

GWG Holdings, Inc.
Form 424B3
August 08, 2014

Filed Pursuant to Rule 424(b)(3)
File Nos. 333-174887 and 333-174887-01

PROSPECTUS SUPPLEMENT NO. 2
to Prospectus dated April 17, 2014

Offering Amount \$250,000,000

GWG HOLDINGS, INC.

a Delaware corporation

Renewable Secured Debentures

The information contained in this prospectus supplement amends and updates the prospectus dated April 17, 2014 (relating to our post-effective amendment to registration statement on Form S-1/A, filed with the SEC on April 15, 2014) (SEC File Nos. 333-174887 and 333-174887-01) (and which we refer to herein simply as the “prospectus”), and should be read in conjunction therewith. GWG Life, LLC, a Delaware limited liability company formerly known as GWG Life Settlements, LLC, a wholly owned subsidiary of GWG Holdings, Inc., is also a registrant under the referenced registration statement as a guarantor of the Renewable Secured Debentures offered hereby (the “debentures”). Please keep this prospectus supplement with your prospectus for future reference.

Investing in our debentures may be considered speculative and involves a high degree of risk, including the risk of losing your entire investment. See the “Risk Factors” section of our prospectus for the risks you should consider before buying our debentures. An investment in our debentures is not suitable for all investors. Persons should not invest in the debentures unless they can afford to lose their entire investment. See the “Suitability Standards” section of this prospectus supplement, which sets forth the suitability standards that investors must meet in order to purchase the debentures.

The security provided for the debentures and entitling them to be referred to as “secured” includes an unconditional guarantee given by GWG Life, LLC, a subsidiary of the issuer. The value of this unconditional guarantee is based almost entirely on GWG Life’s own investment in another subsidiary, the primary assets of which are pledged as collateral for the repayment of amounts borrowed from a senior lender.

Capitalized terms contained in this prospectus supplement have the same meanings as in the prospectus unless otherwise stated herein.

RECENT EVENTS

On August 8, 2014, we filed our Quarterly Report on Form 10-Q for the period ended June 30, 2014. This prospectus supplement has been prepared primarily to set forth certain information contained in that report.

Neither the SEC nor any state securities commission has approved or disapproved of these securities or determined if this prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

The date of this prospectus supplement is August 8, 2014

RISK RELATING TO FORWARD-LOOKING STATEMENTS

Certain matters discussed in this prospectus supplement are forward-looking statements. We have based these forward-looking statements on our current expectations and projections about future events. Nevertheless, these forward-looking statements are subject to risks, uncertainties and assumptions about our operations and the investments we make, including, among other things, factors discussed in the “Risk Factors” section of our prospectus and the following:

- changes in the secondary market for life insurance;
- our limited operating history;
- the valuation of assets reflected on our financial statements;
- the reliability of our life expectancy estimates;
- the reliability of assumptions underlying our actuarial models;
- our reliance on continued access to debt financing;
- risks relating to the validity and enforceability of the life insurance policies we purchase;
- our reliance on information provided and obtained by third parties;
- federal and state regulatory matters;
- additional expenses, not reflected in our operating history, related to being a public reporting company;
- competition in the secondary life insurance market;
- the relative illiquidity of life insurance policies;
- life insurance company credit exposure;
- economic outlook;
- the performance of our investments in life insurance policies;
- financing requirements;
- litigation risks; and
- restrictive covenants contained in our borrowing agreements.

Some of the statements in this prospectus supplement that are not historical facts are “forward-looking” statements. Forward-looking statements can generally be identified by the use of words like “believes,” “could,” “possibly,” “probably,” “anticipates,” “estimates,” “projects,” “expects,” “may,” “will,” “should,” “seek,” “intend,” “plan,” “expect,” “consider” or the expressions or other variations, or by discussions of strategy that involve risks and uncertainties. All forward-looking

statements involve known and unknown risks, uncertainties and other factors that may cause our actual transactions, results, performance or achievements to be materially different from any future transactions, results, performance or achievements expressed or implied by such forward-looking statements. The cautionary statements set forth in the “Risk Factors” section and elsewhere in the prospectus, and in this prospectus supplement, identify important factors with respect to such forward-looking statements due to the life insurance focus of our business.

