QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the quarterly period ended March 30, 2008

OR

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____

**Commission File Number 0-19528
QUALCOMM Incorporated**

(Exact name of registrant as specified in its charter)

**Delaware
(State or other jurisdiction of
incorporation or organization)**

**95-3685934
(I.R.S. Employer
Identification No.)**

**5775 Morehouse Dr., San Diego, California
(Address of principal executive offices)**

**92121-1714
(Zip Code)**

(858) 587-1121

(Registrant's telephone number, including area code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding twelve months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past ninety days. Yes

No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of large accelerated filer, accelerated filer and smaller reporting company in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company

(Do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes No

Indicate the number of shares outstanding of each of the issuer's classes of common stock, as of the latest practicable date.

The number of shares outstanding of each of the issuer's classes of common stock, as of the close of business on April 21, 2008, were as follows:

Class	Number of Shares
Common Stock, \$0.0001 per share par value	1,618,689,983

QUALCOMM Incorporated
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

Note 1 Basis of Presentation

Financial Statement Preparation. The accompanying interim condensed consolidated financial statements have been prepared by QUALCOMM Incorporated (the Company or QUALCOMM), without audit, in accordance with the instructions to Form 10-Q and, therefore, do not necessarily include all information and footnotes necessary for a fair presentation of its consolidated financial position, results of operations and cash flows in accordance with accounting principles generally accepted in the United States. The condensed consolidated balance sheet at September 30, 2007 was derived from the audited financial statements at that date but may not include all disclosures required by accounting principles generally accepted in the United States. The Company operates and reports using a 52-53 week fiscal year ending on the last Sunday in September. The three-month and six-month periods ended March 30, 2008 included 13 weeks and 26 weeks, respectively. The three-month and six-month periods ended April 1, 2007 included 13 weeks and 27 weeks, respectively.

In the opinion of management, the unaudited financial information for the interim periods presented reflects all adjustments, which are only normal and recurring, necessary for a fair statement of results of operations, financial position and cash flows. These condensed consolidated financial statements should be read in conjunction with the consolidated financial statements included in the Company's Annual Report on Form 10-K for the fiscal year ended September 30, 2007. Operating results for interim periods are not necessarily indicative of operating results for an entire fiscal year.

The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the reported amounts and the disclosure of contingent amounts in the Company's financial statements and the accompanying notes. Actual results could differ from those estimates. Certain prior year amounts have been reclassified to conform to the current year presentation.

Principles of Consolidation. The Company's condensed consolidated financial statements include the assets, liabilities and operating results of majority-owned subsidiaries. The ownership of the other interest holders of consolidated subsidiaries is reflected as minority interest and is not significant. All significant intercompany accounts and transactions have been eliminated. Certain of the Company's foreign subsidiaries are included in the consolidated financial statements one month in arrears to facilitate the timely inclusion of such entities in the Company's condensed consolidated financial statements. The Company does not have any investments in entities it believes are variable interest entities for which the Company is the primary beneficiary.

Income Taxes. In June 2006, the Financial Accounting Standards Board (FASB) issued FASB Interpretation No. 48 (FIN 48), Accounting for Uncertainty in Income Taxes, which prescribes a recognition threshold and measurement process for recording in the financial statements uncertain tax positions taken or expected to be taken in a tax return. Additionally, FIN 48 provides guidance on the derecognition, classification, accounting in interim periods and disclosure requirements for uncertain tax positions. The accounting provisions of FIN 48 were effective for the Company beginning October 1, 2007. See Note 4 for additional information, including the effects of adoption on the Company's condensed consolidated financial statements.

Earnings Per Common Share. Basic earnings per common share is computed by dividing net income by the weighted-average number of common shares outstanding during the reporting period. Diluted earnings per common share is computed by dividing net income by the combination of dilutive common share equivalents, comprised of shares issuable under the Company's share-based compensation plans and shares subject to written put options, and the weighted-average number of common shares outstanding during the reporting period. Dilutive common share equivalents include the dilutive effect of in-the-money share equivalents, which is calculated based on the average share price for each period using the treasury stock method. Under the treasury stock method, the exercise price of an option, the amount of compensation cost, if any, for future service that the Company has not yet recognized, and the estimated tax benefits that would be recorded in paid-in capital, if any, when the option is exercised are assumed to be used to repurchase shares in the current period. The incremental dilutive common share equivalents, calculated using the treasury stock method, for the three months and six months ended March 30, 2008 were 26,447,000 and

27,453,000, respectively. The incremental dilutive common share equivalents, calculated using the treasury stock method, for the three months and six months ended April 1, 2007 were 33,519,000 and 32,897,000, respectively.

Table of Contents

QUALCOMM Incorporated
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

Employee stock options to purchase approximately 125,081,000 and 121,278,000 shares of common stock during the three months and six months ended March 30, 2008, respectively, and employee stock options to purchase approximately 92,463,000 and 98,304,000 shares of common stock during the three months and six months ended April 1, 2007, respectively, were outstanding but not included in the computation of diluted earnings per common share because the effect on diluted earnings per share would be anti-dilutive.

Comprehensive Income. Total comprehensive income consisted of the following (in millions):

	Three Months Ended		Six Months Ended	
	March 30, 2008	April 1, 2007	March 30, 2008	April 1, 2007

Table of Contents

QUALCOMM Incorporated
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

The Company recorded \$35 million and \$24 million in share-based compensation expense during the six months ended March 30, 2008 and April 1, 2007, respectively, related to share-based awards granted during those periods. In addition, for the six months ended March 30, 2008 and April 1, 2007, \$101 million and \$119 million, respectively, was reclassified to reduce net cash provided by operating activities with an offsetting increase in net cash provided by financing activities to reflect the incremental tax benefits from stock options exercised in those periods. At March 30, 2008, total unrecognized estimated compensation cost related to non-vested stock options granted prior to that date was \$1.5 billion, which is expected to be recognized over a weighted-average period of 3.5 years. Net stock options, after forfeitures and cancellations, granted during the six months ended March 30, 2008 and April 1, 2007 represented 1.5% and 1.1%, respectively, of outstanding shares as of the beginning of each fiscal period. Total stock options granted during the six months ended March 30, 2008 and April 1, 2007 represented 1.8% and 1.3%, respectively, of outstanding shares as of the end of each fiscal period.

Future Accounting Requirements. In September 2006, the FASB issued Statement No. 157 (FAS 157), *Fair Value Measurements*, which defines fair value, establishes a framework for measuring fair value, and expands disclosures about assets and liabilities measured at fair value in the financial statements. FAS 157 does not require any new fair value measurements, but applies to other accounting pronouncements that require or permit fair value measurements. In February 2007, the FASB issued Statement No. 159 (FAS 159), *The Fair Value Option for Financial Assets and Financial Liabilities Including an Amendment of FASB Statement No. 115*, which provides companies the irrevocable option to measure many financial assets and liabilities at fair value with the changes in fair value recognized in earnings resulting in an opportunity to mitigate volatility in earnings caused by measuring related assets and liabilities differently without having to apply complex hedge accounting provisions. The accounting provisions of FAS 157 and FAS 159 will be effective for the Company's fiscal 2009 beginning September 29, 2008. The Company is in the process of determining the effects, if any, the adoption of FAS 157 and FAS 159 will have on its consolidated financial statements.

In December 2007, the FASB revised Statement No. 141 (FAS 141R), *Business Combinations*, which establishes principles and requirements for how the acquirer in a business combination (i) recognizes and measures in its financial statements the identifiable assets acquired, the liabilities assumed and any noncontrolling interest in the acquiree, (ii) recognizes and measures the goodwill acquired in the business combination or a gain from a bargain purchase, and (iii) determines what information to disclose to enable users of the financial statements to evaluate the nature and financial effects of the business combination. FAS 141R will be effective for the Company's fiscal 2010 beginning September 28, 2009. The Company is in the process of determining the effects, if any, the adoption of FAS 141R will have on its consolidated financial statements.

	\$ 3,325	\$ 4,170	\$ 4,436	\$ 5,234

At March 30, 2008 and September 30, 2007, marketable securities included \$327 million and \$411 million, respectively, of securities that were loaned under the Company's securities lending program. At March 30, 2008 and September 30, 2007, unrealized gains on marketable securities were \$173 million and \$510 million, respectively, and unrealized losses were \$350 million and \$89 million, respectively. The unrealized losses on the Company's investments in marketable securities generally relate to market liquidity concerns that have depressed security values over the past several months. The Company considers these unrealized losses to be temporary.

At March 30, 2008, the Company classified its auction rate securities as noncurrent assets due to a disruption in credit markets that caused the auction mechanism to fail to set market-clearing rates and provide liquidity for sellers. However, a failed auction does not represent a default by the issuer of the underlying security. All of the Company's auction rate securities are rated AAA/Aaa, are collateralized by student loans substantially guaranteed by the U.S. government and continue to pay interest in accordance with their contractual terms. At March 30, 2008, the recorded values of the auction rate securities approximate their par values.

Property, Plant and Equipment.

	March 30, 2008	September 30, 2007
	(In millions)	
Land	\$ 124	\$ 124

Note 4 Income Taxes

The Company currently estimates its annual effective income tax rate to be approximately 16% for fiscal 2008, compared to the 9% effective income tax rate in fiscal 2007. The 15% effective tax rate recorded in the second quarter of fiscal 2008 was lower than the estimated annual effective tax rate for fiscal 2008 due to a change in the estimate of foreign earnings taxed at less than the United States federal tax rate. The estimated annual effective tax rate for fiscal 2008 is higher than the annual effective tax rate for fiscal 2007 primarily due to the impacts of prior year audits completed during fiscal 2007, the retroactive extension of the federal research and development tax credit during fiscal 2007 and the expiration of the federal research and development tax credit on December 31, 2007.

The estimated annual effective tax rate for fiscal 2008 is 19% lower than the United States federal statutory rate primarily due to benefits of approximately 23% related to foreign earnings taxed at less than the United States federal rate and 1% related to research and development tax credits, partially offset by state taxes of approximately 5%. The prior fiscal year rate was lower than the United States federal statutory rate primarily due to benefits related to foreign earnings taxed at less than the United States federal rate, the impact of tax audits completed during the year and the generation of research and development credits, partially offset by state taxes.

On October 1, 2007, the Company adopted FIN 48, which prescribes a comprehensive model for the financial statement recognition, measurement, classification and disclosure of uncertain tax positions. In the first step of the two-step process prescribed in the interpretation, the Company evaluates the tax position for recognition by determining if the weight of available evidence indicates that it is more likely than not that the position will be sustained on audit, including resolution of related appeals or litigation processes, if any. In the second step, the Company measures the tax benefit as the largest amount that is more than 50% likely of being realized upon settlement. As a result of the adoption, the Company increased its liabilities related to uncertain tax positions by \$2 million and accounted for the cumulative effect of this change as a decrease to retained earnings. The Company historically classified such liabilities as reductions to deferred tax assets or as current income taxes payable. Upon adoption, the Company reclassified \$174 million in unrecognized tax benefits for which the Company does not anticipate payment or receipt of cash within one year to noncurrent income taxes payable. The total amount of gross unrecognized tax benefits as of the date of adoption of FIN 48 was \$224 million, of which \$159 million would affect the effective tax rate if recognized.

The Company's policy of including interest and penalties related to income taxes, including unrecognized tax benefits, within the provision for income taxes did not change as a result of implementing FIN 48. As of the date of adoption, the amounts recognized in income tax expense and income taxes payable for interest and penalties relating to unrecognized tax benefits were nominal.

The Company files income tax returns in the U.S. federal jurisdiction and various state and foreign jurisdictions. As of October 1, 2007, the Company is no longer subject to U.S. federal examinations by taxing authorities for years prior to fiscal 2004. The Internal Revenue Service is currently conducting an examination of the Company's U.S. income tax returns for fiscal 2005 and 2006, which is anticipated to be completed by August 2009. The Company is subject to examination by the California Franchise Tax Board for fiscal 2003 through 2006. The

Table of Contents

QUALCOMM Incorporated
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

Company is also subject to income taxes in many state and local taxing jurisdictions in the U.S. and around the world, many of which are open to tax examinations for periods after fiscal 2002. Although the timing and ultimate resolution of audits is uncertain, the Company does not believe it is reasonably possible that the total amounts of unrecognized tax benefits will materially change in the next 12 months.

The Company has not provided United States income taxes nor foreign withholding taxes on a cumulative total of approximately \$5.7 billion of undistributed earnings of certain non-United States subsidiaries indefinitely invested outside the United States. Should the Company decide to repatriate foreign earnings, the Company would have to adjust the income tax provision in the period management determines that the earnings will no longer be indefinitely invested outside the United States.

The Company believes, more likely than not, that it will have sufficient taxable income after share-based related deductions to utilize the majority of its deferred tax assets. As of March 30, 2008, the Company has provided a valuation allowance of \$10 million related to previously incurred capital losses. This valuation allowance reflects the uncertainty surrounding the Company's ability to generate sufficient capital gains to utilize all capital losses. In addition, the Company has provided a valuation allowance of \$15 million related to foreign net operating loss carryforwards that are expected to expire unutilized. Deferred tax assets, net of valuation allowance, increased by approximately \$374 million from September 30, 2007 to March 30, 2008, primarily due to the adoption of FIN 48, changes in unrealized marketable securities gains and losses and tax benefits from share-based compensation expense, partially offset by the use of tax credits as a result of continued profitable operations.

Note 5 Stockholders Equity

Changes in stockholders' equity for the six months ended March 30, 2008 were as follows (in millions):

Balance at September 30, 2007	\$ 15,835
Net income	1,533
Other comprehensive loss	(352)
Repurchase of common stock	(1,666)
Net proceeds from the issuance of common stock	229
Share-based compensation	256
Tax benefits from exercise of stock options	94
Dividends	(455)
Other	3
Balance at March 30, 2008	\$ 15,477

Stock Repurchase Program. On March 11, 2008, the Company announced that it had been authorized to repurchase up to \$2.0 billion of the Company's common stock. The \$2.0 billion stock repurchase program replaced a \$3.0 billion stock repurchase program, of which approximately \$2 million remained authorized for repurchases. The stock repurchase program has no expiration date. In connection with the Company's stock repurchase program, the Company sold put options on its own stock during fiscal 2007, which were exercised during the six months ended March 30, 2008 requiring the Company to repurchase and retire 5,000,000 shares of its common stock for approximately \$189 million (net of the put option premiums received). During the three months and six months ended March 30, 2008, the Company repurchased and retired 20,227,000 and 42,616,000 shares, respectively, of the Company's common stock for \$762 million and \$1.7 billion, respectively (net of the premiums received related to the put options that were exercised). While the Company has not made any repurchases under the \$2.0 billion stock repurchase program, the Company continues to evaluate repurchases under this program.

