive increased third party funding to perform certain activities necessary to advance our understanding of various types of fuel cell systems consistent with our long-term goal of developing systems and applications. As a result of the receipt of funding for certain research and development programs, the related costs associated with these projects is included in cost of contract research and development revenue as described above.

Research and development expense increased to \$41.6 million for the year ended December 31, 2006 from \$35.6 million for the year ended December 31, 2005. This increase was primarily the result of our accelerated efforts to advance the development of our next generation continuous run product combined with continued research and development activities related to future product initiatives. We also had fewer resources allocated to research and development programs reflected in cost of revenues for research and development under DOE, NIST and Honda research and development contracts (as discussed above).

Selling, general and administrative expenses. Selling, general and administrative expenses includes cash and non-cash compensation, benefits and related costs in support of our general corporate functions, including general management, finance and accounting, human resources, selling and marketing, information technology and legal services.

Selling, general and administrative expenses increased \$7.0 million to \$19.3 million for the year ended December 31, 2007. Approximately \$4.5 million of the increase is related to the acquisition of Cellex and General Hydrogen. The remaining \$2.5 million of the increase is primarily related to the increased size of our sales group in an effort to increase market adoption of our fuel cell technology.

Selling, general and administrative expenses increased to \$12.3 million for the year ended December 31, 2006 from \$9.0 million for the year ended December 31, 2005. The increase in selling, general and

Table of Contents

administrative expenses in 2006 from 2005 was primarily a result of increased headcount, charges related to severance packages for departing employees and payments made to strategic consultants.

Interest income and net realized gains/losses from the sale of available-for-sale securities. Interest income and net realized gains/losses from the sale of available-for-sale securities consists primarily of interest earned on our cash, cash equivalents and available-for-sale securities, as well as the net realized gain/loss from the sale of available-for-sale securities.

Interest income and net realized gains/losses from the sale of available-for-sale securities increased to \$12.3 million for the year ended December 31, 2007 from \$8.3 million for the year ended December 31, 2006. Nearly all of the increase of \$4.0 million was the result of higher yields on our cash and available-for-sale securities in 2007. Total net realized gains/losses from the sale of available-for-sale securities was a gain of \$118,000 and \$68,000 for the years ended December 31, 2007 and 2006, respectively.

Interest income and net realized gains/losses from the sale of available-for-sale securities, increased to \$8.3 million for the year ended December 31, 2006 from \$2.2 million for the year ended December 31, 2005. The increase was attributable to higher cash and available-for-sale securities balances resulting from the sale of our Class B capital stock to Smart Hydrogen Inc. in 2006 and slightly higher yields on our investment portfolio.

Interest and other expenses. Interest and other expenses consists of interest on repayable government assistance amounts related to the activities of Cellex and General Hydrogen, interest due to a long-term obligation related to the purchase of our Latham facilities, interest paid on capital lease obligations and foreign currency exchange loss.

Interest and other expenses increased approximately \$409,000 to \$580,000 for the year ended December 31, 2007, compared to \$171,000 for the year ended December 31, 2006. This increase is primarily related to foreign currency exchange losses from our newly acquired Canadian operations.

Interest and other expenses was \$171,000 for the year ended December 31, 2006, compared to \$146,000 for the year ended December 31, 2005. As of December 31, 2006 the debt associated with the purchase of the facility was paid for in full.

Equity in losses of affiliates. Equity in losses of affiliates for the year ended December 31, 2005 was \$5.8 million. Equity in losses of affiliates, which we accounted for under the equity method of accounting, was our proportionate share of the amount of the net loss of GE Fuel Cell Systems (GEFCS), and the amortization of our original investments. During the quarter ended December 31, 2005, the Company recorded an impairment loss equal to 100% of the remaining carrying value of the Company's investment in GEFCS due to the changes in the relationship that eventually resulted in GEFCS being dissolved in the first quarter of fiscal 2006.

Income taxes. We did not report a benefit for federal and state income taxes in the consolidated financial statements as the deferred tax asset generated from our net operating loss has been offset by a full valuation allowance because it is more likely than not that the tax benefits of the net operating loss carry forward will not be realized.

Critical Accounting Policies and Estimates

The preparation of financial statements in conformity with generally accepted accounting principles and related disclosures requires management to make estimates and assumptions that affect:

the amounts reported for assets and liabilities;

the disclosure of contingent assets and liabilities at the date of the financial statements; and

the amounts reported for revenues and expenses during the reporting period.

Table of Contents

Specifically, we must use estimates in determining the economic useful lives of assets, including identifiable intangible assets, and various other recorded or disclosed amounts. Therefore, our consolidated financial statements and related disclosures are necessarily affected by these estimates. We evaluate these estimates on an ongoing basis, utilizing historical experience and other methods considered reasonable in the particular circumstances. Nevertheless, actual results may differ significantly from these estimates. To the extent that actual outcomes differ from estimates, or additional facts and circumstances cause management to revise estimates, our financial position as reflected in our consolidated financial statements will be affected. Any effects on business, financial position or results of operations resulting from revisions to these estimates are recorded in the period in which the facts that give rise to the revision become known.