We base these forward-looking statements on current expectations and projections about future events and the information currently available to us. Although we believe that the assumptions for these forward-looking statements are reasonable, any of the assumptions could prove to be inaccurate. Consequently, no representation or warranty can be given that the estimates, opinions, or assumptions made in or referenced by this prospectus supplement will prove to be accurate. We caution you that the forward-looking statements in the prospectus and this prospectus supplement are only estimates and predictions. Actual results could differ materially from those anticipated in the forward-looking statements due to risks, uncertainties or actual events differing from the assumptions underlying these statements. These risks, uncertainties and assumptions include, but are not limited to, those discussed in the prospectus and this prospectus supplement.

Although federal securities laws provide a safe harbor for forward-looking statements made by a public company that files reports under the federal securities laws, this safe harbor is not available to certain issuers, including issuers that do not have their equity traded on a recognized national exchange or the Nasdaq Capital Market. Our common stock does not trade on any recognized national exchange or the Nasdaq Capital Market. As a result, we will not have the benefit of this safe harbor protection in the event of any legal action based upon a claim that the material provided by us contained a material misstatement of fact or was misleading in any material respect because of our failure to include any statements necessary to make the statements not misleading.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Note: The following discussion and analysis of the financial condition and results of operations of the Company are derived from our Quarterly Report on Form 10-Q for the period ended June 30, 2014, filed with the SEC on August 8, 2014. We have not materially updated this discussion in any way, although it may be presented in a different order than in our Quarterly Report. As indicated in that report, this discussion and analysis is based on the beliefs of our management, as well as assumptions made by, and information currently available to, our management. The statements in this discussion and analysis concerning expectations regarding our future performance, liquidity and capital resources, as well as other non-historical statements in this discussion and analysis, are forward-looking statements. See "Risks Relating to Forward-Looking Statements" above. These forward-looking statements are subject to numerous risks and uncertainties. Our actual results could differ materially from those suggested or implied by any forward-looking statements.

You should read the following discussion in conjunction with our condensed consolidated financial statements and related notes beginning at page F-1 of this prospectus supplement, as well as our consolidated financial statements and related notes contained within the prospectus.

Overview

We are engaged in providing financial services in the emerging secondary market for life insurance policies. Our financial service offerings are targeted towards consumers owning life insurance who can benefit from the actuarial value of their life insurance policy. To date, our primary financial service has been to offer consumers the ability to sell their policy for cash. In addition, we have offered investors the opportunity to participate in our business through a series of debt offerings. We are in the process of expanding the services we offer consumers who own life insurance by offering them options such as to retain a portion of their policy benefits or to exchange their life insurance for a more desirable asset. All of the services we offer are based upon acquiring, or otherwise financing, life insurance policy benefits from consumers in the secondary market at a discount to the face value of the insurance benefit. Once we purchase or finance a policy benefit at a discount, we continue paying the policy premiums in order to ultimately collect the face value of the insurance benefit. We seek to hold the policies to maturity, in order to ultimately collect the policy's benefit upon the insured's mortality. Our strategy is to build a profitable (purchased at discounts sufficient to provide a positive return on investment) and large (greater than 300 lives) portfolio of policies that are well diversified in terms of insurance carriers and the mortality profiles of insureds. We believe that diversification among insurers, mortality profiles, and medical conditions will lower our overall risk exposure, and that a larger number of policies (diversification in overall number) will provide our portfolio with greater actuarial stability.

In the first six months of 2014, we recognized \$231,000 of revenue from the receipt of \$300,000 in policy benefits. In addition, we recognized revenue from the change in fair value of our life insurance policies, net of premiums and carrying costs, of \$10,770,000. Interest expense, including amortization of the deferred financing costs and preferred stock dividends, was \$12,935,000 for the six months ended June 30, 2014, and selling, general and administrative expenses for the six months ended June 30, 2014 were \$4,840,000. Income tax benefit for the six months ended June 30, 2014 was \$2,272,000. Our net loss for the six months ended June 30, 2014 was \$4,488,000.

Critical Accounting Policies

Critical Accounting Estimates

The preparation of our consolidated financial statements in accordance with the Generally Accepted Accounting Principles (GAAP) requires us to make judgments, estimates and assumptions that affect the reported amounts of

assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. We base our judgments, estimates and assumptions on historical experience and on various other factors believed to be reasonable under the circumstances. Actual results could differ materially from these estimates. We evaluate our judgments, estimates and assumptions on a regular basis and make changes accordingly. We believe that the judgments, estimates and assumptions involved in the accounting for the valuation of investments in life insurance policies have the greatest potential impact on our consolidated financial statements and accordingly believe these to be our critical accounting estimates. Below we discuss the critical accounting policies associated with these estimates as well as certain other critical accounting policies.