Dividends. On March 11, 2008, the Company announced an increase in its quarterly dividend effective for dividends payable after March 28, 2008 from \$0.14 to \$0.16 per share of common stock. On April 10, 2008, the

Company announced a cash dividend of \$0.16 per share on the Company's common stock, payable on June 27, 2008 to stockholders of record as of May 30, 2008. Cash dividends announced in the six months ended March 30, 2008 and April 1, 2007 were as follows (in millions, except per share data):

Note 6 Commitments and Contingencies

Litigation. Broadcom Corporation v. QUALCOMM Incorporated: On May 18, 2005, Broadcom filed two actions in the United States District Court for the Central District of California against the Company alleging infringement of ten patents and seeking monetary damages and injunctive relief based thereon. On the same date, Broadcom also filed a complaint in the United States International Trade Commission (ITC) alleging infringement of five of the same patents at issue in the Central District Court cases seeking a determination and relief under Section 337 of the Tariff Act of 1930. On July 1, 2005, Broadcom filed an action in the United States District Court for the District of New Jersey against the Company alleging violations of state and federal antitrust and unfair competition laws as well as common law claims, generally relating to licensing and chip sales activities, seeking monetary damages and injunctive relief based thereon. On September 1, 2006, the New Jersey District Court dismissed the complaint; Broadcom appealed. On September 4, 2007, the Court of Appeals for the Third Circuit reinstated two of the eight federal claims and five pendant state claims in Broadcom's complaint and affirmed the dismissal of the remaining counts. On November 2, 2007, Broadcom filed an amended complaint in the New Jersey case, adding the allegations from a state court case in California that had been stayed, as discussed below, and a federal antitrust claim based on the California allegations. Two of the Broadcom patent claims filed in the other Central District patent action (which is stayed pending completion of the ITC action) have been dismissed by agreement of the parties. A trial relating to three Broadcom patents was held in May 2007 in one of the Central District Court actions, and on May 29, 2007, the jury rendered a verdict finding willful infringement of the three patents and awarding past damages in the approximate amount of \$20 million. The final judgment, including damages calculations through May 29, 2007 and pre-judgment interest, was approximately \$25 million, which has been secured by an irrevocable letter of credit and expensed pending appeals. On December 31, 2007, the court issued an order enjoining the Company from making, using, selling, shipping, supporting or marketing products that were found to infringe on Broadcom's patents, subject to a specified limited license through January 2009 on two of the three patents and with respect to the third patent, a limited license as to one set of products. Certain terms were modified in a Second Amended and Restated Permanent Injunction issued by the court on March 11, 2008. The immediately enjoined products are those WCDMA products that relate to patent number 6,847,686 (the '686 patent). With respect to EV-DO products involving the '686 patent (as well as products relating to the two remaining patents), the judge's order provides for a permanent injunction but stays the effect of that injunction until January 31, 2009 with respect to companies that purchased these enjoined products as of May 29, 2007. The stay is subject to certain conditions, including the Company's payment of ongoing royalties. The Company has filed an appeal with the Court of Appeals for the Federal Circuit. The appeals court issued an order expediting the briefing schedule and setting the oral argument date in July 2008.

On February 14, 2006, an ITC hearing also commenced as to three patents alleged by Broadcom to be infringed by the Company. On October 10, 2006, the Administrative Law Judge (ALJ) issued an initial determination in which he recommended against any downstream remedies and found no infringement by the Company on two of the three remaining patents and most of the asserted claims of the third patent. The ALJ did find infringement on some claims of one patent. The ALJ did not recommend excluding chips accused by Broadcom but, instead, recommended a limited exclusion order directed only to chips that are already programmed with a specific software module and

recommended a related cease and desist order. The Commission adopted the ALJ's initial determination on violation and, on June 7, 2007, issued a cease and desist order and an exclusion order directed at chips programmed with specific software and certain downstream products first imported after the date of the exclusion order. The Federal Circuit has issued stays of the exclusion order with respect to the downstream products of all of the Company's customers that requested the stay. The Company is appealing both the infringement finding and the cease and desist order and the exclusion order to the United States Court of Appeal for the Federal Circuit, and Broadcom is appealing certain rulings of the ALJ. Briefing has been completed, and the parties are awaiting an oral argument date. On November 9, 2007, Broadcom filed an enforcement complaint in the ITC, alleging violations of the ITC's cease and desist order by the Company. The ITC instituted formal enforcement proceedings and referred

Table of Contents

QUALCOMM Incorporated
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

the matter to the original ALJ who has scheduled a hearing on the matter commencing on April 22, 2008. The target date for completion of the investigation is November 28, 2008. On April 13, 2007, Broadcom filed a new complaint in California state court against the Company alleging unfair competition, breach of contract and fraud, and seeking injunctive and monetary relief. On October 5, 2007, the court ordered the case stayed pending resolution of the New Jersey case, referenced above.

QUALCOMM Incorporated v. Broadcom Corporation: On October 14, 2005, the Company filed an action in the United States District Court for the Southern District of California against Broadcom alleging infringement of two patents, each of which relates to video encoding and decoding for high-end multimedia processing, and seeking monetary damages and injunctive relief based thereon. In January 2007, a jury rendered a verdict finding the patents valid but not infringed. In a subsequent ruling, the trial judge held that the Company was not guilty of inequitable conduct before the United States Patent and Trademark Office (USPTO), but the Company's actions in a video-encoding standards development organization amounted to a waiver of the right to enforce the patents under any circumstances. The Court also ordered the Company to pay Broadcom's attorneys' fees and costs for the case. The Company and Broadcom each filed notices of appeal, but Broadcom subsequently dismissed its appeal. The briefing to the Court of Appeals for the Federal Circuit was completed on April 14, 2008. On January 7, 2008, the Magistrate Judge considering Broadcom's motions for sanctions against the Company for discovery violations issued an order sanctioning the Company and eight of its retained outside attorneys for those discovery violations. The Magistrate Judge referred the eight outside attorneys to the California State Bar for an investigation into possible ethics violations and ordered the Company to participate in a process to create a model discovery protocol. The Magistrate Judge reaffirmed the District Court's previous award of Broadcom's attorneys' fees. On March 5, 2008, the District Court vacated the portion of the Magistrate Judge's order only as it relates to the sanctions imposed on the Company's outside counsel and remanded the case to the Magistrate Judge for further proceedings on those issues.

Actions by the Company and its subsidiaries against Nokia Corporation and/or Nokia Inc.: On November 4, 2005, the Company, along with its wholly-owned subsidiary, SnapTrack, filed an action in the United States District Court for the Southern District of California against Nokia alleging infringement of eleven QUALCOMM patents and one SnapTrack patent relating to GSM/GPRS/EDGE and position location and seeking monetary damages and injunctive relief. The case has been stayed pending resolution of the ITC case referred to below. On May 24, 2006, the Company filed an action in the Chancery Division of the High Court of Justice for England and Wales against Nokia alleging infringement of two QUALCOMM patents relating to GSM/GPRS/EDGE, seeking monetary damages and injunctive relief. On March 3, 2008, the U.K. court ruled that the patents were infringed, but invalid based on prior art. On June 9, 2006, the Company filed a complaint with the ITC against Nokia alleging importation of products that infringe six QUALCOMM patents relating to power control, video encoding and decoding, and power conservation mode technologies and seeking an exclusionary order and a cease and desist order. On July 7, 2006, the ITC commenced an investigation, and the Company subsequently withdrew three of the patents from the proceedings. The trial was completed in September 2007, and the ITC ALJ issued an Initial Determination on December 12, 2007 of no violation by Nokia, and on February 27, 2008 the Commission issued a Final Determination declining to review the ALJ's Initial Determination. The deadline for filing a notice of appeal to the Court of Appeals for the Federal Circuit is April 25, 2008.

In 2006, the Company filed actions against Nokia in the District Court of Dusseldorf, Federal Republic of Germany, the High Court of Paris, France, the Milan Court, Italy and the People's Republic of China, alleging infringement of patents relating to GSM/GPRS/EDGE, seeking monetary damages and seeking injunctive relief. Those cases, along with the Texas case described below, were stayed pursuant to agreement of the parties, pending resolution of the first phase of issues in the Delaware case, also described below. On April 2, 2007, the Company filed suit against Nokia in the Eastern District of Texas, Marshall Division for infringement of three patents and in the Western District of Wisconsin for infringement of two patents. These cases are directed to Nokia GSM/GPRS/EDGE cellular phones. In response, Nokia filed counterclaims alleging infringement by the Company of six Nokia patents,

two of which Nokia also asserted against the Company's subsidiary, MediaFLO USA, Inc. Petitions have been filed with the USPTO seeking reexamination of the three patents at issue in the Texas case. In response, the USPTO has initiated reexamination proceedings but to date has not issued any office actions. On July 11, 2007, the Wisconsin Court issued an order transferring that case to the United States District Court for the Southern District of California, and the parties have consolidated the matter with the San Diego matter referenced

Table of Contents

QUALCOMM Incorporated
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

above and stipulated to a stay of the proceedings pending final resolution of the ITC matter referenced above. On April 5, 2007, the Company filed an arbitration demand with the American Arbitration Association requesting a ruling that, among other things, Nokia's continued use of the Company's patents in Nokia's CDMA cellular devices (including WCDMA) after April 9, 2007 constitutes an election by Nokia to extend its license under the parties' existing agreement. On July 9, 2007, the Company filed an amended demand for arbitration, alleging that Nokia's institution of certain patent infringement proceedings against the Company was a material breach of the license agreement between the parties. The arbitration matter has been transferred by agreement of the parties and consolidated with the case described below pending in Delaware Chancery Court.

Nokia Corporation and Nokia Inc. v. QUALCOMM Incorporated: On August 9, 2006, Nokia Corporation and Nokia Inc. filed a complaint in Delaware Chancery Court seeking declaratory and injunctive relief relating to alleged commitments made by the Company to wireless industry standards setting organizations. On April 12, 2007 and June 5, 2007, the Company filed counterclaims seeking declarations that, among other things, the Company's 2001 license agreement with Nokia fulfilled and/or superseded any ostensible obligations to offer or grant patent licenses to Nokia allegedly arising from the Company's participation in certain standards setting organizations. At the Court's suggestion, the parties stipulated to consolidate the arbitration matter filed by the Company referenced above into the Delaware case. The Court ordered the case to be tried in two phases, with trial of the first phase to commence in July 2008. In March 2007, Nokia filed actions in Germany and the Netherlands alleging that certain of the Company's patents are exhausted with regard to Nokia's products placed on the European market that contain chipsets supplied to Nokia by Texas Instruments. On October 23, 2007, the German court dismissed Nokia's claims. On November 14, 2007, the Dutch court dismissed Nokia's claims. Nokia did not appeal either decision, and its time for appeal has lapsed. On August 16, 2007, Nokia Corporation and Nokia Inc. filed a complaint with the ITC alleging importation of products that infringe five Nokia patents and seeking an exclusionary order and a cease and desist order. The ITC instituted an investigation on September 17, 2007. The Company filed a motion to terminate the investigation pending resolution of the arbitration proceeding instituted by the Company on April 5, 2007. On October 18, 2007, the ALJ issued an order recommending the Company's motion be granted. On November 21, 2007, the ITC announced that it would not review the ALJ's determination, thus rendering that determination final.

European Commission Complaint: On October 28, 2005, it was reported that six companies (Broadcom, Nokia, Texas Instruments, NEC, Panasonic and Ericsson) filed complaints with the European Commission, alleging that the Company violated European Union competition law in its WCDMA licensing practices. The Company has received the complaints and has submitted replies to the allegations, as well as documents and other information requested by the European Commission. On October 1, 2007, the European Commission announced that it was initiating a proceeding, though it has not decided to issue a Statement of Objections, and it has not made any conclusions as to the merits of the complaints.

Tessera, Inc. v. QUALCOMM Incorporated: On April 17, 2007, Tessera, Inc. filed a patent infringement lawsuit in the United States District Court for the Eastern Division of Texas and a complaint with the ITC pursuant to Section 337 of the Tariff Act of 1930 against the Company and other companies, alleging infringement of two patents relating to semiconductor packaging structures and seeking monetary damages and injunctive and other relief based hereon. The District Court suit for damages is stayed pending resolution of the ITC proceeding. The ITC instituted the investigation on May 15, 2007. The patents at issue are being reexamined by the USPTO based on petitions filed by a third-party. The USPTO's Central Reexamination Unit has issued office actions rejecting all of the asserted patent claims on the grounds that they are invalid in view of certain prior art. Tessera is contesting these rejections, and the USPTO has not made a final decision. On February 26, 2008, the ALJ stayed the ITC proceedings pending completion of the USPTO's reexamination proceedings. On March 27, 2008, the Commission reversed the ALJ's order and ordered the ITC proceeding to be reinstated. A new hearing date has not yet been scheduled.

In April 2008, two complaints were filed on behalf of purported classes of individuals who purchased UMTS devices or service, seeking damages and injunctive relief under federal and/or state antitrust and unfair competition

laws as a result of the Company's licensing and sales practices. The Company has not yet responded to the complaints.

Other: The Company has been named, along with many other manufacturers of wireless phones, wireless operators and industry-related organizations, as a defendant in purported class action lawsuits, and individually filed

Table of Contents

QUALCOMM Incorporated
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

actions pending in Pennsylvania and Washington D.C., seeking monetary damages arising out of its sale of cellular phones. The courts that have reviewed similar claims against other companies to date have held that there was insufficient scientific basis for the plaintiffs' claims in those cases.

It has been reported that two U.S. companies (Texas Instruments and Broadcom) and two South Korean companies (Nextreaming Corp. and Thin Multimedia, Inc.) have filed complaints with the Korea Fair Trade Commission alleging that the Company's business practices are, in some way, a violation of South Korean anti-trust regulations. To date, the Company has not received the complaints but has submitted certain requested information and documents to the Korea Fair Trade Commission.

The Japan Fair Trade Commission has also received unspecified complaints alleging the Company's business practices are, in some way, a violation of Japanese law. The Company has not received the complaints but has submitted certain requested information and documents to the Japan Fair Trade Commission.

Although there can be no assurance that unfavorable outcomes in any of the foregoing matters would not have a material adverse effect on the Company's operating results, liquidity or financial position, the Company believes the claims made by other parties are without merit and will vigorously defend the actions. Other than amounts relating to the *Broadcom Corporation v. QUALCOMM Incorporated* and *QUALCOMM Incorporated v. Broadcom Corporation* matters, the Company has not recorded any accrual for contingent liabilities associated with the other legal proceedings described above, based on the Company's belief that additional liabilities, while possible, are not probable. Further, any possible range of loss cannot be estimated at this time. The Company is engaged in numerous other legal actions arising in the ordinary course of its business and believes that the ultimate outcome of these actions will not have a material adverse effect on its operating results, liquidity or financial position.

Purchase Obligations. The Company has agreements with suppliers and other parties to purchase inventory, other goods and services and long-lived assets. Noncancelable obligations under these agreements as of March 30, 2008 for the remainder of fiscal 2008 and for each of the subsequent four years from fiscal 2009 through 2012 were approximately \$896 million, \$141 million, \$103 million, \$46 million and \$32 million, respectively, and \$8 million thereafter. Of these amounts, for the remainder of fiscal 2008 and for fiscal 2009, commitments to purchase integrated circuit product inventories comprised \$702 million and \$31 million, respectively.