We believe that the following are our most critical accounting policies affected by the estimates and assumptions the Company must make in the preparation of its consolidated financial statements and related disclosures:

Revenue recognition: We are a development stage enterprise currently performing field testing and marketing of our products to a limited number of customers, including telecom, utilities, government entities, distribution centers, and our distribution partners. This product is a limited edition fuel cell system that is intended to offer complementary, quality power while demonstrating the market value of fuel cells as a preferred form of alternative distributed power generation. Subsequent enhancements to our initial product are expected to expand the market opportunity for fuel cells by lowering the installed cost, decreasing operating and maintenance costs, increasing efficiency, improving reliability, and adding features such as grid independence and co-generation as well as UPS applications.

We apply the guidance within Staff Accounting Bulletin No. 104, Revenue Recognition in Financial Statements (SAB 104), to our initial sales contracts to determine when to properly recognize revenue. Our initial sales of products contain multiple obligations that may include a combination of fuel cell systems, continued service, maintenance and other support. While contract terms generally stipulate that title and risk of ownership pass and require payment shortly after delivery of the fuel cell system, or acceptance in the case of certain consignment sales, and also stipulate that payment is not contingent on the achievement of specific milestones or other substantive performance, the multiple obligations within our contractual arrangements are not accounted for separately based on our limited commercial experience and lack of evidence of fair value. As a result, we defer recognition of product and service revenue at the time of delivery and recognize revenue on a straight-line basis over the contractual service period, which is generally for periods of twelve to thirty months, or over the anticipated service period if expected to exceed the contractual service period. The costs associated with the product, service and other obligations are generally expensed as they are incurred. In the case of our limited consignment sales, we do not begin recognizing revenue on a deferred basis until the customer has accepted the product, at which time the risks and rewards of ownership have transferred, the price is fixed and we have a reasonable expectation of collecting upon billing.

As we gain commercial experience, including field experience relative to service and warranty obligations based on the sales of our initial products, the fair values for the multiple elements within our future contracts may become determinable and we may, in future periods, recognize revenue upon delivery of the product or we may continue to defer recognition, based on application of appropriate guidance within EITF 00-21, Accounting for Revenue Arrangements with Multiple Deliverables, or changes in the manner in which we structure contractual agreements, including our agreements with distribution partners.

Additionally, our research and development contract revenue primarily relates to cost reimbursement research and development contracts associated with the development of PEM fuel cell technology. The Company generally shares in the cost of these programs with cost sharing percentages between 20% and 67%. Revenue from time and material contracts is recognized on the basis of hours utilized, plus other reimbursable contract cost incurred during the period. Revenue from fixed fee contracts is recognized on the basis of percentage of completion. At December 31, 2007 and December 31, 2006, the Company had deferred contract revenue of approximately \$0 and \$461,000 respectively.

Table of Contents

Valuation of long-lived assets: We value long-lived assets at their fair value at the date of acquisition. We utilize third-party valuation experts in our assessments of the fair values of acquired long-lived assets and allocate purchase price to the acquired assets and liabilities assumed accordingly. We assess the impairment of long-lived assets, including identifiable intangible assets, and goodwill, if any, whenever events or changes in circumstances indicate that the carrying value may not be recoverable and, for goodwill, at least annually. Factors we consider important that could trigger an impairment review include, but are not limited to, the following:

significant underperformance relative to expected historical or projected future operating results;

significant changes in the manner of our use of the acquired assets or the strategy for our overall business;

significant negative industry or economic trends;

significant decline in our stock price for a sustained period; and

our market capitalization relative to net book value.

When we determine that the carrying value of long-lived assets, including identifiable intangible assets, and goodwill may not be recoverable based upon the existence of one or more of the above indicators of impairment, we would measure any impairment based upon the provisions of Statement of Financial Accounting Standards, or SFAS, No. 142, *Goodwill and Other Intangible Assets* and SFAS No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, as appropriate. Any resulting impairment loss could have a material adverse impact on our financial condition and results of operations. Based on the review during the year ended December 31, 2007, we do not believe that there were any triggering events or that an impairment charge is required.

Accounting for income taxes: As part of the process of preparing our consolidated financial statements, we are required to estimate our income taxes in each of the jurisdictions in which we operate. This process involves the estimation of our actual current tax exposure together with assessing temporary differences resulting from differing treatment of items for tax and accounting purposes. These differences, primarily net operating loss carryforwards, result in a net deferred tax asset. We must assess the likelihood that our deferred tax assets will be recovered from future taxable income, and to the extent that we believe that recovery is not likely, we must establish a valuation allowance. To the extent we establish a valuation allowance or increase this allowance in a period, we must include an expense or forego a benefit within income taxes in the consolidated statement of operations.

Under Section 382 of the Internal Revenue Code (IRC), the use of loss carryforwards may be limited if a change in ownership of a company, as defined by the IRC, occurs. The Company has determined that due to transactions involving the Company's shares by significant shareholders, a change of ownership has occurred under the provisions of IRC Section 382. As a result of this change of ownership, the net operating loss amounts have become limited. Accordingly, we have reduced our deferred tax asset related to the net operating loss carryforwards and the offsetting valuation allowance during 2007.