Ownership of Life Insurance Policies—Fair Value Option

Our primary business involves the purchasing and financing of life insurance policies. As such, we account for the purchase of life insurance policies in accordance with Financial Accounting Standards Board's Accounting Standards Codification (FASB ASC) 325-30, Investments in Insurance Contracts, which requires us to use either the investment method or the fair value method. We have elected to account for these life insurance policies as investments using the fair value method.

We initially record our purchase of life insurance policies at the transaction price, which is the amount paid for the policy, inclusive of all fees and costs associated with the acquisition. The fair value of our investment in the portfolio of insurance policies is evaluated at the end of each reporting period. Changes in the fair value of the portfolio of life insurance policies are based on periodic evaluations and are recorded as changes in fair value of life insurance policies in our consolidated and combined statement of operations. The fair value is determined as the net present value of the life insurance portfolio's future expected cash flows that incorporates current life expectancy estimates and discount rate assumptions.

In addition to reporting our results of operations and financial condition based on the fair value of our life insurance policies as required by GAAP, management also makes calculations based on the weighted average expected internal rate of return of the policies. See “Non-GAAP Financial Measures” below.

Valuation of Insurance Policies

Unobservable inputs, as discussed below, are a critical component of our estimate for the fair value of our investments in life insurance policies. We currently use a probabilistic method of estimating and valuing the projected cash flows of our portfolio of life insurance policies, which we believe to be the preferred and most prevalent valuation method in the industry. In this regard, the most significant assumptions we make are the life expectancy estimates of the insureds and the discount rate applied to the projected cash flows to be derived from our portfolio.

In determining life expectancy estimates, we generally use actuarial medical reviews from independent medical underwriters. These medical underwriters summarize the health of the insured by reviewing historical and current medical records. The medical underwriters evaluate the health condition of the insured in order to produce an estimate of the insured’s mortality—a life expectancy report. In the case of a small face policy (\$1 million face value or less), we may use one life expectancy report or estimate life expectancy based on a modified methodology which does not use actuarial medical reviews from independent medical underwriters. The life expectancy estimate represents a range of probabilities for the insured’s mortality against a group of cohorts with the same age, sex and smoking status. These mortality probabilities represent a mathematical curve known as a mortality curve, which is then used to generate a series of expected cash flows from the life insurance policy over the expected lifespan of the insured. A discount rate is used to calculate the net present value of the expected cash flows. The discount rate represents the internal rate of return we expect to earn on investments in a policy or in the portfolio as a whole at the stated fair value. The discount rate used to calculate fair value of our portfolio incorporates the guidance provided by ASC 820, Fair Value Measurements and Disclosures. Many of our current underwriting review processes, including our policy of obtaining actuarial medical reviews from independent medical underwriters as described above, are undertaken in satisfaction of obligations under our revolving credit facility. As a result, we may in the future modify our underwriting review processes if permitted under our borrowing arrangements.

The table below provides the discount rate used to estimate the fair value of the life insurance policies for the period ending:

June 30, 2014	December 31, 2013
11.56%	11.69%

The change in the discount rate incorporates current information about discount rates applied by other reporting companies owning portfolios of life insurance policies, discount rates observed in the life insurance secondary market, market interest rates, the credit exposure to the issuing insurance companies and our estimate of the risk premium a purchaser would require to receive the future cash flows derived from our portfolio of life insurance policies. The discount rate to arrive at the fair value of our portfolio assumes an orderly and arms-length transaction (i.e., a non-distressed transaction in which neither seller nor buyer is compelled to engage in the transaction).

We engaged a third party, Model Actuarial Pricing Systems (MAPS), to prepare a third-party valuation of our life settlement portfolio. MAPS owns and maintains the portfolio pricing software we use. MAPS processed policy data, future premium data, life expectancy estimate data, and other actuarial information we supply to calculate a net present value for our portfolio using the specified discount rate of 11.56%. MAPS independently calculated the net present value of our portfolio of 289 policies to be \$267,895,692, which is the same fair value estimate we used on the balance sheet as of June 30, 2014, and furnished us with a letter documenting its calculation. A copy of such letter is filed as Exhibit 99.1 to our Quarterly Report on Form 10-Q for the period ended June 30, 2014, filed with the SEC on

August 8, 2014.