Leases. The Company leases certain of its facilities and equipment under noncancelable operating leases, with terms ranging from less than one year to 30 years and with provisions in certain leases for cost-of-living increases. The Company leases certain property under capital lease agreements that expire at various dates through 2039. Capital lease obligations are included in other liabilities. The future minimum lease payments for all capital leases and operating leases as of March 30, 2008 were as follows (in millions):

	Capital Leases	Operating Leases	Total
Remainder of fiscal 2008	\$ 3	\$ 40	\$ 43
2009	7	70	77
2010	7	57	64
2011	7	41	48
2012	7	35	42
Thereafter	201	192	393
Total minimum lease payments	\$ 232	\$ 435	\$ 667
Deduct: Amounts representing interest	(127)		
Present value of minimum lease payments	105		

Deduct: Current portion of capital lease obligations

Long-term portion of capital lease obligations \$ 105

Note 7 Segment Information

The Company is organized on the basis of products and services. The Company aggregates four of its divisions into the Qualcomm Wireless & Internet segment. Reportable segments are as follows:

15

Table of Contents

QUALCOMM Incorporated
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

Qualcomm CDMA Technologies (QCT) develops and supplies integrated circuits and system software for wireless voice and data communications, multimedia functions and global positioning system products based on our CDMA technology and other technologies;

Qualcomm Technology Licensing (QTL) grants licenses to use portions of the Company's intellectual property portfolio, which includes certain patent rights essential to and/or useful in the manufacture and sale of certain wireless products, including, without limitation, products implementing cdmaOne, CDMA2000, WCDMA, CDMA TDD and/or OFDMA standards and their derivatives, and collects license fees and royalties in partial consideration for such licenses;

Qualcomm Wireless & Internet (QWI) comprised of:

- o Qualcomm Internet Services (QIS) provides technology to support and accelerate the convergence of the wireless data market, including its BREW and QChat products and services;
- o Qualcomm Government Technologies (QGOV) provides development, hardware and analytical expertise to United States government agencies involving wireless communications technologies; and
- o Qualcomm Enterprise Services (QES) provides satellite and terrestrial-based two-way data messaging, position reporting and wireless application services to transportation companies, private fleets, construction equipment fleets and other enterprise companies. QES also sells products that operate on the Globalstar low-Earth-orbit satellite-based telecommunications system and provides related services.
- o Firethorn builds and manages software applications that enable financial institutions and wireless operators to offer mobile commerce capabilities.

Qualcomm Strategic Initiatives (QSI) manages the Company's strategic investment activities, including MediaFLO USA, Inc. (MediaFLO USA), the Company's wholly-owned wireless multimedia operator subsidiary. QSI also makes strategic investments to promote the worldwide adoption of CDMA-based products and services.

The Company evaluates the performance of its segments based on earnings (loss) before income taxes (EBT). EBT includes the allocation of certain corporate expenses to the segments, including depreciation and amortization expense related to unallocated corporate assets. Certain income and charges are not allocated to segments in the Company's management reports because they are not considered in evaluating the segments' operating performance. The table below presents revenues and EBT for reportable segments (in millions):

	QCT	QTL	QWI	QSI	Reconciling Items	Total
For the three months ended:						
March 30, 2008						
Revenues	\$ 1,620	\$ 795	\$ 194	\$ 2	\$ (5)	\$ 2,606

During the three months and six months ended March 30, 2008, unallocated research and development expenses included \$60 million and \$117 million, respectively, and unallocated selling, general and administrative expenses included \$61 million and \$119 million, respectively, of share-based compensation expense. During the three months and six months ended April 1, 2007, unallocated research and development expenses included \$58 million and \$115 million, respectively, and unallocated selling, general and administrative expenses included \$59 million and \$121 million, respectively, of share-based compensation expense. Unallocated cost of equipment and services revenues was comprised entirely of share-based compensation expense.

Revenues from external customers and intersegment revenues were as follows (in millions):

	QCT	QTL	QWI	QSI
For the three months ended:				
March 30, 2008				
Revenues from external customers	\$1,618	\$ 794	\$192	\$2
Intersegment revenues	2	1	2	
April 1, 2007				
Revenues from external customers	\$1,257	\$ 758	\$197	\$

For the six months ended:				
March 30, 2008				
Revenues from external customers	\$3,190	\$1,444	\$401	\$4
Intersegment revenues	4	1	4	
April 1, 2007				
Revenues from external customers	\$2,482	\$1,358	\$384	\$

Intersegment revenues	8	1	3
-----------------------	---	---	---

Intersegment revenues are based on prevailing market rates for substantially similar products and services or an approximation thereof, and the purchasing segment records the cost of revenues (or inventory write-downs) at the selling segment's original cost. The elimination of the selling segment's gross margin is included with other intersegment eliminations in reconciling items.

Segment assets are comprised of accounts receivable and inventories for QCT, QTL and QWI. The QSI segment assets include certain marketable securities, notes receivable, wireless licenses, other investments and all assets of QSI's consolidated subsidiary, MediaFLO USA, including property, plant and equipment. QSI's assets related to the MediaFLO USA business totaled \$508 million and \$457 million at March 30, 2008 and

Table of Contents

QUALCOMM Incorporated
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

September 30, 2007, respectively. Reconciling items for total assets included \$212 million and \$215 million at March 30, 2008 and September 30, 2007, respectively, of goodwill and other assets related to the Qualcomm MEMS Technologies division, a nonreportable segment developing display technology for mobile devices and other applications. Total segment assets differ from total assets on a consolidated basis as a result of unallocated corporate assets primarily comprised of cash, cash equivalents, certain marketable securities, property, plant and equipment, deferred tax assets, goodwill and certain intangible and other assets of nonreportable segments. Segment assets and reconciling items were as follows (in millions):

	March 30, 2008	September 30, 2007
QCT	\$ 1,079	\$ 921
QTL	16	29
QWI	205	200
QSI	891	896
Reconciling items	15,961	16,449
Total consolidated assets	\$ 18,152	\$ 18,495

Note 8 Acquisitions

During the six months ended March 30, 2008, the Company acquired five businesses for total cash consideration of \$262 million. Approximately \$3 million in consideration payable in cash through June 2009 was held back as security for certain indemnification obligations. The Company is in the process of finalizing the accounting for the acquisitions and does not anticipate material adjustments to the preliminary purchase price allocations. Goodwill recognized in these transactions amounted to \$202 million, of which \$26 million is expected to be deductible for tax purposes. Technology-based intangible assets recognized in the amount of \$57 million are being amortized on a straight-line basis over a weighted-average amortization period of 6 years. The condensed consolidated financial statements include the operating results of these businesses from their respective dates of acquisition. Pro forma results of operations have not been presented because the effects of the acquisitions were not material.

Table of Contents

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

This information should be read in conjunction with the condensed consolidated financial statements and the notes thereto included in Item 1 of Part I of this Quarterly Report and the audited consolidated financial statements and notes thereto and Management's Discussion and Analysis of Financial Condition and Results of Operations for the year ended September 30, 2007 contained in our 2007 Annual Report on Form 10-K.

In addition to historical information, the following discussion contains forward-looking statements that are subject to risks and uncertainties. Actual results may differ substantially from those referred to herein due to a number of factors, including but not limited to risks described in the section entitled Risk Factors and elsewhere in this Quarterly Report.

Overview

Recent Developments

Revenues for the second quarter of fiscal 2008 were \$2.6 billion, with net income of \$766 million. The following recent developments occurred with respect to key elements of our business or our industry during the second quarter of fiscal 2008:

Worldwide wireless subscribers grew by approximately 4% to reach approximately 3.5 billion.⁽¹⁾

CDMA subscribers, including both 2G (cdmaOne) and 3G (CDMA2000 1X, 1xEV-DO and WCDMA), are approximately 18% of total worldwide wireless subscribers to date.⁽¹⁾

3G subscribers (all CDMA-based) grew to approximately 625 million worldwide by March 30, 2008, including approximately 400 million CDMA2000 1X/1xEV-DO subscribers and approximately 225 million WCDMA/HSPA subscribers.⁽¹⁾

CDMA-based device shipments continue to grow at a strong pace. We estimate approximately 112 million units shipped during the fourth calendar quarter, an increase of 27% over the 88 million units shipped in the year ago quarter.⁽²⁾⁽⁴⁾

In the handset market, CDMA-based unit shipments grew 26% year-over-year, compared to 12% year-over-year growth across all technologies.⁽³⁾

The average selling price of CDMA-based devices was estimated to be approximately \$222, up 4% from the year ago quarter.⁽²⁾⁽⁴⁾

We shipped approximately 85 million Mobile Station Modem (MSM) integrated circuits for CDMA-based wireless devices and data modules, an increase of 39%, compared to approximately 61 million MSM integrated circuits in the year ago quarter.

In late 2004, we discovered that Ericsson and Sony Ericsson were underreporting and underpaying royalties to us for sales of subscriber units under the license agreement between Ericsson and us. In March 2008, the parties resolved the dispute as to both past and future sales. As part of the settlement, the parties have dismissed the arbitration addressing this dispute.

During the second quarter of fiscal 2008, we entered into an agreement with Nokia Corp. to consolidate the arbitration we had filed against Nokia into the pre-existing litigation in Delaware originally filed by Nokia. That case now addresses, among other things, our dispute with Nokia regarding Nokia's obligation to pay royalties for the use of certain of our patents. As a result of the dispute, under generally accepted accounting principles, we are not recording royalty revenue attributable to Nokia's sales after April 9, 2007 until a court awards damages or the disputes are otherwise resolved by agreement, resulting in a negative impact on

royalty revenues reported by our QTL segment. We expect legal activity in this area to remain high through 2009.

We continue to be engaged in litigation with Broadcom Corporation in various forums. On December 31, 2007, the Federal District Court in Santa Ana, California issued an injunction as to certain of our products, while enjoining but mandating a limited license with respect to other products. We continue the effort to design products to avoid the claims of the patents found by the jury to infringe Broadcom's patents. We have introduced chipsets ready for commercial-production devices that do not include the accused function of the 6,847,686 patent. We are appealing the adverse finding in this case on an expedited schedule.

Table of Contents

- (1) According to Wireless Intelligence, an independent source of wireless operator data.
- (2) Second quarter of fiscal 2008 information was derived from reports provided by our licensees/manufacturers during the quarter and our own estimates of unreported activity. Second quarter of fiscal 2007 information was derived from reports provided by our licensees/manufacturers during the quarter.
- (3) Based on current reports by Strategy Analytics, a global research and consulting firm, in their Global Handset Market Share Updates.
- (4) We perform periodic audits of the royalties payable by our licensees. As a result of our audit process, we determined during the fourth quarter of fiscal 2007 that total CDMA-based device shipments and average selling prices (ASPs) should be adjusted for certain periods. Historical units and ASPs for the second quarter of fiscal 2007 have been revised to reflect these adjustments. The adjustments related only to device shipments and ASPs and did not impact

the amount or timing of our revenues.

Our Business and Operating Segments

We design, manufacture, have manufactured on our behalf and market digital wireless telecommunications products and services based on our CDMA technology and other technologies. We derive revenues principally from sales of integrated circuit products, from license fees and royalties for use of our intellectual property, from services and related hardware sales and from software development and licensing and related services. Operating expenses primarily consist of cost of equipment and services, research and development and selling, general and administrative expenses.

We conduct business primarily through four reportable segments. These segments are: Qualcomm CDMA Technologies, or QCT; Qualcomm Technology Licensing, or QTL; Qualcomm Wireless & Internet, or QWI; and Qualcomm Strategic Initiatives, or QSI.

QCT is a leading developer and supplier of CDMA-based integrated circuits and system software for wireless voice and data communications, multimedia functions and global positioning system products. QCT's integrated circuit products and system software are used in wireless devices, particularly mobile phones, data cards and infrastructure equipment. The integrated circuits for wireless devices include the Mobile Station Modem (MSM), Radio Frequency (RF) and Power Management (PM) devices. These integrated circuits for wireless devices and system software perform voice and data communication, multimedia and global positioning functions, radio conversion between RF and baseband signals and power management. QCT's system software enables the other device components to interface with the integrated circuit products and is the foundation software enabling phone manufacturers to develop devices utilizing the functionality within the integrated circuits. The infrastructure equipment integrated circuits and system software perform the core baseband CDMA modem functionality in the wireless operator's base station equipment. In addition to the key components in a wireless system, QCT provides system reference designs and development tools to assist in customizing wireless devices and user interfaces, to integrate our products with components developed by others, and to test interoperability with existing and planned networks. QCT revenues comprised 62% and 57% of total consolidated revenues in the second quarter of fiscal 2008 and 2007, respectively, and 63% and 59% of total consolidated revenues for the first six months of fiscal 2008 and 2007, respectively.

QCT utilizes a fabless production business model, which means that we do not own or operate foundries for the production of silicon wafers from which our integrated circuits are made. We rely on independent third-party suppliers to perform the manufacturing and assembly, and most of the testing, of our integrated circuits. Our suppliers are also responsible for the procurement of most of the raw materials used in the production of our integrated circuits. We employ both turnkey and two-stage manufacturing business models to purchase our integrated circuits. Turnkey is when our foundry suppliers are responsible for delivering fully assembled and tested integrated circuits. Under the two-stage manufacturing business model, we purchase completed die directly from semiconductor manufacturing foundries and contract directly with third-party manufacturers for back-end assembly and test services. We refer to this two-stage manufacturing business model as Integrated Fabless Manufacturing (IFM).

QTL grants licenses to use portions of our intellectual property portfolio, which includes certain patent rights essential to and/or useful in the manufacture and sale of certain wireless products, including, without limitation, products implementing cdmaOne, CDMA2000, WCDMA, CDMA TDD, GPRS/EDGE and/or OFDMA standards and their derivatives. QTL receives license fees as well as ongoing royalties based on worldwide sales by licensees

Table of Contents

of products incorporating or using our intellectual property. License fees are fixed amounts paid in one or more installments. Ongoing royalties are generally based upon a percentage of the wholesale selling price of licensed products, net of certain permissible deductions (e.g. certain shipping costs, packing costs, VAT, etc.). QTL revenues comprised 31% and 34% of total consolidated revenues in the second quarter of fiscal 2008 and 2007, respectively, and 29% and 32% of total consolidated revenues for the first six months of fiscal 2008 and 2007, respectively. The vast majority of such revenues have been generated through our licensees' sales of cdmaOne, CDMA2000 and WCDMA products.

QWI, which includes Qualcomm Enterprise Services (QES), Qualcomm Internet Services (QIS), Qualcomm Government Technologies (QGOV) and Firethorn, generates revenues primarily through mobile communication products and services, software and software development aimed at support and delivery of wireless applications. QES sells equipment, software and services used by transportation and other companies to connect wirelessly with their assets, products and workforce. QES also sells products that operate on the Globalstar low-Earth-orbit satellite-based telecommunications system and provides related services. Through March 2008, QES has shipped approximately 1,247,000 terrestrial-based and satellite-based communications systems. QIS provides BREW-based (Binary Runtime Environment for Wireless) products that include user interface and content delivery and management products and services for the wireless industry. QIS also provides QChat, which enables virtually instantaneous push-to-talk functionality on CDMA-based wireless devices. The QGOV division provides development, hardware and analytical expertise involving wireless communications technologies to United States government agencies. Firethorn builds and manages software applications that enable financial institutions and wireless operators to offer mobile commerce capabilities. QWI revenues comprised 7% and 9% of total consolidated revenues in the second quarter of fiscal 2008 and 2007, respectively, and 8% and 9% of total consolidated revenues for the first six months of fiscal 2008 and 2007, respectively.

QSI manages the Company's strategic investment activities, including MediaFLO USA, Inc. (MediaFLO USA), the Company's wholly-owned wireless multimedia operator subsidiary. QSI also makes strategic investments to promote the worldwide adoption of CDMA-based products and services. Our strategy is to invest in CDMA-based operators, licensed device manufacturers and start-up companies that we believe open new markets for CDMA technology, support the design and introduction of new CDMA-based products or possess unique capabilities or technology. Our MediaFLO USA subsidiary offers services over our nationwide multicasting network based on our MediaFLO Media Distribution System (MDS) and FLO technology. This network is utilized as a shared resource for wireless operators and their customers in the United States. The commercial availability of the MediaFLO USA network and service to retail wireless consumers will continue to be determined by our wireless operator partners. MediaFLO USA's network uses the 700 MHz spectrum for which we hold licenses nationwide. Additionally, MediaFLO USA has and will continue to procure, aggregate and distribute content in service packages which we will make available on a wholesale basis to our wireless operator customers (whether they operate on CDMA or GSM/WCDMA networks) in the United States. Distribution, marketing, billing and customer relationships remain functions that are provided by our wireless operator partners. As part of our strategic investment activities, we intend to pursue various exit strategies at some point in the future, which may include distribution of our ownership interest in MediaFLO USA to our stockholders in a spin-off transaction.