Significant management judgment is required in determining our provision for income taxes, our deferred tax assets and liabilities and any valuation allowance recorded against our net deferred tax assets. As of December 31, 2007, we have recorded a valuation allowance due to uncertainties related to our ability to utilize the net deferred tax assets, primarily consisting of net operating losses and credits which may be carried forward, before they expire. In the event that actual results differ from these estimates or we adjust these estimates in future periods, we may need to adjust the recorded valuation allowance, which could materially impact our financial position and results of operations. At December 31, 2007 and 2006, our net deferred tax assets have been offset in full by a valuation allowance. As a result, the net provision for income taxes is zero for the years ended December 31, 2007 and 2006. The Company adopted Financial Accounting Standards Board (FASB) Interpretation No. 48, *Accounting for Uncertainty in Income Taxes-an interpretation of FASB Statement*

Table of Contents

No. 109 (FIN 48), which clarifies the accounting for uncertainty in tax positions on January 1, 2007. No adjustment of opening balances was required and the adoption of this Interpretation did not have a material impact on the Company's consolidated financial statements.

Stock Based Compensation: We recognize stock-based compensation expense associated with the vesting of share based instruments in the statement of operations. Determining the amount of stock-based compensation to be recorded requires us to develop estimates to be used in calculating the grant-date fair value of stock options. We calculate the grant-date fair values using the Black-Scholes valuation model. The Black-Scholes model requires us to make estimates of the following assumptions:

Expected volatility The estimated stock price volatility was derived based upon a blend of implied volatility (i.e. management's expectation of volatility) and the Company's actual historic stock prices over the expected life of the options, which represents the Company's best estimate of expected volatility.

Expected option life The Company's estimate of an expected option life was calculated in accordance with the Staff Accounting Bulletin No. 107 (SAB 107) simplified method for calculating the expected term assumption. The simplified method is a calculation based on the contractual life of the associated options.

Risk-free interest rate We use the yield on zero-coupon U.S. Treasury securities for a period that is commensurate with the expected life assumption as the risk-free interest rate.

The amount of stock-based compensation recognized during a period is based on the value of the portion of the awards that are ultimately expected to vest. SFAS 123(R) requires forfeitures to be estimated at the time of grant and revised, if necessary, in subsequent periods if actual forfeitures differ from those estimates. The term "forfeitures" is distinct from "cancellations" or "expirations" and represents only the unvested portion of the surrendered option. We review historical forfeiture data and determine the appropriate forfeiture rate based on that data. We re-evaluate this analysis periodically and adjust the forfeiture rate as necessary. Ultimately, we will recognize the actual expense over the vesting period only for the shares that vest.

Recent Accounting Pronouncements

In September 2006, the FASB issued SFAS No. 157, "Fair Value Measurements" (SFAS No. 157). This new standard establishes a framework for measuring the fair value of assets and liabilities. This framework is intended to provide increased consistency in how fair value determinations are made under various existing accounting standards that permit, or in some cases require, estimates of fair market value. SFAS No. 157 also expands financial statement disclosure requirements about a company's use of fair value measurements, including the effect of such measures on earnings. This standard is effective for fiscal years beginning after November 15, 2007 and interim periods within those fiscal years, except for fair value measurement requirements for nonfinancial assets and liabilities that are not required or permitted to be measured at fair value on a recurring basis, which will be effective for fiscal years beginning after November 15, 2008 and interim periods within those fiscal years. The Company plans to adopt SFAS No. 157 on January 1, 2008 and does not expect the adoption to have a material effect on its consolidated financial position, consolidated results of operations, or liquidity.

In February 2007, the FASB issued SFAS No. 159, "The Fair Value Option for Financial Assets and Financial Liabilities Including an Amendment of SFAS No. 115" (SFAS No. 159). This new standard permits entities to choose to measure many financial instruments and certain warranty and insurance contracts at fair value on a contract-by-contract basis. This standard is effective for fiscal years beginning after November 15, 2007. The Company plans to adopt SFAS No. 159 on January 1, 2008 and does not expect the adoption to have a material effect on its consolidated financial position, consolidated results of operations, or liquidity.

Table of Contents

In December 2007, the FASB issued SFAS No. 160, *Noncontrolling Interests in Consolidated Financial Statements* an amendment of Accounting Research Bulletin No. 51 (SFAS No. 160). This new standard establishes accounting and reporting standards for ownership interests in subsidiaries held by parties other than the parent, the amount of consolidated net income attributable to the parent and to the noncontrolling interest, changes in a parent's ownership interest and the valuation of retained noncontrolling equity investments when a subsidiary is deconsolidated. The statement also establishes reporting requirements that provide sufficient disclosures that clearly identify and distinguish between the interests of the parent and the interests of the noncontrolling owners. This standard is effective for fiscal years beginning after December 15, 2008. The Company plans to adopt SFAS No. 160 on January 1, 2009 and is currently evaluating the effect, if any, SFAS No. 160 will have on its consolidated financial position, consolidated results of operations, or liquidity.

In December 2007, the FASB issued SFAS No. 141 (Revised 2007), *Business Combinations*, (SFAS No. 141R). This new standard applies to all transactions or other events in which an entity obtains control of one or more businesses, including those sometimes referred to as *true mergers* or *mergers of equals* and combinations achieved without the transfer of consideration. This standard replaces FASB Statement No. 141 and applies to all business entities, including mutual entities that previously used the pooling-of-interests method of accounting for some business combinations. The Company plans to adopt SFAS No. 141R on January 1, 2009 and is currently evaluating the effect, if any, SFAS No. 141R will have on its consolidated financial position, consolidated results of operations, or liquidity.