JOBS Act

On April 5, 2012, the Jumpstart Our Business Startups Act of 2012, or JOBS Act, was enacted. Section 107 of the JOBS Act provides that an “emerging growth company” can take advantage of the extended transition period provided in Section 7(a)(2)(B) of the Securities Act of 1933 for complying with new or revised accounting standards. This means that an “emerging growth company” can make an election to delay the adoption of certain accounting standards until those standards would apply to private companies. We have elected to delay such adoption of new or revised accounting standards and, as a result, we may not comply with new or revised accounting standards at the same time as other public reporting companies that are not “emerging growth companies.” This exemption will apply for a period of five years following our first sale of common equity securities under an effective registration statement or until we no longer qualify as an “emerging growth company” as defined under the JOBS Act, whichever is earlier.

Deferred Income Taxes

FASB ASC 740, Income Taxes, requires us to recognize deferred tax assets and liabilities for the future tax consequences attributable to temporary differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases. A valuation allowance is established for any portion of deferred tax assets that is not considered more likely than not to be realized.

We have provided a valuation allowance against the deferred tax asset related to a note receivable because we believe that, when realized for tax purposes, it will result in a capital loss that will not be utilized because we have no expectation of generating a capital gain within the applicable carryforward period. Therefore, we do not believe that it is more likely than not that the deferred tax asset will be realized.

We have also provided a valuation allowance against the deferred tax asset related to a tax basis capital loss generated with respect to its settlement and subsequent disposal of our investment in Athena Structured Funds PLC (see “Notes to Consolidated Financial Statements” Note 10). As we have no expectation of generating capital gains within the applicable carry-forward period, we do not believe that it is more likely than not that the deferred asset will be realized.

A valuation allowance is required to be recognized to reduce deferred tax assets to an amount that is more likely than not to be realized. Realization of deferred tax assets depends upon having sufficient past or future taxable income in periods to which the deductible temporary differences are expected to be recovered or within any applicable carryback or carryforward periods. We believe that it is more likely than not that we will be able to realize all of our deferred tax assets other than that which is expected to result in a capital loss.

Deferred Financing and Issuance Costs

Financing costs incurred to obtain financing under the revolving credit facility have been capitalized and are amortized using the straight-line method over the term of the revolving credit facility. The Series I Secured note obligations are reported net of issuance costs, sales commissions and other direct expenses, which are amortized using the interest method over the term of each respective borrowing. The Renewable Secured Debentures are reported net of issuance costs, sales commissions and other direct expenses, which are amortized using the interest method over the term of each respective borrowing. The Series A preferred stock is reported net of issuance costs, sales commissions, including the fair value of warrants issued, and other direct expenses, which are amortized using the interest method as interest expense over the three-year redemption period.

Principal Revenue and Expense Items

We earn revenues from three primary sources as described below.

Policy Benefits Realized. We recognize the difference between the death benefits and carrying values of the policy when an insured event has occurred and we determine that settlement and ultimate collection of the death benefits is realizable and reasonably assured. Revenue from a transaction must meet both criteria in order to be recognized. We generally collect the face value of the life insurance policy from the insurance company within 45 days of the insured's mortality.

Change in Fair Value of Life Insurance Policies. We have elected to carry our investments in life insurance policies at fair value in accordance with ASC 325-30, *Investments in Life Insurance Contracts*. Accordingly, we value our investments in our portfolio of life insurance policies each reporting period in accordance with the fair value principles discussed herein, which includes the expected payment of premiums for future periods.

Sale of a Life Insurance Policy or a Portfolio of Life Insurance Policies. In an event of a sale of a policy, we recognize gain or loss as the difference between the sale price and the carrying value of the policy on the date of the receipt of payment on such sale.

Our main components of expense are summarized below.

Selling, General and Administrative Expenses. We recognize and record expenses incurred in the operations of the purchasing and servicing of life insurance policies. These expenses include professional fees, salaries, and sales and marketing expenditures.