Nonreportable segments include: the Qualcomm MEMS Technologies division, which is developing an interferometric modulator (IMOD) display technology based on micro-electro-mechanical-system (MEMS) structure combined with thin film optics; the Qualcomm Flarion Technologies division, which is developing OFDM/OFDMA technologies; the MediaFLO Technologies division, which is developing our MediaFLO MDS and FLO technology and markets MediaFLO for deployment outside of the United States; and other product initiatives.

Looking Forward

The deployment of 3G networks (CDMA2000 and WCDMA) enables higher voice capacity and data rates, thereby supporting more minutes of use and data intensive applications like multimedia. As a result, we expect continued growth in demand for 3G products and services around the world. As we look forward to the next several months, the following items are likely to have an impact on our business:

The deployment and upgrading of CDMA2000 networks is expected to continue.

- o More than 255 operators have launched CDMA2000 1X;⁽¹⁾
- o More than 95 operators have deployed the higher data speeds of 1xEV-DO and more than 30 operators have deployed, and several more are preparing to deploy EV-DO Revision A.⁽¹⁾

Table of Contents

GSM operators are expected to continue transitioning to WCDMA networks.

- o More than 210 GSM operators have migrated their networks to WCDMA; ⁽²⁾
- o More than 180 operators have launched commercial HSDPA networks, and more than 30 operators have launched commercial HSUPA networks. ⁽²⁾

We expect WCDMA device prices will continue to segment into high and low end due to high volumes and vibrant competition in marketplaces around the world. As more operators deploy the higher data speeds of HSPA, we expect consumer demand for advanced 3G devices to accelerate.

To meet growing demand for advanced 3G wireless devices and increased multimedia MSM functionality, we intend to continue to invest significant resources toward the development of multimedia products, software and services for the wireless industry. However, we expect that a considerable portion of our research and development initiatives in fiscal 2008 will not reach commercialization until several years in the future.

We expect demand for low-end wireless devices to continue to grow and have developed a family of Qualcomm Single Chip (QSC) products, which integrate the baseband, radio frequency and power management functions into one chip, lowering component counts and enabling faster time-to-market for our customers. While we continue to invest resources aggressively to expand our QSC product family to address the low-end market more effectively with CDMA-based products, we still face significant competition from GSM-based products, particularly in emerging markets.

We will continue to invest in the evolution of CDMA and a broad range of other technologies as part of our vision to enable a range of technologies, each optimized for specific services, including the following products and technologies:

- o The continued evolution of CDMA-based technologies, including the long-term roadmaps of 1xEV-DO and High Speed Packet Access (HSPA);
- o OFDM- and OFDMA-based technologies;
- o Our BREW applications platform, content delivery services and user interfaces;
- o Our MediaFLO MDS and FLO technology for delivery of multimedia content; and
- o Our IMOD display technology.

In addition to the foregoing business and market-based matters, the following items are likely to have an impact on our business and results of operations over the next several months:

We expect that we will continue to be involved in litigation, including our ongoing disputes with Broadcom and Nokia, and to appear in front of administrative and regulatory bodies, including the European Commission, the Korea Fair Trade Commission and the Japan Fair Trade Commission to defend our business model and, in some cases, to rebuff efforts by companies to gain competitive advantage or negotiating leverage.

We have been and will continue evaluating and providing reasonable assistance to our customers. This includes, in some cases, certain levels of financial support to minimize the impact of the litigation in which we are involved.

We will continue to devote resources to working with and educating all participants in the wireless value chain as to the benefits of our business model in promoting a highly competitive and innovative wireless

market. However, we expect that certain companies may continue to be dissatisfied with the need to pay reasonable royalties for the use of our technology and not welcome the success of our business model in enabling new, highly cost-effective competitors to their products. We expect that such companies will continue to challenge our business model in various forums throughout the world.

Table of Contents

- (1) According to public reports made available at www.cdg.org.
- (2) As reported by the Global mobile Suppliers Association, an international organization of WCDMA and GSM (Global System for Mobile Communications) suppliers in their April 2008 reports.

Further discussion of risks related to our business is presented in the Risk Factors included in this Quarterly Report.

Revenue Concentrations

Revenues from customers in South Korea, China, Japan and the United States comprised 35%, 22%, 16% and 10%, respectively, of total consolidated revenues for the first six months of fiscal 2008, as compared to 29%, 22%, 18% and 14%, respectively, for the first six months of fiscal 2007. We distinguish revenues from external customers by geographic areas based on the location to which our products, software or services are delivered and, for QTL's licensing and royalty revenues, the invoiced addresses of our licensees. The increase in revenues from customers in South Korea from 29% to 35% of total revenues is primarily attributable to increased shipments of integrated circuits to CDMA device manufacturers with locations in South Korea and royalty revenues from customers in South Korea. Combined revenues from customers in Japan and the United States decreased as a percentage of total revenues, from 32% to 26%, primarily due to the increased activity by manufacturers with locations in South Korea.

Critical Accounting Policies and Estimates

Income Taxes. On October 1, 2007, we adopted the accounting provisions of FASB Interpretation No. 48 (FIN 48), Accounting for Uncertainty in Income Taxes. As a result of the adoption, we increased our liabilities related to uncertain tax positions by \$2 million and accounted for the cumulative effect of this change as a decrease to retained earnings. See Notes to Condensed Consolidated Financial Statements, Note 4 Income Taxes for additional information. As of March 30, 2008, our liability for net unrecognized tax benefits was \$212 million.

Our income tax returns are based on calculations and assumptions that are subject to examination by the Internal Revenue Service and other tax authorities. In addition, the calculation of our tax liabilities involves dealing with uncertainties in the application of complex tax regulations. As a result of the implementation of FIN 48, we recognize liabilities for uncertain tax positions based on the two-step process prescribed in the interpretation. The first step is to evaluate the tax position for recognition by determining if the weight of available evidence indicates that it is more likely than not that the position will be sustained on audit, including resolution of related appeals or litigation processes, if any. The second step is to measure the tax benefit as the largest amount that is more than 50% likely of being realized upon settlement. While we believe we have appropriate support for the positions taken on our tax returns, we regularly assess the potential outcomes of these examinations and any future examinations for the current or prior years in determining the adequacy of our provision for income taxes. Although the timing and ultimate resolution of audits is uncertain, we do not believe it is reasonably possible that the total amounts of unrecognized tax benefits will materially change in the next 12 months.

Second Quarter of Fiscal 2008 Compared to Second Quarter of Fiscal 2007

Revenues. Total revenues for the second quarter of fiscal 2008 were \$2.61 billion, compared to \$2.22 billion for the second quarter of fiscal 2007.

Revenues from sales of equipment and services for the second quarter of fiscal 2008 were \$1.73 billion, compared to \$1.37 billion for the second quarter of fiscal 2007. Revenues from sales of integrated circuit products increased \$359 million, resulting primarily from an increase of \$329 million related to higher unit shipments, mostly consisting of MSM and accompanying RF and PM integrated circuits, and an increase of \$36 million related to the net effects of changes in product mix and the average sales prices of such products.

Revenues from licensing and royalty fees for the second quarter of fiscal 2008 were \$881 million, compared to \$851 million for the second quarter of fiscal 2007. Revenues from licensing and royalty fees increased primarily as a result of a \$38 million increase in QTL royalties related to an increase in sales of CDMA-based products by licensees driven by the continued adoption of WCDMA at higher ASPs than CDMA and settlement of the Sony Ericsson arbitration, partially offset by the effect of Nokia's failure to report royalties on its sales after April 9, 2007.

Table of Contents

Cost of Equipment and Services. Cost of equipment and services revenues for the second quarter of fiscal 2008 was \$820 million, compared to \$634 million for the second quarter of fiscal 2007. Cost of equipment and services revenues as a percentage of equipment and services revenues was 48% for the second quarter of fiscal 2008, compared to 46% for the second quarter of fiscal 2007. The decline in gross margin percentage in the second quarter of fiscal 2008 compared to the second quarter of fiscal 2007 was primarily attributable to the effect of the commencement of our MediaFLO services in March 2007. Cost of equipment and services revenues included \$9 million in share-based compensation in the second quarter of both fiscal 2008 and 2007. Cost of equipment and services revenues as a percentage of equipment and services revenues may fluctuate in future quarters depending on the mix of products sold and services provided, competitive pricing, new product introduction costs and other factors.

Research and Development Expenses. For the second quarter of fiscal 2008, research and development expenses were \$553 million or 21% of revenues, compared to \$454 million or 20% of revenues for the second quarter of fiscal 2007. The dollar increase was primarily attributable to a \$90 million increase in costs related to the development of integrated circuit products, next-generation CDMA and OFDMA technologies, the expansion of our intellectual property portfolio and other initiatives to support the acceleration of advanced wireless products and services, including lower-cost devices, the integration of wireless with consumer electronics and computing, the convergence of multiband, multimode, multinet network products and technologies, third-party operating systems and services platforms. The technologies supporting these initiatives may include CDMA2000 1X, 1xEV-DO, EV-DO Revision A, EV-DO Revision B, WCDMA (including GSM/GPRS/EDGE), HSDPA, HSUPA and OFDMA. Research and development expenses related to the development of our FLO technology, MediaFLO MDS, IMOD display products using MEMS technology, BREW products and mobile commerce applications increased by \$15 million. Research and development expenses for the second quarter of fiscal 2008 included share-based compensation of \$60 million, compared to \$58 million in the second quarter of fiscal 2007. Research and development expenses for the second quarter of fiscal 2007 also included in-process research and development of \$10 million. No in-process research and development was recorded in the second quarter of fiscal 2008.

Selling, General and Administrative Expenses. For the second quarter of fiscal 2008, selling, general and administrative expenses were \$420 million or 16% of revenues, compared to \$385 million or 17% of revenues for the second quarter of fiscal 2007. The dollar increase was primarily attributable to a \$29 million increase in professional fees and a \$20 million increase in employee-related expenses, partially offset by a \$21 million decrease in bad debt expense. Selling, general and administrative expenses for the second quarter of fiscal 2008 included share-based compensation of \$61 million, compared to \$60 million in the second quarter of fiscal 2007.

Net Investment Income. Net investment income was \$93 million for the second quarter of fiscal 2008, compared to \$180 million for the second quarter of fiscal 2007. The net decrease was comprised as follows (in millions):

	Three Months Ended		
	March		
	30, 2008	April 1, 2007	Change
Interest and dividend income:			
Corporate and other segments	\$ 117	\$ 125	\$ (8)
QSI		3	(3)
Interest expense	(6)	(2)	(4)
Net realized gains on investments:			
Corporate	13	49	(36)
QSI	24	6	18
Other-than-temporary losses on investments	(62)	(1)	(61)
Gains on derivative instruments	4		4
Equity in earnings of investees	3		3
	\$ 93	\$ 180	\$ (87)

Table of Contents

The decrease in interest and dividend income on cash, cash equivalents and marketable securities held by corporate and other segments was primarily a result of lower average balances on interest-bearing securities and lower interest rates. Other-than-temporary losses in the second quarter of fiscal 2008 generally related to market liquidity concerns that have depressed securities values over the past few months, which also contributed to the decrease in net realized gains on corporate investments. Net realized gains on QSI investments in the second quarter of fiscal 2008 were related to the sale of our investment in Inquam.

Income Tax Expense. Income tax expense was \$140 million for the second quarter of fiscal 2008, compared to \$202 million for the second quarter of fiscal 2007. The annual effective tax rate is estimated to be 16% for fiscal 2008, compared to the annual effective rate of 9% for fiscal 2007. The 15% effective tax rate recorded in the second quarter of fiscal 2008 was lower than the estimated annual effective tax rate for fiscal 2008 due to a change in our estimate of foreign earnings taxed at less than the United States federal tax rate. The 22% effective tax rate recorded in the second quarter of fiscal 2007 was higher than the annual effective tax rate primarily due to the impact of prior year audits completed during the fourth quarter of fiscal 2007.

The estimated annual effective tax rate for fiscal 2008 is 19% lower than the United States federal statutory rate primarily due to benefits of approximately 23% related to foreign earnings taxed at less than the United States federal rate and 1% related to research and development tax credits, partially offset by state taxes of approximately 5%.

First Six Months of Fiscal 2008 Compared to First Six Months of Fiscal 2007

Revenues. Total revenues for the first six months of fiscal 2008 were \$5.05 billion, compared to \$4.24 billion for the first six months of fiscal 2007. Revenues from two customers of our QCT, QTL and QWI segments (each of whom accounted for more than 10% of our consolidated revenues for the period) comprised approximately 30% and 26% in aggregate of total consolidated revenues in the first six months of fiscal 2008 and 2007, respectively.

Revenues from sales of equipment and services for the first six months of fiscal 2008 were \$3.43 billion, compared to \$2.71 billion for the first six months of fiscal 2007. Revenues from sales of integrated circuit products increased \$698 million, resulting primarily from an increase of \$621 million related to higher unit shipments, mostly consisting of MSM and accompanying RF and PM integrated circuits, and an increase of \$100 million related to the net effects of changes in product mix and the average sales prices of such products.

Revenues from licensing and royalty fees for the first six months of fiscal 2008 were \$1.62 billion, compared to \$1.53 billion for the first six months of fiscal 2007. Revenues from licensing and royalty fees increased primarily as a result of a \$92 million increase in QTL royalties related to an increase in sales of CDMA-based products by licensees driven by the continued adoption of WCDMA at higher ASPs than CDMA and settlement of the Sony Ericsson arbitration, partially offset by the effect of Nokia's failure to report royalties on its sales after April 9, 2007.

Cost of Equipment and Services. Cost of equipment and services revenues for the first six months of fiscal 2008 was \$1.60 billion, compared to \$1.27 billion for the first six months of fiscal 2007. Cost of equipment and services revenues as a percentage of equipment and services revenues was 47% for the first six months of fiscal 2008 and 2007. Gross margin percentage remained flat in the first six months of fiscal 2008 compared to the first six months of fiscal 2007 primarily due to the increase in QCT equipment and services revenues as a percentage of total equipment and services revenues, offset by the effect related to the commencement of our MediaFLO services in March 2007. Cost of equipment and services revenues in the first six months of fiscal 2008 included \$19 million in share-based compensation, compared to \$20 million in the first six months of fiscal 2007.

Research and Development Expenses. For the first six months of fiscal 2008, research and development expenses were \$1.06 billion or 21% of revenues, compared to \$895 million or 21% of revenues for the first six months of fiscal 2007. The dollar increase was primarily attributable to a \$151 million increase in costs related to the development of integrated circuit products, next-generation CDMA and OFDMA technologies, the expansion of our intellectual property portfolio and other initiatives to support the acceleration of advanced wireless products and services, including lower-cost devices, the integration of wireless with consumer electronics and computing, the convergence of multiband, multimode, multinetwork products and technologies, third-party operating systems and services platforms. The technologies supporting these initiatives may include CDMA2000 1X, 1xEV-DO, EV-DO Revision A, EV-DO Revision B, WCDMA (including GSM/GPRS/EDGE), HSDPA, HSUPA and OFDMA. Research and development expenses related to the development of our FLO technology, MediaFLO MDS, IMOD display products using MEMS

technology, BREW products and mobile commerce applications increased by \$29 million. Research and development expenses in the first six months of fiscal 2008 included share-based compensation and in-process research and development of \$117 million and \$2 million, respectively, compared to \$115 million and \$10 million, respectively, in the first six months of fiscal 2007.