In December 2007, the FASB's Emerging Issues Task Force (EITF) issued EITF 07-01, *Accounting for Collaborative Arrangements Related to the Development and Commercialization of Intellectual Property* (EITF 07-01). This new standard prescribes the accounting for collaborations. It requires certain transactions between collaborators to be recorded in the income statement on either a gross or net basis within expenses when certain characteristics exist in the collaboration relationship. EITF 07-01 is effective for all collaborations existing after January 1, 2008. The Company plans to adopt EITF 07-01 on January 1, 2008 and does not expect the adoption to have a material effect on its consolidated financial position, consolidated results of operations, or liquidity.

Liquidity and Capital Resources

Our cash requirements depend on numerous factors, including completion of our product development activities, our ability to commercialize our on-site energy products, market acceptance of our systems and other factors. We expect to devote substantial capital resources to continue our development programs directed at commercializing our energy products for worldwide use, hiring and training our production staff, develop and expand our manufacturing capacity and continue expanding our production and our research and development activities. We expect to pursue the expansion of our operations through internal growth and strategic acquisitions and expect that such activities will be funded from existing cash, cash equivalents and available-for-sale securities, issuance of additional equity or debt securities or additional borrowings subject to market and other conditions. The failure to raise the funds necessary to finance our future cash requirements or consummate future acquisitions could adversely affect our ability to pursue our strategy and could negatively affect our operations in future periods. We anticipate incurring substantial additional losses over at least the next several years and believe that our current cash, cash equivalents and available-for-sale securities balances will provide sufficient liquidity to fund operations for at least the next twelve months.

Table of Contents

Several key indicators of liquidity are summarized in the following table:

(in thousands)	Years ended December 31,		
	2007	2006	2005
Cash, cash equivalents and available-for-sale securities	\$ 165,701	\$ 269,123	\$ 97,563
Working capital	163,906	267,002	95,511
Net loss	60,571	50,310	51,743
Net cash used in operating activities	49,311	46,107	39,869
Purchase of property, plant and equipment	2,944	1,275	1,000

Included in available-for-sale securities and working capital at December 31, 2007 is \$92.8 million of auction rate debt securities. The auction rate debt securities are collateralized by student loan debt securities issued by various states, in the United States, or state agencies. The Federal government guarantees the student loans that are collateralizing \$91.0 million of these securities. These auction rate debt securities are structured to be tendered at par, at the option of the investor, at auctions occurring every 27-30 days. The auctions that occurred in January of 2008 were successful. However, the recent disruption in the financial and capital markets has resulted in reduced liquidity of these auction rate debt securities and increased the liquidity risk associated with these securities as the auctions that have occurred beginning in February 2008 have not been successful. Each of the auction rate debt securities includes contractual provisions to deal with these events. The Company will continue to receive interest income on these debt securities; however, the interest rates will be at the maximum rate defined for each security. The default interest rates will be received until there is a successful auction or the Company sells these securities in the open market. Scheduled auctions will continue to take place at future pre-established dates. The Company, however, is required to hold these auction rate debt securities until there is a successful auction, until the debt securities mature, which would be an extended period of time (between 15 and 40 years), or until the Company decides to sell these securities on the open market.

Given the negative impact of the liquidity situation in the financial markets, as well as the failed auctions that have occurred, the fair value of these auction rate debt securities may become lower than their carrying value, and that difference may be significant. A continuation of the recent disruption in the financial and capital markets will continue to result in reduced liquidity to the Company and may result in impairment write-downs on the auction rate debt securities and/or realized losses on the disposition of these securities.

We have financed our operations through December 31, 2007 primarily from the sale of equity, which has provided cash in the amount of \$636.1 million. As of December 31, 2007 we had cash, cash equivalents and available-for-sale securities totaling \$165.7 million and working capital of \$163.9 million. Since inception, net cash used in operating activities has been \$397.7 million and cash used in investing activities has been \$220.5 million.

During the year ended December 31, 2007, the Company used \$49.3 million in cash for operating activities, generated \$33.1 million in cash from investing activities and received \$81,000 from financing activities. Net cash used in operating activities consisted primarily of a net loss of \$60.6 million offset partially by non-cash items, which include \$5.5 million for depreciation and amortization and \$5.4 million in stock based compensation. Cash provided by investing activities consisted of \$83.7 million of net purchases of available-for-sale securities, offset by \$2.9 million for the purchase of property, plant and equipment and \$47.7 million paid for acquisitions, net of cash received. Cash provided by financing activities in the amount of \$81,000 consisted of cash receipts of approximately \$481,000 from stock option exercises and our employee stock purchase plan, partially offset by the repayment of loans to General Hydrogen shareholders as a result of the acquisition of General Hydrogen.

Table of Contents

Other significant transactions impacting our liquidity and capital resources have been as follows:

Mergers & Acquisitions

On April 3, 2007, the Company completed the acquisition of all of the outstanding shares of Cellex, a development stage enterprise, for an aggregate purchase price, including acquisition costs, of \$46.1 million. The results of Cellex's operations have been included in the consolidated financial statements since that date. Cellex, based in Richmond, British Columbia, develops and commercializes fuel cell solutions that replace the industrial lead acid battery system used today in powering electric lift truck fleets in large-scale distribution centers. The following table summarizes the estimated fair values of the assets acquired and liabilities assumed at the date of acquisition.