Interest Expense. We recognize and record interest expenses associated with the costs of financing our life insurance portfolio for the current period. These expenses include interest paid to our senior lender under our revolving credit facility, as well as all interest paid on our debentures and other outstanding indebtedness such as our subsidiary secured notes and dividends on convertible, redeemable preferred stock. When we issue long-term indebtedness, we amortize the issuance costs associated with such indebtedness over the outstanding term of the financing, and classify it as interest expense.

Results of Operations — Three and Six Months Ended June 30, 2014 Compared to the Same Periods in 2013

The following is our analysis of the results of operations for the periods indicated below. This analysis should be read in conjunction with our consolidated financial statements and related notes.

Revenue. Revenue recognized from the receipt of policy benefits was \$231,000 during both three and six months ended June 30, 2014. Revenue recognized from the receipt of policy benefits was \$5,218,000 and \$7,728,000 during the three and six months ended June 30, 2013, respectively. Revenue recognized from the change in fair value of our life insurance policies, net of premiums and carrying costs, was \$5,253,000 and \$10,770,000 for the three and six months ended June 30, 2014, respectively and \$2,515,000 and \$8,346,000 for the three and six months ended June 30, 2013, respectively. During the six-month period ended June 30, 2013, we purchased a higher volume of life insurance policies than we did during the same period in 2014. The change in fair value related to new policies acquired during the three and six month periods ended June 30, 2014 was \$1,595,000 and \$6,559,000 respectively, and \$2,471,000 and \$8,770,000 for those acquired during the three-month and six-month periods ended June 30, 2013, respectively. In each case, the increases in fair value were due to changes in the discount rates we use to calculate the net present value of cash flows expected from our portfolio of life insurance policies, change in fair value of policies acquired during

the period, and aging of the policies. Decreases in fair value were due to changes in life expectancy estimates. The discount rate incorporates current information about market interest rates, the credit exposure to the insurance companies that issued the life insurance policies in our portfolio and our estimate of the risk premium an investor would require to receive the future cash flows from our portfolio of life insurance policies. The discount rate used to estimate the fair value of the life insurance policies we own was 11.56% as of June 30, 2014, compared to 11.84% as of June 30, 2013. The decrease in discount rate was due to changes in a variety of factors in our fair value methodology. The carrying value of policies acquired during each quarterly reporting period are adjusted to their current fair value using the fair value discount rate applied to the portfolio as of that reporting date.

Expenses. Interest expense, including amortization of the deferred financing costs as well as preferred stock dividends, were \$6,608,000 and \$12,935,000 during the three and six months ended June 30, 2014, compared to \$4,942,000 and \$9,409,000 during the same periods of 2013, increases of \$1,666,000 and \$3,526,000, respectively. The increase was due the increased debt outstanding that went up from \$210,157,000 at June 30, 2013 to \$268,603,000 at June 30, 2014. Selling, general, and administrative expenses were \$2,787,000 and \$4,840,000 during the three and six months ended June 30, 2014, compared to \$2,507,000 and \$5,915,000 during the same periods of 2013, an increase of \$280,000 and a decrease of \$1,075,000, respectively. The decrease is mostly due to \$825,000 in discretionary bonuses equal to the tax effect of the conversion from an LLC to a corporation, paid to the original LLC members in the first quarter of 2013. The payments under our incentive compensation plan were also higher in the first quarter of 2013 compared to those in the same period of 2014 due to higher volume of life insurance contracts purchased.

Income Tax Expense. For the three and six months ended June 30, 2014, we had a loss of \$3,903,000 and \$6,759,000 before income taxes and recorded income tax benefit of \$1,317,000 and \$2,272,000, respectively, or 33.7% and 33.6%, respectively. In the same periods of 2013, we had \$3,559,000 and \$4,192,000 income before income taxes and recognized an income tax expense of \$1,802,000 and \$2,368,000, respectively, or 50.6% and 56.5%, respectively. The primary differences between our effective tax rate and the statutory federal rate are the accrual of preferred stock dividend expense, state taxes, and other non-deductible expenses. Excluding the impact of the dividends and other permanent differences, the effective tax rate for the three and six months ended June 30, 2014 and 2013 would have been 43.8% and 40.5%, respectively.