Table of Contents

Selling, General and Administrative Expenses. For the first six months of fiscal 2008, selling, general and administrative expenses were \$808 million or 16% of revenues, compared to \$754 million or 18% of revenues for the first six months of fiscal 2007. The dollar increase was primarily attributable to a \$52 million increase in employee-related expenses and a \$38 million increase in professional fees, partially offset by a \$36 million decrease in bad debt expense. Selling, general and administrative expenses in the first six months of fiscal 2008 included share-based compensation of \$121 million, compared to \$123 million in the first six months of fiscal 2007.

Net Investment Income. Net investment income was \$265 million for the first six months of fiscal 2008, compared to \$383 million for the first six months of fiscal 2007. The net decrease was comprised as follows (in millions):

	Six Months Ended		
	March	April 1,	
	30,	2007	Change
	2008		
Interest and dividend income:			
Corporate and other segments	\$ 269	\$ 266	\$ 3
QSI	1	4	(3)
Interest expense	(13)	(3)	(10)
Net realized gains on investments:			
Corporate	83	112	(29)
QSI	35	7	28
Other-than-temporary losses on investments	(119)	(2)	(117)
Gains (losses) on derivative instruments	6	(1)	7
Equity in earnings of investees	3		3
	\$ 265	\$ 383	\$ (118)

Other-than-temporary losses in the first six months of fiscal 2008 generally related to market liquidity concerns that have depressed securities values over the past few months, which also contributed to the decrease in net realized gains on corporate investments. Net realized gains on QSI investments in the first six months of fiscal 2008 relate primarily to the sale of our investment in Inquam.

Income Tax Expense. Income tax expense was \$303 million for the first six months of fiscal 2008, compared to \$333 million for the first six months of fiscal 2007. The effective tax rate was 17% for the first six months of fiscal 2008, compared to 20% for the first six months of fiscal 2007. The annual effective tax rate is estimated to be 16% for fiscal 2008, compared to the annual effective rate of 9% for fiscal 2007. The 17% effective tax rate recorded in the first six months of fiscal 2008 was higher than the estimated annual effective tax rate for fiscal 2008 due to the effect of discrete items recorded in the first six months of fiscal 2008, primarily the revaluation of deferred tax assets to reflect changes in the blended state tax rate and a change in the forecast of our ability to use capital loss carryforwards, partially offset by a change in our estimate of foreign earnings taxed at less than the United States federal tax rate that occurred in the second quarter of fiscal 2008. The 20% effective tax rate recorded in the first six months of fiscal 2007 was higher than the annual effective tax rate of 9% primarily due to the impact of prior year audits completed during the fourth quarter of fiscal 2007.

The estimated annual effective tax rate for fiscal 2008 is 19% lower than the United States federal statutory rate primarily due to benefits of approximately 23% related to foreign earnings taxed at less than the United States federal rate and 1% related to research and development tax credits, partially offset by state taxes of approximately 5%.

Our Segment Results for the Second Quarter of Fiscal 2008 Compared to the Second Quarter of Fiscal 2007

The following should be read in conjunction with the second quarter financial results of fiscal 2008 for each reporting segment. See Notes to Condensed Consolidated Financial Statements, Note 7 Segment Information.

Table of Contents

QCT Segment. QCT revenues for the second quarter of fiscal 2008 were \$1.62 billion, compared to \$1.26 billion for the second quarter of fiscal 2007. Equipment and services revenues, mostly consisting of MSM and accompanying RF and PM integrated circuits, were \$1.58 billion for the second quarter of fiscal 2008, compared to \$1.22 billion for the second quarter of fiscal 2007. The increase in equipment and services revenues resulted primarily from an increase of \$329 million related to higher unit shipments and an increase of \$36 million related to the net effects of changes in product mix and the average sales prices of such products. Approximately 85 million MSM integrated circuits were sold during the second quarter of fiscal 2008, compared to approximately 61 million for the second quarter of fiscal 2007.

QCT's earnings before taxes for the second quarter of fiscal 2008 were \$427 million, compared to \$368 million for the second quarter of fiscal 2007. QCT's operating income as a percentage of its revenues (operating margin percentage) was 26% in the second quarter of fiscal 2008, compared to 29% in the second quarter of fiscal 2007. The decrease in operating margin percentage was primarily due to a decrease in gross margin percentage related to an increase in product support costs and increases in research and development and selling, general and administrative expenses.

QCT inventories increased by 35% since September 30, 2007 to \$522 million at March 30, 2008 due to the shift in our manufacturing business model from turnkey to IFM and related increased purchases of completed die directly from foundry suppliers for use in QCT's integrated circuit products.

QTL Segment. QTL revenues for the second quarter of fiscal 2008 were \$795 million, compared to \$759 million for the second quarter of fiscal 2007. QTL's earnings before taxes for the second quarter of fiscal 2008 were \$684 million, compared to \$636 million for the second quarter of fiscal 2007. QTL's operating margin percentage was 86% in the second quarter of fiscal 2008, compared to 83% in the second quarter of fiscal 2007. The increase in revenues primarily resulted from a \$38 million increase in royalties, which were \$784 million in the second quarter of fiscal 2008, compared to \$746 million in the second quarter of fiscal 2007. The increase in royalties resulted from an increase in sales of CDMA-based products by licensees driven by the continued adoption of WCDMA at higher ASPs than CDMA and settlement of the Sony Ericsson arbitration, partially offset by the effect of Nokia's failure to report royalties on its sales after April 9, 2007. Revenues from amortized license fees were \$11 million in the second quarter of fiscal 2008, compared to \$13 million in the second quarter of fiscal 2007. The increase in QTL's earnings before taxes for the second quarter of fiscal 2008 as compared to the second quarter of fiscal 2007 was primarily attributable to the increase in revenues and a decrease in bad debt expense, which resulted in a corresponding increase in operating margin percentage.

QWI Segment. QWI revenues for the second quarter of fiscal 2008 were \$194 million, compared to \$198 million for the second quarter of fiscal 2007. Revenues decreased primarily due to a decrease in QES revenues of \$19 million, partially offset by an increase in QIS revenues of \$12 million. The decrease in QES revenues was primarily attributable to a decrease in revenues from product sales. The increase in QIS revenues was primarily attributable to increases in QChat revenues resulting from increased development efforts under the licensing agreement with Sprint and increases in fees related to our expanded BREW customer base and products.

QWI's earnings before taxes for the second quarter of fiscal 2008 were less than \$1 million, compared to \$20 million for the second quarter of fiscal 2007. QWI's operating margin percentage was less than 1% in the second quarter of fiscal 2008, compared to 10% in the second quarter of fiscal 2007. The decrease in earnings before taxes was primarily attributable to a \$10 million increase in operating expenses as a result of the acquisition of Firethorn during the first quarter of fiscal 2008 and an \$8 million increase in QIS research and development expenses related to our BREW products, both of which resulted in a corresponding decrease in operating margin percentage.

QSI Segment. QSI's loss before taxes for the second quarter of fiscal 2008 was \$63 million, compared to \$42 million for the second quarter of fiscal 2007. QSI's loss before taxes included a \$22 million increase in our MediaFLO USA subsidiary's loss before taxes comprised primarily of an increase of \$21 million in cost of equipment and services revenues related to the commencement of our MediaFLO services in March 2007.

Our Segment Results for the First Six Months of Fiscal 2008 Compared to the First Six Months of Fiscal 2007

The following should be read in conjunction with the first six months financial results of fiscal 2008 for each reporting segment. See Notes to Condensed Consolidated Financial Statements Note 7 Segment Information.

Table of Contents

QCT Segment. QCT revenues for the first six months of fiscal 2008 were \$3.19 billion, compared to \$2.49 billion for the first six months of fiscal 2007. Equipment and services revenues, mostly consisting of MSM and accompanying RF and PM integrated circuits, were \$3.11 billion for the first six months of fiscal 2008, compared to \$2.41 billion for the first six months of fiscal 2007. The increase in equipment and services revenues resulted primarily from an increase of \$621 million related to higher unit shipments and an increase of \$100 million related to the net effects of changes in product mix and the average sales prices of such products. Approximately 163 million MSM integrated circuits were sold during the first six months of fiscal 2008, compared to approximately 120 million for the first six months of fiscal 2007.

QCT's earnings before taxes for the first six months of fiscal 2008 were \$897 million, compared to \$684 million for the first six months of fiscal 2007. QCT's operating income as a percentage of its revenues (operating margin percentage) was 28% in the first six months of fiscal 2008, compared to 27% in the first six months of fiscal 2007. The increase in operating margin percentage was primarily due to an increase in gross margin percentage related to the net effects of changes in product mix and reductions in average sales prices and unit costs of such products.

QTL Segment. QTL revenues for the first six months of fiscal 2008 were \$1.45 billion, compared to \$1.36 billion for the first six months of fiscal 2007. QTL's earnings before taxes for the first six months of fiscal 2008 were \$1.22 billion, compared to \$1.13 billion for the first six months of fiscal 2007. QTL's operating margin percentage was 85% in the first six months of fiscal 2008, compared to 83% in the first six months of fiscal 2007. The increase in revenues primarily resulted from a \$92 million increase in royalties, which were \$1.42 billion in the first six months of fiscal 2008, compared to \$1.33 billion in the first six months of fiscal 2007. The increase in royalties resulted from an increase in sales of CDMA-based products by licensees driven by the continued adoption of WCDMA at higher ASPs than CDMA and settlement of the Sony Ericsson arbitration, partially offset by the effect of Nokia's failure to report royalties on its sales after April 9, 2007. Revenues from amortized license fees were \$21 million in the first six months of fiscal 2008, compared to \$27 million in the first six months of fiscal 2007. The increase in QTL's earnings before taxes for the first six months of fiscal 2008 as compared to the first six months of fiscal 2007 was primarily attributable to the increase in revenues and a decrease in bad debt expense, which resulted in a corresponding increase in operating margin percentage.

QWI Segment. QWI revenues for the first six months of fiscal 2008 were \$405 million, compared to \$387 million for the first six months of fiscal 2007. Revenues increased primarily due to a \$27 million increase in QIS revenues, partially offset by a \$15 million decrease in QES revenues. The increase in QIS revenues was primarily attributable to increases in QChat revenues resulting from increased development efforts under a licensing agreement with Sprint and our expanded BREW customer base and products. The decrease in QES revenues was primarily attributable to a decrease in revenues from product sales, partially offset by an increase in messaging revenues. QES shipped approximately 54,600 terrestrial-based and satellite-based systems during the first six months of fiscal 2008, compared to approximately 97,600 terrestrial-based and satellite-based systems in the first six months of fiscal 2007.

QWI's earnings before taxes for the first six months of fiscal 2008 were \$24 million, compared to \$40 million for the first six months of fiscal 2007. QWI's operating margin percentage was 6% in the first six months of fiscal 2008, compared to 10% in the first six months of fiscal 2007. The decrease in QWI's earnings before taxes was primarily due to a \$16 million increase in operating expenses as a result of the acquisition of Firethorn during the first quarter of fiscal 2008 and a \$15 million increase in QIS research and development expenses related to our BREW products, partially offset by the increase in revenues, all of which contributed to a corresponding decrease in operating margin percentage.

QSI Segment. QSI's loss before taxes for the first six months of fiscal 2008 was \$117 million, compared to \$85 million for the first six months of fiscal 2007. QSI's loss before taxes included a \$43 million increase in our MediaFLO USA subsidiary's loss before taxes comprised primarily of an increase of \$43 million in cost of equipment and services revenues related to the commencement of our MediaFLO services in March 2007.

Liquidity and Capital Resources

Our principal sources of liquidity are our existing cash, cash equivalents and marketable securities, cash generated from operations and proceeds from the issuance of common stock under our stock option and employee stock purchase plans. Cash, cash equivalents and marketable securities were \$10.6 billion at March 30, 2008, a decrease of

\$1.3 billion from September 30, 2007. Our cash, cash equivalents and marketable securities at March 30, 2008 consisted of \$6.3 billion held by foreign subsidiaries with the remaining balance of \$4.3 billion held domestically. Due to tax considerations, we derive liquidity for operations primarily from domestic cash flow and

Table of Contents

investments held domestically. Cash provided by operating activities was \$1.8 billion during the six months ended both March 30, 2008 and April 1, 2007. Net proceeds from the issuance of common stock under our stock option and employee stock purchase plans was \$236 million during the six months ended March 30, 2008, compared to \$255 million during the six months ended April 1, 2007.

On March 11, 2008, we announced we had been authorized to repurchase up to \$2.0 billion of our common stock. The \$2.0 billion stock repurchase program replaced a \$3.0 billion stock repurchase program, of which approximately \$2.0 billion remained authorized for repurchases. The stock repurchase program has no expiration date. During the six months ended March 30, 2008, we repurchased and retired 42,616,000 shares of our common stock for \$1.7 billion. While we have not repurchased any of our shares under the \$2.0 billion stock repurchase program, we continue to evaluate repurchases under this program.

In March 2008, we were the high bidder in the U.S. Federal Communications Commission's (FCC) 700 MHz spectrum auction for eight licenses at a total cost of \$558 million. Five of these licenses, at a cost of \$555 million, are for the E block spectrum for the Boston, Los Angeles, New York City, Philadelphia and San Francisco Economic Areas, and we expect to use this spectrum for our MediaFLO business. In April 2008, we paid the remaining \$363 million balance due on our eight winning bids.

We announced dividends totaling \$227 million, or \$0.14 per share, during the second quarter of fiscal 2008, which were paid on March 28, 2008. On April 10, 2008, we announced a cash dividend of \$0.16 per share on our common stock, payable on June 27, 2008 to stockholders of record as of May 30, 2008. We intend to continue to pay quarterly dividends subject to capital availability and periodic determinations that cash dividends are in the best interest of our stockholders.

At March 30, 2008, we classified our auction rate securities with recorded values of \$196 million as noncurrent assets due to a disruption in credit markets that caused the auction mechanism to fail to set market-clearing rates and provide liquidity for sellers. However, a failed auction does not represent a default by the issuer of the underlying security. All of our auction rate securities are rated AAA/Aaa, are collateralized by student loans substantially guaranteed by the U.S. government and continue to pay interest in accordance with their contractual terms. The cash values of our auction rate securities, which are held by a foreign subsidiary, may not be accessible until a successful auction occurs, a buyer is found outside of the auction process, the securities are called by the issuer or the underlying securities have been prepaid or have matured. Due to the combined strength of our significant cash, short-term investments and operating cash flows, we do not anticipate the current illiquidity of auction rate securities to affect our operating plans.

As a result of recent adverse conditions in the financial markets, certain types of financial instruments, such as structured investment vehicles, sub-prime mortgage-backed securities and collateralized debt obligations, may present risks arising from liquidity and/or credit concerns. At March 30, 2008, our holdings in these categories of investments totaled approximately \$45 million and were predominantly AAA rated. In the event that these categories of investments that are experiencing credit concerns become illiquid, we do not believe this will materially affect our liquidity or results of operations.

Accounts receivable increased by 4% during the second quarter of fiscal 2008. Days sales outstanding, on a consolidated basis, were 24 days at both March 30, 2008 and December 30, 2007.