<i>(Dollars in thousands)</i>	
Current assets	\$ 9,856
Property, plant and equipment	1,221
Identifiable intangible assets	10,000
Goodwill	27,586
Total assets acquired	48,663
Current liabilities	832
Long term liabilities	1,693
Total liabilities assumed	2,525
Net assets acquired	\$ 46,138

The entire \$10 million balance of intangible assets has been assigned to acquired technology, which is being amortized over 8 years.

On May 4, 2007, the Company completed the acquisition of all of the outstanding shares of General Hydrogen, a development stage enterprise, for an aggregate purchase price of \$12.4 million. The purchase price includes the settlement of \$3.0 million in senior secured loans previously made by the Company to General Hydrogen, as well as 571,429 warrants granted to shareholders of General Hydrogen that were valued at \$1.4 million. The warrants become exercisable when Plug Power's Common Stock trades at a volume weighted average price of \$7.00 or more for 10 consecutive trading days. The warrants carry an exercise price of \$.01 per share and expire four years from the date of issuance. The results of General Hydrogen's operations have been included in the consolidated financial statements since May 4, 2007. General Hydrogen is located in Richmond, British Columbia, Canada within close proximity to Cellex.

The following table summarizes the estimated fair values of the assets acquired and liabilities assumed at the date of acquisition.

<i>(Dollars in thousands)</i>	
Current assets	\$ 1,591
Property, plant and equipment	2,352
Identifiable intangible assets	6,900
Goodwill	8,579
Total assets acquired	19,422
Current liabilities	4,366
Long term liabilities	2,681
Total liabilities assumed	7,047
Net assets acquired	\$ 12,375

Table of Contents

Of the \$6.9 million of intangible assets, \$5.9 million has been assigned to acquired technology and \$1.0 million has been assigned to customer relationships, both of which are being amortized over 8 years.

By acquiring both General Hydrogen and Cellex, leaders in their industry, the Company expects to realize significant technological and operational synergies while pursuing high-value applications in the material handling market. As a result of the acquisitions, the Company is expected to be a leading provider of PEM fuel cell power units for electric lift trucks and is targeting the estimated \$1.5 billion industrial motive battery market. The acquisitions diversify the Company's product portfolio and add new revenue streams from a potentially significant market.

During October 2007, Plug Power integrated the operations of both companies into one organization. Further, the Company anticipates that higher volume product manufacturing activities will be established in Plug Power's Latham, N.Y. facility. The Company intends to leverage Plug Power's existing commercial infrastructure and expects to avoid some of the expenditures typically associated with the transition to a manufacturing enterprise.

On March 25, 2003, we consummated a merger transaction with H Power pursuant to which we acquired H Power in a stock-for-stock exchange valued at approximately \$46.3 million. In connection with the transaction, H Power stockholders received 0.8305 shares of our common stock for each share of H Power common stock held immediately prior to the transaction. Immediately following the transaction H Power became a wholly owned subsidiary of the Company. As part of the acquisition, we acquired intellectual property and certain other assets including cash, cash equivalents and marketable securities of H Power worth approximately \$29.6 million, after payment of \$7.1 million of certain costs and expenses associated with the consummation of the merger, which were accounted for as additional purchase price.

Public Offerings

In November 1999, we completed an initial public offering of 6,782,900 shares of common stock, which includes additional shares purchased pursuant to exercise of the underwriters' over allotment option. We received proceeds of \$93.0 million, which was net of \$8.7 million of expenses and underwriting discounts relating to the issuance and distribution of the securities.

In July 2001, we completed a follow-on public offering of 4,575,000 shares of common stock, which includes additional shares purchased pursuant to exercise of the underwriters' over allotment option. We received proceeds of \$51.6 million, which was net of \$3.3 million of expenses and underwriting discounts relating to the issuance and distribution of the securities.

In November 2003, the Company completed a public offering of 11,700,000 shares of common stock. We received proceeds of \$55.0 million, net of \$3.5 million of expenses and placement fees relating to the issuance and distribution of the securities.

In August 2005, the Company completed a public offering of 12,000,000 shares of common stock. We received proceeds of \$70.6 million, net of expenses and placement fees relating to the issuance and distribution of the securities.

Private Placements

In July 2001, simultaneous with the closing of the follow-on public offering, we closed a private equity financing of 416,666 shares of common stock to GE Power Systems Equities, Inc., an indirect wholly owned subsidiary of General Electric Company, and 416,666 shares of common stock to Edison Development Corporation, an indirect wholly owned subsidiary of DTE Energy Company, raising an additional \$9.6 million in net proceeds.

Table of Contents

In June 2006, the Company completed a private placement with Smart Hydrogen Inc. whereby the Company sold 395,000 shares of Class B Capital Stock, a class of preferred stock of the Company, which are convertible into 39,500,000 shares of common stock of the Company, and 11,240 shares of common stock of the Company to Smart Hydrogen for an aggregate net purchase price of approximately \$214.4 million. The purchase price per share of the shares sold to Smart Hydrogen, on an as-converted into common stock basis, was \$5.50. The Buyer also contemporaneously purchased 1,825,000 shares of common stock of the Company from DTE Energy Foundation. Following the closing of these transactions, the Buyer owned approximately 35% of the Company's outstanding common stock on an if-converted basis.