The following table provides a reconciliation of our income tax expense at the statutory federal tax rate to our actual income tax expense:

	Three Months Ended			Six Months Ended			Three Months Ended			Six Months Ended		
Six months ended:	June 30, 2014			June 30, 2014			June 30, 2013			June 30, 2013		
Statutory federal income tax	\$(1,327,000)	34.0	%	\$(2,298,000)	34.0	%	\$1,210,000	34.0	%	\$1,425,000	34.0	%
State income taxes, net of federal benefit	(209,000)	5.4	%	(352,000)	5.2	%	271,000	7.6	%	356,000	8.5	%
Series A preferred stock dividends	218,000	(5.6)	%	434,000	(6.4)	%	214,000	6.0	%	430,000	10.2	%
Other permanent differences	1,000	(0.1)	%	(56,000)	0.8	%	107,000	3.0	%	157,000	3.8	%
Total income tax expense	\$(1,317,000)	33.7	%	\$(2,272,000)	33.6	%	\$1,802,000	50.6	%	\$2,368,000	56.5	%

The most significant temporary differences between GAAP net income and taxable net income are the treatment of interest costs with respect to the acquisition of the life insurance policies and revenue recognition with respect to the mark-to-market of life insurance portfolio.

Liquidity and Capital Resources

We finance our business through a combination of policy benefit revenues, origination fees, equity offerings, debt offerings, and a credit facility. We have used our debt offerings and credit facility primarily for policy acquisition, policy servicing and portfolio related financing expenditures. We charge an intercompany origination fee in the amount of one to four percent of the face value of a life insurance policy's benefit when we acquire the related life

insurance policy. The origination fee we charge is included in the total purchase price we pay for a life insurance policy for purposes of our valuation and expected internal rate of return calculations, but is not netted against the purchase price we pay to a seller of an insurance policy. We generated cash flows of \$343,000 and \$1,309,000 from origination fees during the three and six months ended June 30, 2014, and \$536,000 and \$1,814,000 during the same periods in 2013. Profit from intra-company origination fees for life insurance policies retained by the Company are eliminated from our consolidated statements of operations. As such, the origination fees collected under our life insurance policy financing arrangements are reflected in our consolidated statements of cash flows as cash flows from financing activities as they are received form of borrowings used to finance the acquisition of life insurance policies. Our revolving bank line allows DLP II to borrow the funds necessary to pay origination fees to GWG Life. Our borrowing agreements allow us to use net proceeds of the Renewable Secured Debentures for policy acquisition, which includes origination fees. If the policy acquisition is not financed, no fees are included in the consolidated cash flows. See "Cash Flows" below for further information. We determine the purchase price of life insurance policies in accordance with ASC 325-30, Investments in Insurance Contracts, using the fair value method. Under the fair value method, the initial investment is recorded at the transaction price. Because the origination fees are paid from a wholly owned subsidiary to the parent company, these fees are not included in the transaction price as reflected in our consolidated financial statements. For further discussion on our accounting policies for life settlements, please refer to note 1 to our consolidated financial statements.

As of June 30, 2014, we had approximately \$28.9 million in combined available cash and available borrowing base surplus capacity under our revolving credit facility for the purpose of purchasing additional life insurance policies, paying premiums on existing policies, paying portfolio servicing expenses, and paying principal and interest on our outstanding financing obligations.

In September 2012, we concluded a Series A preferred stock offering, receiving an aggregate \$24.6 million in subscriptions for our Series A preferred stock. These subscriptions consisted of \$14.0 million in conversions of outstanding Series I Secured notes and \$10.6 million of new investments. We have used the proceeds from the sale of our Series A preferred stock, together with the origination fees we received to purchase and finance life insurance policies to fund our operational expenditures.

In June 2011, we registered a \$250.0 million debt offering of our Renewable Secured Debentures with the SEC, which registration became effective on January 31, 2012. Through June 30, 2014, the total amount of Renewable Secured Debentures sold, including renewals, is \$198.0 million. As of June 30, 2014, we had approximately \$161.0 million in principal amount of Renewable Secured Debentures outstanding.

Additionally, our wholly owned subsidiary GWG Life issued Series I Secured notes beginning in November 2009 on a private placement basis to accredited investors only. As of June 30, 2014, we had approximately \$28.6 million in principal amount of Series I Secured notes outstanding. This offering was closed in November 2011.

The weighted-average interest rate of our outstanding Series I Secured notes as of June 30, 2014 and December 31, 2013 was 8.36% and 8.35%, respectively, and the weighted-average maturity at those dates was 2.06 and 2.49 years, respectively. The