We believe our current cash and cash equivalents, marketable securities and our expected cash generated from operations will provide us with flexibility and satisfy our working and other capital requirements over the next fiscal year and beyond based on our current business plans. Our total research and development expenditures were \$1.06 billion in the first six months of fiscal 2008 and \$1.83 billion in fiscal 2007, and we expect to continue to invest heavily in research and development for new technologies, applications and services for the wireless industry. Our purchase obligations for the remainder of fiscal 2008 and for fiscal 2009, some of which relate to research and development activities, totaled \$896 million and \$141 million, respectively, at March 30, 2008. Cash used for strategic investments and acquisitions, net of cash acquired, was \$275 million in the first six months of fiscal 2008 and \$249 million in fiscal 2007, and we expect to continue making strategic investments and acquisitions to open new markets for our technology, expand our technology, obtain development resources, grow our patent portfolio or pursue new business opportunities.

Table of Contents**Contractual Obligations/Off-Balance Sheet Arrangements**

We have no significant contractual obligations not fully recorded on our condensed consolidated balance sheets or fully disclosed in the notes to our condensed consolidated financial statements. We have no material off-balance sheet arrangements as defined in S-K 303(a)(4)(ii).

Our consolidated balance sheet at March 30, 2008 includes a \$212 million noncurrent liability for uncertain tax positions, of which \$152 million may result in cash payment. We are not updating the disclosures in our long-term contractual obligations table presented in our 2007 Form 10-K because of the difficulty in making reasonably reliable estimates of the timing of cash settlements with the respective taxing authorities.

Additional information regarding our financial commitments at March 30, 2008 is provided in the notes to our condensed consolidated financial statements. See Notes to Condensed Consolidated Financial Statements, Note 4 Income Taxes and Note 6 Commitments and Contingencies.

Future Accounting Requirements

In September 2006, the FASB issued Statement No. 157 (FAS 157), Fair Value Measurements, which defines fair value, establishes a framework for measuring fair value, and expands disclosures about assets and liabilities measured at fair value in the financial statements. FAS 157 does not require any new fair value measurements, but applies to other accounting pronouncements that require or permit fair value measurements. In February 2007, the FASB issued Statement No. 159 (FAS 159), The Fair Value Option for Financial Assets and Financial Liabilities Including an Amendment of FASB Statement No. 115, which provides companies the irrevocable option to measure many financial assets and liabilities at fair value with the changes in fair value recognized in earnings resulting in an opportunity to mitigate volatility in earnings caused by measuring related assets and liabilities differently without having to apply complex hedge accounting provision. The accounting provisions of FAS 157 and FAS 159 will be effective for our fiscal 2009 beginning September 29, 2008. We are in the process of determining the effects, if any, the adoption of FAS 157 and FAS 159 will have on our consolidated financial statements.

In December 2007, the FASB revised Statement No. 141 (FAS 141R), Business Combinations, which establishes principles and requirements for how the acquirer in a business combination (i) recognizes and measures in its financial statements the identifiable assets acquired, the liabilities assumed and any noncontrolling interest in the acquiree, (ii) recognizes and measures the goodwill acquired in the business combination or a gain from a bargain purchase, and (iii) determines what information to disclose to enable users of the financial statements to evaluate the nature and financial effects of the business combination. FAS 141R will be effective for our fiscal 2010 beginning September 28, 2009. We are in the process of determining the effects, if any, the adoption of FAS 141R will have on our consolidated financial statements.

Risk Factors

You should consider each of the following factors as well as the other information in this Quarterly Report in evaluating our business and our prospects. The risks and uncertainties described below are not the only ones we face. Additional risks and uncertainties not presently known to us or that we currently consider immaterial may also impair our business operations. If any of the following risks actually occur, our business and financial results could be harmed. In that case, the trading price of our common stock could decline. You should also refer to the other information set forth in this Quarterly Report and in our Annual Report on Form 10-K for the fiscal year ended September 30, 2007, including our financial statements and the related notes.

If deployment of our technologies does not expand as expected, our revenues may not grow as anticipated.

We focus our business primarily on developing, patenting and commercializing CDMA technology for wireless telecommunications applications. Other digital wireless communications technologies, particularly GSM technology, have been more widely deployed than CDMA technology. If adoption and use of CDMA-based wireless communications standards do not continue in the countries where our products and those of our customers and licensees are sold, our business and financial results could suffer. If GSM wireless operators do not select CDMA for their networks or update their current networks to any CDMA-based third generation (3G) technology, our business and financial results could suffer since we have not generated significant revenues from GSM product sales. In addition to CDMA technology, we continue to invest in developing, patenting and commercializing OFDMA technology, which has not yet been widely adopted and commercially deployed. If OFDMA is not widely adopted and

commercially deployed, our investments in OFDMA technology may not provide us an adequate return.

Table of Contents

Our business and the deployment of our technologies, products and services are dependent on the success of our customers, licensees and CDMA-based wireless operators, as well as the timing of their deployment of new services. Our licensees and CDMA-based wireless operators may incur lower operating margins on products or services based on our technologies than on products using alternative technologies as a result of greater competition or other factors. If CDMA-based wireless operators, wireless device and/or infrastructure manufacturers cease providing CDMA-based products and/or services, the deployment of CDMA technology could be negatively affected, and our business could suffer.

We are dependent on the commercial deployment of 3G wireless communications equipment, products and services to increase our revenues, and our business may be harmed if wireless networks deploy other technologies.

To increase our revenues in future periods, we are dependent upon the commercial deployment of 3G wireless communications equipment, products and services based on our CDMA technology. Although wireless network operators have commercially deployed CDMA2000 and WCDMA, we cannot predict the timing or success of further commercial deployments or expansions of CDMA2000, WCDMA or other CDMA systems. If existing deployments are not commercially successful or do not continue to grow their subscriber base, or if new commercial deployments of CDMA2000, WCDMA or other CDMA-based systems are delayed or unsuccessful, our business and financial results may be harmed. In addition, our business could be harmed if wireless network operators deploy other technologies or switch existing networks from CDMA to GSM without upgrading to WCDMA or if wireless network operators introduce new technologies. A limited number of operators have started testing OFDMA technology, but OFDMA might not be adopted or commercially deployed and we might not be successful in developing and marketing OFDMA products.

Our patent portfolio may not be as successful in generating licensing income with respect to other technologies as it has been for CDMA-based technologies.

Although we own a very strong portfolio of issued and pending patents related to GPRS, EDGE, OFDM, OFDMA and/or MIMO technologies, our patent portfolio licensing program in these areas is less established and might not be as successful in generating licensing income as our CDMA portfolio licensing program. Sprint Nextel has indicated that it is planning to deploy WiMax (an OFDMA-based technology) in its 2.5 GHz spectrum, also known as the Broadband Radio Services band. Other operators are investigating deployment of WiMax or considering LTE, being standardized by 3GPP, or UMB, being standardized by 3GPP2, as next-generation technologies for deployment in existing or future spectrum bands. Verizon has announced its intention to begin developing its chosen fourth generation (4G) technology, LTE, during 2008 and to prepare for the time when its customers start demanding such 4G capabilities, while continuing the expansion and operation of its existing CDMA-based technologies for many years to come. Although we believe that our patented technology is essential and useful to implementation of the WiMax, LTE or UMB standards, we might not achieve the same royalty revenues on such WiMax, LTE or UMB deployments as on CDMA/WCDMA, and we might not achieve the same level of success in WiMax, LTE or UMB products as we have in CDMA/WCDMA products.

Our two largest customers accounted for 30% and 26% of consolidated revenues in the first six months of fiscal 2008 and 2007, respectively, and 27% and 26% of total consolidated revenues in fiscal 2007 and 2006, respectively. The loss of any one of our major customers or any reduction in the demand for devices utilizing our CDMA technology could reduce our revenues and harm our ability to achieve or sustain desired levels of operating results.

The loss of any one of our QCT segment's significant customers or the delay, even if only temporary, or cancellation of significant orders from any of these customers would reduce our revenues in the period of the cancellation or deferral and harm our ability to achieve or sustain expected levels of operating results. We derive a significant portion of our QCT segment revenues from two major customers. Accordingly, unless and until our QCT segment diversifies and expands its customer base, our future success will significantly depend upon the timing and size of any future purchase orders from these customers. Factors that may impact the size and timing of orders from customers of our QCT segment include, among others, the following:

the product requirements of our customers and the network operators;

Table of Contents

the financial and operational success of our customers;

the success of our customers' products that incorporate our products;

changes in wireless penetration growth rates;

value added features which drive replacement rates;

shortages of key products and components;

fluctuations in channel inventory levels;

the success of products sold to our customers by competitors;

the rate of deployment of new technology by the wireless network operators and the rate of adoption of new technology by the end consumers;

the extent to which certain customers successfully develop and produce CDMA-based integrated circuits and system software to meet their own needs or source such products from other suppliers;

general economic conditions;

changes in governmental regulations in countries where we or our customers currently operate or plan to operate; and

widespread illness.

We derive a significant portion of our royalty revenues in our QTL segment from a limited number of licensees and our future success depends on the ability of our licensees to obtain market acceptance for their products.

Our QTL segment today derives royalty revenues primarily from sales of CDMA products by our licensees. Although we have more than 150 licensees, we derive a significant portion of our royalty revenues from a limited number of licensees. Our future success depends upon the ability of our licensees to develop, introduce and deliver high-volume products that achieve and sustain market acceptance. We have little or no control over the sales efforts of our licensees, and our licensees might not be successful. Reductions in the average selling price of wireless communications devices utilizing our CDMA technology, without a comparable increase in the volumes of such devices sold, could have a material adverse effect on our business.

We may not be able to modify some of our license agreements to license later patents without modifying some of the other material terms and conditions of such license agreements, and such modifications may impact our revenues.

The licenses granted to and from us under a number of our license agreements include only patents that are either filed or issued prior to a certain date, and, in a small number of agreements, royalties are payable on those patents for a specified time period. As a result, there are agreements with some licensees where later patents are not licensed by or to us under our license agreements. In order to license any such later patents, we will need to extend or modify our license agreements or enter into new license agreements with such licensees. We might not be able to modify such license agreements in the future to license any such later patents or extend such date(s) to incorporate later patents without affecting the material terms and conditions of our license agreements with such licensees. In particular, we are party to litigation with Nokia Corp. relating to Nokia's continued sales after April 9, 2007 of products that incorporate certain Qualcomm patents. One of our contentions in that proceeding (which Nokia disputes) is that such use of our patents resulted in an extension of the license agreement, which also extends our rights to sell integrated circuits under Nokia's patents. We might not prevail on such claims. If we do not prevail, Nokia's right to sell certain subscriber products (such as cellular phones, wireless personal digital assistants and other devices) under most of our patents

(including many that we have declared as potentially essential to the CDMA, WCDMA and other standards), and therefore Nokia's obligation to pay royalties to us under the terms of the current agreement, may both cease, and our rights under certain of Nokia's patents to sell integrated circuits under the terms of the current agreement may likewise cease. If we do not prevail, and the court does not find Nokia to have extended the license agreement, the above rights could be extended if Nokia expressly elects to extend the agreement beyond April 9, 2007, a right that is exercisable through December 31, 2008 unless earlier terminated.

Table of Contents

Efforts by some telecommunications equipment manufacturers and component suppliers to avoid paying fair and reasonable royalties for the use of our intellectual property may create uncertainty about our future business prospects, may require the investment of substantial management time and financial resources, and may result in legal decisions and/or political actions by foreign governments that harm our business.

A small number of companies have initiated various strategies in an attempt to renegotiate, mitigate and/or eliminate their need to pay royalties to us for the use of our intellectual property in order to negatively affect our business model and that of our other licensees. These strategies have included (i) litigation, often alleging infringement of patents held by such companies or unfair competition of some variety, (ii) taking questionable positions on the interpretation of contracts with us, with royalty reduction as the likely true motive, (iii) appeals to governmental authorities, such as the complaints filed with the European Commission (EC) during the fourth calendar quarter of 2005 and with the Korea Fair Trade Commission (KFTC) and the Japan Fair Trade Commission (JFTC) during 2006, (iv) collective action intended to depress license fees, including working with carriers, standards bodies and other organizations, formal and informal, to adopt intellectual property policies which could have the effect of limiting returns on intellectual property innovations, and (v) lobbying with governmental regulators and elected officials for the purpose of seeking the imposition of some form of compulsory licensing and/or to weaken a patent holder's ability to enforce its rights or obtain a fair return for such rights. A number of these strategies are purportedly based on interpretations of the policies of certain standards development organizations concerning the licensing of patents that are or may be essential to industry standards and our alleged failure to abide by these policies.

Six companies (Nokia, Ericsson, Panasonic, Texas Instruments, Broadcom and NEC) submitted separate formal complaints to the Competition Directorate of the EC accusing our business practices, with respect to licensing of patents and sales of chipsets, to be in violation of Article 82 of the EC treaty. We received the complaints, have submitted a response and have cooperated with the EC in its investigation. On October 1, 2007, the EC announced that it has initiated a proceeding though it has not decided to issue a Statement of Objections, and it has not made any conclusions as to the merits of the complaints. While this action does not indicate that the EC has found any evidence of a violation by us and we believe that none of our business practices violate the legal requirements of Article 82 of the EC treaty, if the EC determines liability as to any of the alleged violations, it could impose fines and/or require us to modify our practices. Further, the continuation of this investigation could be expensive and time consuming to address, divert management attention from our business and harm our reputation. Although such potential adverse findings may be appealed within the EC legal system, an adverse final determination could have a significant negative impact on our revenues and/or earnings. We also understand that 1) two U.S. companies (Texas Instruments and Broadcom) and two South Korean companies (Nextreaming Corp. and Thin Multimedia, Inc.) have filed complaints with the KFTC alleging that our business practices are, in some way, a violation of South Korean competition laws and 2) unnamed parties filed a complaint with the JFTC allegedly claiming that our business practices are, in some way a violation of the Japanese competition laws. While we have not seen any of these complaints in South Korea or Japan, we believe that none of our business practices violate the legal requirements of South Korean competition law or Japanese competition law. However, we have cooperated with the investigations of these complaints in South Korea and Japan, and any continuation or expansion of these investigations could be expensive and time consuming to address, divert management attention from our business and harm our reputation. An adverse final determination on these charges could have a significant negative impact on our business, including our revenues and/or earnings.

Although we believe that these challenges are without merit, and we will continue to vigorously defend our intellectual property rights and our right to continue to receive a fair return for our innovations, the distractions caused by challenges to our business model and licensing program are undesirable and the legal and other costs associated with defending our position have been and continue to be significant. We assume, as should investors, that such challenges will continue into the foreseeable future and may require the investment of substantial management time and financial resources to explain and defend our position.

The enforcement and protection of our intellectual property rights may be expensive and could divert our valuable resources.

We rely primarily on patent, copyright, trademark and trade secret laws, as well as nondisclosure and confidentiality agreements and other methods, to protect our proprietary information, technologies and processes,

including our patent portfolio. Policing unauthorized use of our products and technologies is difficult and time consuming. We cannot be certain that the steps we have taken will prevent the misappropriation or unauthorized use of our proprietary information and technologies, particularly in foreign countries where the laws may not protect our

Table of Contents

proprietary intellectual property rights as fully or as readily as United States laws. We cannot be certain that the laws and policies of any country, including the United States, or the practices of any of the standards bodies, foreign or domestic, with respect to intellectual property enforcement or licensing, issuance of wireless licenses or the adoption of standards, will not be changed in a way detrimental to our licensing program or to the sale or use of our products or technology. Recent decisions from the United States courts relating to patents may affect the ability to enforce patent rights. In addition, a recent case argued before the United States Supreme Court has sought to extend the concept of patent exhaustion in a manner which could have an adverse impact on our licensing business. Within the United States Senate and House of Representatives, committee work has progressed to draft a patent reform law, with the House and Senate committees each having reported a different draft bill to the full House and Senate, respectively. The full House has adopted its committee's draft bill. The end product of such work could be new patent legislation detrimental to our licensing program or to the sale or use of our products or technology. Any efforts we make to inform and educate policymakers about the effects of such potential changes may absorb significant management time and attention, which, in turn, could negatively impact our operating results.