Initial Capital Contributions

We were formed in June 1997 as a joint venture between Mechanical Technology Incorporated and Edison Development Corporation, an indirect wholly owned subsidiary of DTE Energy Company. At formation, Mechanical Technology Incorporated contributed assets related to its fuel cell program, including intellectual property, 22 employees, equipment and the right to receive government contracts for research and development of PEM fuel cell systems, if awarded. Edison Development Corporation contributed or committed to contribute \$9.0 million in cash, expertise in distributed power generation and marketplace presence to distribute and sell stationary fuel cell systems.

In aggregate, Mechanical Technology Incorporated has made cash contributions of \$27.0 million plus non-cash contributions of \$14.2 million, while Edison Development Corporation has made aggregate cash contributions of \$46.2 million, including \$5.0 million in connection with the closing of a private placement of our common stock in July, 2001. Mechanical Technology Incorporated and Edison Development Corporation have not made any additional cash or non-cash contributions since October 1999 and July 2001, respectively.

GE Fuel Cell Systems

In March 2006, the Company, GE MicroGen, Inc. a wholly-owned subsidiary of General Electric Company, or GE, and GE restructured their service and equity relationships by terminating the joint venture, GEFCS, and the associated distributor and other agreements, and entering into a new development collaboration agreement. Under the new agreement, the Company and GE (through its Global Research unit) have agreed to collaborate on programs including but not limited to development of tools, materials and components that can be applied to various types of fuel cell products. The specific programs to be undertaken under the agreement, and the detailed terms and conditions thereof, remain subject to agreement by both parties. It is anticipated that such programs could also include collaboration on sales and marketing opportunities for the Company's products. Under the terms of the new development collaboration agreement, the Company is obligated to purchase \$1 million of services from GE prior to December 31, 2008. The development collaboration agreement is scheduled to terminate on the earlier of (i) December 31, 2014 or (ii) upon completion of a certain level of program activity. As of December 31, 2007 the obligation remaining under the contract was approximately \$465,000.

Grant Agreements

Since our inception we have been awarded, or participated in, federal and state government contracts related to research, development, test and demonstration of our PEM fuel cell technology. These contracts are primarily cost reimbursement contracts associated with the development of our PEM fuel cell technology. We have recognized research and development contract revenue of approximately \$75.5 million related to federal and state government contracts, and commercial contracts. We generally share in the cost of these programs, with cost-sharing percentages between 20% and 67%. We expect to continue certain research and development contract work that is directly related to our current product development efforts.

Table of Contents*Contractual Obligations*

Contractual obligations as of December 31, 2007, under agreements with non-cancelable terms are as follows:

	Total	2008	2009	2010	2011	2012	Thereafter
Operating lease obligations	\$ 6,223,736	\$ 1,948,912	\$ 1,641,688	\$ 1,583,706	\$ 1,049,430	\$	\$
Purchase obligations	6,639,399	5,589,602	630,268	205,650	213,879		
Other obligations (A), (B), (C)	481,780	481,780					
Total	\$ 13,344,915	\$ 8,020,294	\$ 2,271,956	\$ 1,789,356	\$ 1,263,309	\$	\$

(A) The Company has a contractual obligation to NYSERDA, a New York State Government agency, to pay royalties to NYSERDA based on 0.5% of net sales of our GenCore® and GenSys® products. See Note 17 of the Consolidated Financial Statements for more detail.

(B) The Company has contractual obligations with Technology Partnerships Canada (TPC), a Canadian Government agency, to pay royalties to TPC based on 2.06% of gross revenues. The Company is currently in negotiations with the Canadian Government regarding these obligations and the terms of the two TPC agreements.

The Company has a contractual obligation to the National Research Council of Canada (NRC), a Canadian Government agency, through an Industrial Research Assistance Program agreement, to pay royalties to NRC based on 3.5% of gross revenues.

See Note 10 of the Consolidated Financial Statements for more detail.

(C) The Company has a contractual obligation with General Electric (GE) through its Global Research unit. Under the terms of the new development collaboration agreement, the Company is obligated to purchase \$1 million of services from GE in connection with this collaboration prior to December 31, 2008. The development collaboration agreement is scheduled to terminate on the earlier of (i) December 31, 2014 or (ii) upon the completion of a certain level of program activity. See Note 17 of the Consolidated Financial Statements for more detail.

Item 7A. Quantitative and Qualitative Disclosures about Market Risk

We invest our excess cash in government, government backed and interest-bearing investment-grade securities that we generally hold for the duration of the term of the respective instrument. We do not utilize derivative financial instruments, derivative commodity instruments or other market risk sensitive instruments, positions or transactions in any material fashion. Accordingly, we believe that, while the investment-grade securities we hold are subject to changes in the financial standing of the issuer of such securities, we are not subject to any material risks arising from changes in interest rates, foreign currency exchange rates, commodity prices, equity prices or other market changes that affect market risk sensitive instruments.

The auction rate debt securities are collateralized by student loan debt securities issued by various states, in the United States, or state agencies. The Federal government guarantees \$91.0 million of these student loan debt securities. These auction rate debt securities are structured to be tendered at par, at the option of the investor, at auctions occurring every 27-30 days. The auctions that occurred in January of 2008 were successful. However, the recent disruption in the financial and capital markets has resulted in reduced liquidity of these auction rate debt securities and increased the liquidity risk associated with these securities as the auctions that have occurred beginning in February 2008 have not been successful. Each of the auction rate debt securities has provisions to deal with these events. The Company will continue to receive interest income on these debt securities; however, the interest rates will be at the maximum rate defined for each security. The default interest rates will be received until there is a successful auction or the Company sells these securities in the open market. Scheduled auctions will continue to take place at future pre-established dates. The Company, however, is required to hold these

Table of Contents

auction rate debt securities until there is a successful auction, until the debt securities mature, which would be an extended period of time (between 15 and 40 years), or until the Company sells these securities on the open market.

A portion of the Company's total revenue was attributable to our operations in Canada. Our exposure to changes in foreign currency rates primarily arises from short-term inter-company transactions with our Canadian subsidiaries and from client receivables in different currencies. Foreign sales are mostly made by our Canadian subsidiaries in their respective countries and are typically denominated in Canadian dollars. Our foreign subsidiaries incur most of their expenses in their local currency as well, which helps minimize our risk of exchange rate fluctuations. Accordingly, the Company's financial results are affected by risks such as currency fluctuations, particularly between the U.S. dollar and the Canadian dollar. As exchange rates vary, the Company's results can be materially affected.

In addition, the Company may source inventory among its worldwide operations. This practice can give rise to foreign exchange risk resulting from the varying cost of inventory to the receiving location as well as from the revaluation of intercompany balances. The Company mitigates this risk through local sourcing efforts.

Item 8. Financial Statements and Supplementary Data

The Company's consolidated financial statements included in this report beginning at page F-1 are incorporated in this Item 8 by reference.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

None.

Item 9A. Controls and Procedures

(a) Conclusion Regarding the Effectiveness of Disclosure Controls and Procedures.

Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we conducted an evaluation of the effectiveness of our disclosure controls and procedures, as such term is defined under Rule 13a-15(e) promulgated under the Securities Exchange Act of 1934, as amended (the Exchange Act). Based on this evaluation, our principal executive officer and our principal financial officer concluded that, as of the end of the period covered by this annual report, our disclosure controls and procedures were effective, in that they provide reasonable assurance that information required to be disclosed by us in the reports we file or submit, under the Exchange Act, is recorded, processed, summarized and reported within the time period specified in the Securities and Exchange Commission's rules and forms.

(b) Management's Report on Internal Control Over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rules 13a-15(f) and 15d-15(f). Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on our evaluation under the framework in *Internal Control - Integrated Framework*, our management concluded that the Company maintained effective internal control over financial reporting as of December 31, 2007.

In making this assessment, management has excluded the internal control over financial reporting of Cellex Power Products, Inc. and General Hydrogen Corporation, which were acquired during 2007 and whose financial statements constitute \$68.9 million of total consolidated assets and \$13.6 million of consolidated net loss as of and for the year ended December 31, 2007.

Table of Contents

(c) Attestation Report of the Registered Public Accounting Firm

The attestation report of the Company's independent registered public accounting firm regarding internal control over financial reporting is included on page F-3 of this Annual Report on Form 10-K and incorporated herein by reference.

(d) Changes in Internal Control Over Financial Reporting

There were no changes in the Company's internal control over financial reporting identified in connection with the evaluation of such internal control that occurred during the Company's last fiscal quarter that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

Item 9B. Other Information

Not applicable.

Item 10. Directors, Executive Officers and Corporate Governance

(a) Directors

Incorporated herein by reference is the information appearing under the captions "Information about our Directors" and "Compliance with Section 16(a) of the Securities Exchange Act of 1934" in the Company's definitive Proxy Statement for its 2008 Annual Meeting of Stockholders to be filed with the Security and Exchange Commission.

(b) Executive Officers

Incorporated herein by reference is the information appearing under the captions "Executive Officers" and "Compliance with Section 16(a) of the Securities Exchange Act of 1934" in the Company's definitive Proxy Statement for its 2008 Annual Meeting of Stockholders to be filed with the Security and Exchange Commission.

(c) Code of Business Conduct and Ethics

We have adopted a Code of Business Conduct and Ethics that applies to all officers, directors, employees and consultants of the Company. The Code of Business Conduct and Ethics is intended to comply with Item 406 of Regulation S-K of the Securities Exchange Act of 1934 and with applicable rules of The NASDAQ Stock Market, Inc. Our Code of Business Conduct and Ethics is posted on our Internet website under the "Investor" page. Our Internet website address is www.plugpower.com. To the extent required or permitted by the rules of the SEC and NASDAQ, we will disclose amendments and waivers relating to our Code of Business Conduct and Ethics in the same place as our website.

Item 11. Executive Compensation

Incorporated herein by reference is the information appearing under the caption "Executive Compensation" in the Company's definitive Proxy Statement for its 2008 Annual Meeting of Stockholders to be filed with the Security and Exchange Commission.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

Incorporated herein by reference is the information appearing under the caption "Principal and Management Stockholders" in the Company's definitive Proxy Statement for its 2008 Annual Meeting of Stockholders to be filed with the Securities and Exchange Commission.