The vast majority of our patents and patent applications relate to our wireless communications technology and much of the remainder of our patents and patent applications relate to our other technologies and products. We may need to litigate to enforce our intellectual property rights, protect our trade secrets or determine the validity and scope of proprietary rights of others. As a result of any such litigation, we could lose our ability to enforce one or more patents or incur substantial unexpected operating costs. Any action we take to enforce our intellectual property rights could be costly and could absorb significant management time and attention, which, in turn, could negatively impact our operating results. In addition, failure to protect our trademark rights could impair our brand identity.

Claims by other companies that we infringe their intellectual property, that patents on which we rely are invalid, or that our business practices are in some way unlawful could adversely affect our business.

From time to time, companies have asserted, and may again assert, patent, copyright and other intellectual proprietary rights against our products or products using our technologies or other technologies used in our industry. These claims have resulted and may again result in our involvement in litigation. We may not prevail in such litigation given the complex technical issues and inherent uncertainties in intellectual property litigation. If any of our products were found to infringe on another company's intellectual property rights, we could be subject to an injunction or required to redesign our products, which could be costly, or to license such rights and/or pay damages or other compensation to such other company. If we were unable to redesign our products or license such intellectual property rights used in our products, we could be prohibited from making and selling such products.

We expect that we will continue to be involved in litigation and may have to appear in front of administrative bodies (such as the U.S. International Trade Commission) to defend against patent assertions against our products by companies, some of whom are attempting to gain competitive advantage or negotiating leverage in licensing negotiations. We may not be successful and, if we are not, the range of possible outcomes includes everything from a royalty payment to an injunction on the sale of certain of our chipsets (and on the sale of our customers' devices using our chipsets) and the imposition of royalty payments that might make sales of our chipsets uneconomic. A negative outcome in any such litigation could severely disrupt the business of our chipset customers and their wireless customers, which in turn could hurt our relationships with our chipset customers and wireless operators and could result in a decline in our chipset market share and/or a reduction in our licensees' sales to wireless operators, causing a corresponding decline in our chipset and/or licensing revenues.

While we have had many settlement discussions with Broadcom, they have not been fruitful to date, and the prospects for a reasonable settlement appear to be remote at this time. To date, Broadcom has insisted that any comprehensive settlement include the right to pass through to its customers our intellectual property rights licensed by us to Broadcom. Any such arrangement could have a material impact on our licensing and royalty business model.

In addition, intellectual property rights claims in our industry are common, and, as the number of competitors in the market increases and the functionality of our products expands to include additional technologies and features, we may become subject to claims of infringement or misappropriation of the intellectual property rights of others. Any claims, regardless of their merit, could be time consuming to address, result in costly litigation, divert the efforts of our technical and management personnel or cause product release or shipment delays, any of which could have a

material adverse effect upon our operating results. In any potential dispute involving other companies' patents or other intellectual property, our chipset customers could also become the targets of litigation. Any such

Table of Contents

litigation could severely disrupt the business of our chipset customers and their wireless operator customers, which in turn could hurt our relationships with our chipset customers and wireless operators and could result in a decline in our chipset market share and/or a reduction in our licensees' sales to wireless operators, causing a corresponding decline in our chipset and/or licensing revenues.

A number of other companies have claimed to own patents essential to various CDMA standards, GSM standards and implementations of OFDM and OFDMA systems. If we or other product manufacturers are required to obtain additional licenses and/or pay royalties to one or more patent holders, this could have a material adverse effect on the commercial implementation of our CDMA or multimode products and technologies, demand for our licensees' products, and our profitability.

Other companies or entities also have and may again commence actions seeking to establish the invalidity of our patents. In the event that one or more of our patents are challenged, a court may invalidate the patent(s) or determine that the patent(s) is not enforceable, which could harm our competitive position. If our key patents are invalidated, or if the scope of the claims in any of these patents is limited by court decision, we could be prevented from licensing the invalidated or limited portion of such patents. Such adverse decisions could negatively impact our revenues. Even if such a patent challenge is not successful, it could be expensive and time consuming to address, divert management attention from our business and harm our reputation.

Our industry is subject to competition that could result in decreased demand for our products and the products of our customers and licensees and/or declining average selling prices for our licensees' products and our products, negatively affecting our revenues and operating results.

We currently face significant competition in our markets and expect that competition will continue. Competition in the telecommunications market is affected by various factors, including:

comprehensiveness of products and technologies;

value added features which drive replacement rates;

manufacturing capability;

scalability and the ability of the system technology to meet customers' immediate and future network requirements;

product performance and quality;

design and engineering capabilities;

compliance with industry standards;

time-to-market;

system cost; and

customer support.

This competition may result in increased development costs and reduced average selling prices for our products and those of our customers and licensees. Reductions in the average selling price of our licensees' products, unless offset by an increase in volumes, generally result in reduced royalties payable to us. While pricing pressures from competition may, to a large extent, be mitigated by the introduction of new features and functionality in our licensees' products, there is no guarantee that such mitigation will occur. We anticipate that additional competitors will enter our markets as a result of growth opportunities in wireless telecommunications, the trend toward global expansion by foreign and domestic competitors, technological and public policy changes and relatively low barriers to entry in selected segments of the industry.

Companies that promote non-CDMA technologies (e.g. GSM) and companies that design competing CDMA-based integrated circuits are generally included amongst our competitors or potential competitors in the United States or abroad. Examples (some of whom are strategic partners of ours in other areas) include Broadcom, EoNex Technologies, Ericsson, Freescale, Fujitsu, Intel, LSI Corporation, NEC, Nokia, Renesas, Samsung, Texas Instruments and VIA Telecom. With respect to our QES business, our competitors are aggressively pricing products and services and are offering new value-added products and services which may impact margins, intensify competition in current and new markets and harm our ability to compete in certain markets.

Table of Contents

Many of these current and potential competitors have advantages over us, including:
longer operating histories and market presence;

greater name recognition;

motivation by our customers in certain circumstances to find alternate suppliers;

access to larger customer bases;

economies of scale and cost structure advantages; and

greater sales and marketing, manufacturing, distribution, technical and other resources than we have.

As a result of these and other factors, our competitors may be more successful than us. In addition, we anticipate additional competitors will begin to offer and sell products based on 3G standards. These competitors may have more established relationships and distribution channels in markets not currently deploying CDMA-based wireless communications technology. These competitors also may have established or may establish financial or strategic relationships among themselves or with our existing or potential customers, resellers or other third parties. These relationships may affect our customers' decisions to purchase products or license technology from us. Accordingly, new competitors or alliances among competitors could emerge and rapidly acquire significant market share of sales to our detriment. In addition to the foregoing, we have seen, and believe we will continue to see, an increase in customers requesting that we develop products, including chipsets, that will operate in an open source environment. Developing open source compliant products, without imperiling the intellectual property rights upon which our licensing business depends, may prove difficult under certain circumstances, thereby placing us at a competitive disadvantage for new product designs.

While we continue to believe our QMT Division's IMOD displays will offer compelling advantages to users of displays, there can be no assurance that other technologies will not continue to improve in ways that reduce the advantages we anticipate from our IMOD displays. Sales of flat panel displays are currently, and we believe will likely continue to be for some time, dominated by displays based on liquid crystal display (LCD) technology. Numerous companies are making substantial investments in, and conducting research to improve characteristics of LCDs. Additionally, several other flat panel display technologies have been, or are being, developed, including technologies for the production of organic light-emitting diode (OLED), field emission, inorganic electroluminescence, gas plasma and vacuum fluorescent displays. In each case, advances in LCD or other flat panel display technologies could result in technologies that are more cost effective, have fewer display limitations, or can be brought to market faster than our IMOD technology. These advances in competing technologies might cause display manufacturers to avoid entering into commercial relationships with us, or not renew planned or existing relationships with us. Our QMT Division had \$212 million in assets (including \$128 million in goodwill) at March 30, 2008. If we are not successful in bringing our IMOD display technology to market, our assets may become impaired, which could negatively impact our operating results.

Successful attempts by certain companies to amend or modify Standards Development Organizations (SDOs) and other industry forums' intellectual property policies could impact our licensing business.

Some companies have proposed significant changes to existing intellectual property policies for implementation by SDOs and other industry organizations, some of which would require a maximum aggregate intellectual property royalty rate for the use of all essential patents owned by all of the member companies to be applied to the selling price of any product implementing the relevant standard. They have further proposed that such maximum aggregate royalty rate be apportioned to each member company with essential patents based upon the size of its essential patent portfolio. Seven companies (Nokia, Nokia-Siemens, NEC, Ericsson, SonyEricsson, Alcatel-Lucent, and Nextwave) recently issued a press release announcing their commitment to the principles described above with respect to the licensing of patents essential to LTE and inviting all other industry participants to join them in adopting such policies. Although the European Telecommunications Standards Institute (ETSI) ad hoc IPR group and the Next Generation

Mobile Network industry group have thus far determined that such proposals should not be adopted as amendments to existing ETSI policies or new policies, and no other companies have joined these seven companies, such proposals as described above might be revisited within ETSI and might be adopted by other SDOs or industry groups, formal and/or informal, resulting in a potential disadvantage to our business model either by limiting our return on investment with respect to new technologies or forcing us to work outside of the SDOs or such other industry groups for promoting our new technologies.

Table of Contents

We depend upon a limited number of third-party suppliers to manufacture component parts, subassemblies and finished goods for our products. If these third-party suppliers do not allocate adequate manufacturing capacity in their facilities to manufacture products on our behalf, or if there are any disruptions in the operations of, or the loss of, any of these third parties, it could harm our ability to meet our delivery obligations to our customers, reduce our revenues, increase our cost of sales and harm our business.

Our ability to meet customer demand depends, in part, on available manufacturing capacity and our ability to obtain timely and adequate delivery of parts and components from our suppliers. A reduction or interruption in our product supply source, an inability of our suppliers to react to shifts in product demand or an increase in component prices could have a material adverse effect on our business or profitability. Component shortages could adversely affect our ability and that of our customers to ship products on a timely basis and, as a result, our customers' demand for our products. Any such shipment delays or declines in demand could reduce our revenues and harm our ability to achieve or sustain desired levels of profitability. Additionally, failure to meet customer demand in a timely manner could damage our reputation and harm our customer relationships. Our operations may also be harmed by lengthy or recurring disruptions at any of our suppliers manufacturing facilities and by disruptions in the distribution channels from our suppliers and to our customers. Any such disruptions could cause significant delays in shipments until we are able to shift the products from an affected manufacturer to another manufacturer. If the affected supplier was a sole source supplier, we may not be able to obtain the product without significant cost and delay. The loss of a significant third-party supplier or the inability of a third-party supplier to meet performance and quality specifications or delivery schedules could harm our ability to meet our delivery obligations to our customers and negatively impact our revenues and business operations.

QCT Segment. A supplier's ability to meet our product manufacturing demand is limited mainly by their overall capacity and current capacity availability. Although we have entered into long-term contracts with our suppliers, most of these contracts do not provide for long-term capacity commitments. To the extent that we do not have firm commitments from our suppliers over a specific time period, or in any specific quantity, our suppliers may allocate, and in the past have allocated, capacity to the production and testing of products for their other customers while reducing capacity to manufacture our products. Accordingly, capacity for our products may not be available when we need it or available at reasonable prices. We have experienced capacity limitations from our suppliers, which resulted in supply constraints and our inability to meet certain customer demand. There can be no assurance that we will not experience these or other supply constraints in the future, which could result in our failure to meet customer demand.

While our goal is to establish alternate suppliers for technologies that we consider critical, some of our integrated circuits products are only available from single sources, with which we do not have long-term capacity commitments. Our reliance on sole or limited-source suppliers involves significant risks including possible shortages of manufacturing capacity, poor product performance and reduced control over delivery schedules, manufacturing capability and yields, quality assurance, quantity and costs. In addition, the timely readiness of our foundry suppliers to support transitions to smaller geometry process technologies could impact our ability to meet customer demand, revenues and cost expectations. The timing of acceptance of the smaller technology designs by our customers may subject us to the risk of excess inventories of earlier designs.

In the event of a loss of, or a decision to change a key third-party supplier, qualifying a new foundry supplier and commencing volume production or testing could involve delay and expense, resulting in lost revenues, reduced operating margins and possible loss of customers. We work closely with our customers to expedite their processes for evaluating new integrated circuits from our foundry suppliers; however, in some instances, transition of integrated circuit production to a new foundry supplier may cause a temporary decline in shipments of specific integrated circuits to individual customers.

QMT Division. QMT needs to form and maintain reliable business relationships with flat panel display manufacturers or other targeted partners to support the manufacture of IMOD displays in commercial volumes. All of our current relationships have been for the development and limited production of certain IMOD display panels and/or modules. Some or all of these relationships may not succeed or, even if they are successful, may not result in the display manufacturers entering into material supply relationships with us.

Table of Contents

We have expanded our QCT segment's manufacturing model to include the purchase of completed die from semiconductor manufacturing foundries and to contract directly with third-party manufacturers for assembly and test services. This new production model may increase costs and lower our control over the manufacturing process.

To further enable flexibility of supply and access to potential new foundry suppliers, and in response to the complexity of our product roadmap, starting in fiscal 2005, we expanded our manufacturing model to include purchasing completed die directly from semiconductor manufacturing foundries. Under our Integrated Fabless Manufacturing (IFM) model, we contract directly with third-party manufacturers for back-end assembly and test services, and we ship the completed integrated circuits to our customers. We expect to increase the volume of our purchases of completed die directly from our foundry suppliers under our IFM model as we source new products and convert existing turnkey production to our IFM model. We are unable to directly control the services provided by our semiconductor assembly and test (SAT) suppliers, including the timely procurement of packaging materials for our products, availability of assembly and test capacity, quality assurance and product delivery schedules. We have a limited history of working with the SAT suppliers under this expanded manufacturing model, and cannot guarantee that this change and our lack of control will not cause disruptions in our operations that could harm our ability to meet our delivery obligations to our customers, reduce our revenues, or increase our cost of sales.

Our suppliers may also be our competitors putting us at a disadvantage for pricing and capacity allocation.

One or more of our suppliers may obtain licenses from us to manufacture CDMA-based integrated circuits that compete with our products. In this event, the supplier could elect to allocate raw materials and manufacturing capacity to their own products and reduce deliveries to us to our detriment. In addition, we may not receive reasonable pricing, manufacturing or delivery terms. We cannot guarantee that the actions of our suppliers will not cause disruptions in our operations that could harm our ability to meet our delivery obligations to our customers or increase our cost of sales.

We, and our licensees, are subject to the risks of conducting business outside the United States.

A significant part of our strategy involves our continued pursuit of growth opportunities in a number of international market locations. We market, sell and service our products internationally. We have established sales offices around the world. We expect to continue to expand our international sales operations and to sell products in additional countries and locations. This expansion will require significant management attention and financial resources to successfully develop direct and indirect international sales and support channels, and we cannot assure you that we will be successful or that our expenditures in this effort will not exceed the amount of any resulting revenues. If we are not able to maintain or increase international market demand for our products and technologies, we may not be able to maintain a desired rate of growth in our business.