Table of Contents*Equity Compensation Plan Information*

The following table gives information about the shares of Common Stock that may be issued upon the exercise of options, restricted stock and warrants under the Plug Power, L.L.C. Second Amendment and Restatement of the Membership Option Plan (1997 Plan), the Company's 1999 Stock Option and Incentive Plan, as amended (1999 Stock Option Plan) and the Company's 1999 Employee Stock Purchase Plan, as of December 31, 2007.

Plan Category	Number of shares to be issued upon exercise of outstanding options, warrants and rights(a)	Weighted average exercise price of outstanding options, warrants and rights(b)	Number of shares remaining available for future issuance under equity compensation plans (excluding shares reflected in column(a))(c)
Equity compensation plans approved by security holders	7,363,010(1)	\$ 8.17	3,670,731(2)
Equity compensation plans not approved by security holders(3)	571,429(3)	0.01	
Total	7,934,439	\$ 7.58	3,670,731(2)

- (1) Represents 6,578,313 outstanding options and 784,697 shares of unvested restricted stock issued under the 1997 Plan and 1999 Stock Option Plan.
- (2) Includes 3,261,763 shares available for future issuance under the 1999 Stock Option Plan and 408,968 shares available for future issuance under the 1999 Employee Stock Purchase Plan. The 1999 Stock Option Plan incorporates an evergreen formula pursuant to which the aggregate number of shares reserved for issuance under the 1999 Stock Option Plan will increase on the first day of January and July each year. On each January 1 and July 1, the aggregate number of shares reserved for issuance under the 1999 Stock Option Plan increases by 16.45% of any net increase in the total number of outstanding shares since the preceding July 1 or January 1, as the case may be. In accordance with this formula, on January 1, 2008, the maximum number of shares remaining available for future issuance under the 1999 Stock Option Plan is 3,315,697.
- (3) Represents 571,429 warrants issued to General Hydrogen shareholders in connection with the acquisition of General Hydrogen.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Stockholders

Plug Power Inc.:

We have audited the accompanying consolidated balance sheets of Plug Power Inc. and subsidiaries (a development stage enterprise) as of December 31, 2007 and 2006, and the related consolidated statements of operations, stockholders' equity and comprehensive loss, and cash flows for each of the years in the three-year period ended December 31, 2007, and the information included in the cumulative from inception presentations for the period January 1, 2001 to December 31, 2007 (not separately presented herein). These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Plug Power Inc. and subsidiaries (a development stage enterprise) as of December 31, 2007 and 2006, and the results of their operations and their cash flows for each of the years in the three-year period ended December 31, 2007, and the information included in the cumulative from inception presentations for the period January 1, 2001 to December 31, 2007 (not separately presented herein), in conformity with U.S. generally accepted accounting principles.

As discussed in Note 1 to the consolidated financial statements, effective January 1, 2006, the Company adopted Financial Accounting Standards Board Statement of Financial Accounting Standards No. 123 (Revised), *Share-Based Payment*.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Plug Power Inc.'s internal control over financial reporting as of December 31, 2007, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated March 17, 2008, expressed an unqualified opinion on the effectiveness of Plug Power Inc.'s internal control over financial reporting.

Our report dated March 17, 2008 on internal control over financial reporting as of December 31, 2007, contains an explanatory paragraph that states Plug Power Inc. acquired Cellex Power Products, Inc. and General Hydrogen Corporation during 2007, and management excluded from its assessment of the effectiveness of Plug Power Inc.'s internal control over financial reporting as of December 31, 2007, the internal control over financial reporting associated with Cellex Power Products, Inc. and General Hydrogen Corporation whose total assets of \$68.9 million and total net loss of \$13.6 million are included in the consolidated financial statements of Plug Power Inc. and subsidiaries (a development stage enterprise) as of and for the year ended December 31, 2007. Our audit of internal control over financial reporting of Plug Power Inc. also excluded an evaluation of the internal control over financial reporting of Cellex Power Products, Inc. and General Hydrogen Corporation.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Stockholders

Plug Power Inc.

We have audited internal control over financial reporting of Plug Power Inc. and subsidiaries (a development stage enterprise) as of December 31, 2007, based on criteria established in *Internal Control Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control Over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Plug Power Inc. and subsidiaries (a development stage enterprise) maintained, in all material respects, effective internal control over financial reporting as of December 31, 2007, based on criteria established in *Internal Control Integrated Framework* issued by COSO.

Plug Power Inc. acquired Cellex Power Products, Inc. and General Hydrogen Corporation during 2007, and management excluded from its assessment of the effectiveness of Plug Power Inc.'s internal control over financial reporting as of December 31, 2007, the internal control over financial reporting associated with Cellex Power Products, Inc. and General Hydrogen Corporation whose total assets of \$68.9 million and total net loss of \$13.6 million are included in the consolidated financial statements of Plug Power Inc. and subsidiaries (a development stage enterprise) as of and for the year ended December 31, 2007. Our audit of internal control over financial reporting of Plug Power Inc. also excluded an evaluation of the internal control over financial reporting of Cellex Power Products, Inc. and General Hydrogen Corporation.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Plug Power Inc. and subsidiaries as of December 31, 2007 and 2006, and the related consolidated statements of operations, stockholders' equity and comprehensive loss, and cash flows for each of the years in the three-year period ended December 31, 2007, and the information included in the cumulative from inception presentations for the period January 1, 2001 to December 31, 2007 (not separately presented herein), and our report dated March 17, 2008 expressed an unqualified opinion on those consolidated financial statements.