Our international customers sell their products to markets throughout the world, including China, India, Japan, South Korea, North America, South America and Europe. We distinguish revenues from external customers by geographic areas based on the location to which our products, software or services are delivered and, for QTL's licensing and royalty revenues, the invoiced address of our licensees. Consolidated revenues from international customers as a percentage of total revenues were 90% and 86% in the first six months of fiscal 2008 and 2007, respectively, and 87% in fiscal 2007 and 2006. Because most of our foreign sales are denominated in U.S. dollars, our products and those of our customers and licensees that are sold in U.S. dollars become less price-competitive in international markets if the value of the U.S. dollar increases relative to foreign currencies, and our revenues may not grow as quickly as they otherwise might in response to worldwide growth in wireless products and services.

In many international markets, barriers to entry are created by long-standing relationships between our potential customers and their local service providers and protective regulations, including local content and service requirements. In addition, our pursuit of international growth opportunities may require significant investments for an extended period before we realize returns, if any, on our investments. Our business could be adversely affected by a variety of uncontrollable and changing factors, including:

difficulty in protecting or enforcing our intellectual property rights and/or contracts in a particular foreign jurisdiction, including challenges to our licensing practices under such jurisdictions' competition laws;

challenges pending before foreign competition agencies to the pricing of and integration of additional features and functionality into our wireless chipset products;

Table of Contents

our inability to succeed in significant foreign countries, such as China, India or Europe;

cultural differences in the conduct of business;

difficulty in attracting qualified personnel and managing foreign activities;

longer payment cycles for and greater difficulties collecting accounts receivable;

export controls, tariffs and other trade protection measures;

nationalization, expropriation and limitations on repatriation of cash;

social, economic and political instability;

natural disasters, acts of terrorism, widespread illness and war;

taxation;

variability in the value of the dollar against foreign currency; and

changes in laws and policies affecting trade, foreign investments, licensing practices, loans and employment.

We cannot be certain that the laws and policies of any country with respect to intellectual property enforcement or licensing, issuance of wireless licenses or the adoption of standards will not be changed or enforced in a way detrimental to our licensing program or to the sale or use of our products or technology.

The wireless markets in China and India, among others, represent growth opportunities for us. If wireless operators in China or India, or the governments of China or India, make technology deployment or other decisions that result in actions that are adverse to the expansion of CDMA technologies, our business could be harmed.

We are subject to risks in certain global markets in which wireless operators provide subsidies on wireless device sales to their customers. Increases in device prices that negatively impact device sales can result from changes in regulatory policies related to device subsidies. Limitations or changes in policy on device subsidies in South Korea, Japan, China and other countries may have additional negative impacts on our revenues.

Global economic conditions that impact the wireless communications industry could negatively affect our revenues and operating results.

Global economic conditions can have wide-ranging effects on demand and prices for our products and for the products of our customers, particularly wireless communications equipment manufacturers or other members of the wireless industry, such as wireless network operators. We cannot predict negative events, such as war, that may have adverse effects on the economy or on wireless device inventories at CDMA-based equipment manufacturers and operators. The continued threat of terrorism and heightened security and military action in response to this threat, or any future acts of terrorism, may cause disruptions to the global economy and to the wireless communications industry and create uncertainties. Recent reports suggest that inflation could have adverse effects on the global economy and capital markets. Inflation and/or deflation and economic recessions could adversely affect our customers, including their ability to obtain financing, upgrade wireless networks and purchase our products and services, and our end consumers, by lowering their standards of living and diminishing their ability to purchase wireless devices based on our technology. Inflation could also increase our costs of raw materials and operating expenses and harm our business in other ways. During the first six months of fiscal 2008, 73% of our revenues were from customers and licensees based in South Korea, China and Japan, as compared to 69% during the first six months of fiscal 2007, respectively. During fiscal 2007, 69% of our revenues were from customers and licensees based in South Korea, Japan and China, as compared to 70% during fiscal 2006. These customers sell their products to markets worldwide, including in Japan, South Korea, China, India, North America, South America and Europe. A significant

downturn in the economies of Asian countries where many of our customers and licensees are located, particularly the economies of South Korea, Japan and China, or the economies of the major markets they serve would materially harm our business. Should such negative events occur, subsequent economic recovery might not benefit us in the near term. If it does not, our ability to increase or maintain our revenues and operating results may be impaired. In addition, because we intend to continue to make significant investments in research and development and to maintain extensive ongoing customer service and support capability, any decline in the rate of growth of our revenues will have a significant adverse impact on our operating results.

Table of Contents

Currency fluctuations could negatively affect future product sales or royalty revenues, harm our ability to collect receivables, or increase the U.S. dollar cost of the activities of our foreign subsidiaries and international strategic investments.

We are exposed to risk from fluctuations in currencies, which may change over time as our business practices evolve, that could impact our operating results, liquidity and financial condition. We operate and invest globally. Adverse movements in currency exchange rates may negatively affect our business due to a number of situations, including the following:

If the effective price of products sold by our customers were to increase as a result of fluctuations in the exchange rate of the relevant currencies, demand for the products could fall, which in turn would reduce our royalty and chipset revenues.

Declines in currency values in selected regions may adversely affect our operating results because our products and those of our customers and licensees may become more expensive to purchase in the countries of the affected currencies.

Assets or liabilities of our consolidated subsidiaries and our foreign investees that are not denominated in the functional currency of those entities are subject to the effects of currency fluctuations, which may affect our reported earnings. Our exposure to foreign currencies may increase as we expand into new markets.

Investments in our consolidated foreign subsidiaries and in other foreign entities that use the local currency as the functional currency may decline in value as a result of declines in local currency values.

Certain of our revenues, such as royalty revenues, are derived from licensee or customer sales that are denominated in foreign currencies. If these revenues are not subject to foreign exchange hedging transactions, weakening of currency values in selected regions could adversely affect our near term revenues and cash flows. In addition, continued weakening of currency values in selected regions over an extended period of time could adversely affect our future revenues and cash flows.

We may engage in foreign exchange hedging transactions that could affect our cash flows and earnings because they may require the payment of structuring fees, and they may limit the U.S. dollar value of royalties from licensees' sales that are denominated in foreign currencies.

Our trade receivables are generally U.S. dollar denominated. Any significant increase in the value of the dollar against our customers' or licensees' functional currencies could result in an increase in our customers' or licensees' cash flow requirements and could consequently affect our ability to sell products and collect receivables.

Strengthening of currency values in selected regions may adversely affect our operating results because the activities of our foreign subsidiaries, and the costs of procuring component parts and chipsets from foreign vendors may become more expensive in U.S. dollars.

Strengthening of currency values in selected regions may adversely affect our cash flows and investment results because strategic investment obligations denominated in foreign currencies may become more expensive, and the U.S. dollar cost of equity in losses of foreign investees may increase.

We may engage in acquisitions or strategic transactions or make investments that could result in significant changes or management disruption and fail to enhance stockholder value.

From time to time, we engage in acquisitions or strategic transactions or make investments with the goal of maximizing stockholder value. We acquire businesses, enter into joint ventures or other strategic transactions and purchase equity and debt securities, including minority interests in publicly-traded and private companies,

non-investment-grade debt securities, equity and debt mutual funds, corporate bonds/notes and mortgage/asset-backed securities. Many of our strategic investments are in CDMA wireless operators, early-stage companies, or venture funds to support our business, including the global adoption of CDMA-based technologies and related services. Most of our strategic investments entail a high degree of risk and will not become liquid until more than one year

Table of Contents

from the date of investment, if at all. Our acquisitions or strategic investments (either those we have completed or may undertake in the future) may not generate financial returns or result in increased adoption or continued use of our technologies. In addition, our other investments may not generate financial returns or may result in losses due to market volatility, the general level of interest rates and inflation expectations.

Achieving the anticipated benefits of acquisitions depends in part upon our ability to integrate the acquired businesses in an efficient and effective manner. The integration of companies that have previously operated independently may result in significant challenges, and we may be unable to accomplish the integration smoothly or successfully. The difficulties of integrating companies include, among others:

retaining key employees;

maintenance of important relationships of Qualcomm and the acquired business;

minimizing the diversion of management's attention from ongoing business matters;

coordinating geographically separate organizations;

consolidating research and development operations; and

consolidating corporate and administrative infrastructures.

We cannot assure you that the integration of acquired businesses with our business will result in the realization of the full benefits anticipated by us to result from the acquisition. We may not derive any commercial value from the acquired technology, products and intellectual property or from future technologies and products based on the acquired technology and/or intellectual property, and we may be subject to liabilities that are not covered by indemnification protection we may obtain.

Defects or errors in our products and services or in products made by our suppliers could harm our relations with our customers and expose us to liability. Similar problems related to the products of our customers or licensees could harm our business. If we experience product liability claims or recalls, we may incur significant expenses and experience decreased demand for our products.

Our products are inherently complex and may contain defects and errors that are detected only when the products are in use. For example, as our chipset product complexities increase, we are required to migrate to integrated circuit technologies with smaller geometric feature sizes. The design process interface issues are more complex as we enter into these new domains of technology, which adds risk to yields and reliability. Because our products and services are responsible for critical functions in our customers' products and/or networks, such defects or errors could have a serious impact on our customers, which could damage our reputation, harm our customer relationships and expose us to liability. Defects or impurities in our components, materials or software or those used by our customers or licensees, equipment failures or other difficulties could adversely affect our ability and that of our customers and licensees to ship products on a timely basis as well as customer or licensee demand for our products. Any such shipment delays or declines in demand could reduce our revenues and harm our ability to achieve or sustain desired levels of profitability. We and our customers or licensees may also experience component or software failures or defects that could require significant product recalls, reworks and/or repairs that are not covered by warranty reserves and which could consume a substantial portion of the capacity of our third-party manufacturers or those of our customers or licensees. Resolving any defect or failure related issues could consume financial and/or engineering resources that could affect future product release schedules. Additionally, a defect or failure in our products or the products of our customers or licensees could harm our reputation and/or adversely affect the growth of 3G wireless markets.

Testing, manufacturing, marketing and use of our products and those of our licensees and customers entail the risk of product liability. The use of wireless devices containing our products to access untrusted content creates a risk of exposing the system software in those devices to viral or malicious attacks. We continue to expand our focus on this issue and take measures to safeguard the software from this threat. However, this issue carries the risk of general

product liability claims along with the associated impacts on reputation and demand. Although we carry product liability insurance to protect against product liability claims, we cannot assure you that our insurance coverage will be sufficient to protect us against losses due to product liability claims, or that we will be able to continue to maintain such insurance at a reasonable cost. Furthermore, not all losses associated with alleged product

Table of Contents

failure are insurable. Our inability to maintain insurance at an acceptable cost or to protect ourselves in other ways against potential product liability claims could prevent or inhibit the commercialization of our products and those of our licensees and customers and harm our future operating results. In addition, a product liability claim or recall, whether against our licensees, customers, or us could harm our reputation and result in decreased demand for our products.

MediaFLO does not fully control promotional activities necessary to stimulate demand for our services.

Our MediaFLO business is a wholesale provider of mobile entertainment and information services to our operator partners. As such, we do not set the retail price of our service to the consumer, nor do we directly control the marketing and promotion of the service to the operator's subscriber base. Therefore, we are dependent upon our operator partners to price, market and otherwise promote our services to the end users. If our operator partners do not effectively price, market and otherwise promote the service to their subscriber base, our ability to achieve the subscriber and revenue targets contemplated in our business plan will be negatively impacted.

Consumer acceptance and adoption of our MediaFLO technology and mobile commerce applications will have a considerable impact on the success of our MediaFLO and Firethorn businesses, respectively.

Customer acceptance of the services our MediaFLO and Firethorn businesses offer is, and will continue to be, affected by technology-based differences and by the operational performance, quality, reliability and coverage of our wireless network and services platforms. Consumer demand could be impacted by differences in technology, coverage and service areas, network quality, consumer perceptions, program and service offerings and rate plans. Our operator and financial services partners may have difficulty retaining subscribers if we are unable to meet subscriber expectations for network quality and coverage, customer care, content or security. Obtaining content that is appealing to subscribers on economically rational terms may be limited by our content provider partners' inability to obtain the mobile rights to such programming. An inability to address these issues could limit our ability to expand our subscriber base and place us at a competitive disadvantage. Additionally, adoption and deployment of our MediaFLO technology could be adversely impacted by government regulatory practices that support a single standard other than our technology, operator selection of competing technologies or consumer preferences.

Our business and operating results will be harmed if we are unable to manage growth in our business.

Certain of our businesses have experienced periods of rapid growth and/or increased their international activities, placing significant demands on our managerial, operational and financial resources. In order to manage growth and geographic expansion, we must continue to improve and develop our management, operational and financial systems and controls, including quality control and delivery and service capabilities. We also need to continue to expand, train and manage our employee base. We must carefully manage research and development capabilities and production and inventory levels to meet product demand, new product introductions and product and technology transitions. We cannot assure you that we will be able to timely and effectively meet that demand and maintain the quality standards required by our existing and potential customers and licensees.

In addition, inaccuracies in our demand forecasts, or failure of the systems used to develop the forecasts, could quickly result in either insufficient or excessive inventories and disproportionate overhead expenses. If we ineffectively manage our growth or are unsuccessful in recruiting and retaining personnel, our business and operating results will be harmed.

Our operating results are subject to substantial quarterly and annual fluctuations and to market downturns.

Our revenues, earnings and other operating results have fluctuated significantly in the past and may fluctuate significantly in the future. General economic or other conditions causing a downturn in the market for our products or technology, and in turn affecting the timing of customer orders or causing cancellations or rescheduling of orders, could also adversely affect our operating results. Moreover, our customers may change delivery schedules, cancel or reduce orders without incurring significant penalties and generally are not subject to minimum purchase requirements.

Our future operating results will be affected by many factors, including, but not limited to: our ability to retain existing or secure anticipated customers or licensees, both domestically and internationally; our ability to develop, introduce and market new technology, products and services on a timely basis; management of inventory by us and our customers and their customers in response to shifts in market demand; changes in the mix of technology and products developed, licensed, produced and sold; seasonal customer demand; and other factors described elsewhere in

this Quarterly Report and in these risk factors. Our cash investments represent a significant asset that may be subject to fluctuating or even negative returns depending upon interest rate movements and financial market conditions in fixed income and equity securities.

Table of Contents

These factors affecting our future operating results are difficult to forecast and could harm our quarterly and/or annual operating results. If our operating results fail to meet the financial guidance we provide to investors, or the expectations of investment analysts or investors in any period, securities class action litigation could be brought against us and/or the market price of our common stock could decline.

Our stock price may be volatile.

The stock market in general, and the stock prices of technology-based and wireless communications companies in particular, have experienced volatility that often has been unrelated to the operating performance of any specific public company. The market price of our common stock has fluctuated in the past and is likely to fluctuate in the future as well. Factors that may have a significant impact on the market price of our stock include:

announcements concerning us or our competitors, including the selection of wireless communications technology by wireless operators and the timing of the roll-out of those systems;

court or regulatory body decisions or settlements regarding intellectual property licensing and patent litigation and arbitration;

receipt of substantial orders or order cancellations for integrated circuits and system software products;

quality deficiencies in services or products;

announcements regarding financial developments or technological innovations;

international developments, such as technology mandates, political developments or changes in economic policies;

lack of capital to invest in 3G networks;

new commercial products;

changes in recommendations of securities analysts;

general stock market volatility;

government regulations, including share-based compensation accounting and tax regulations;

energy blackouts;

acts of terrorism and war;

inflation and deflation;

widespread illness;

proprietary rights or product or patent litigation against us or against our customers or licensees;

strategic transactions, such as spin-offs, acquisitions and divestitures; or

rumors or allegations regarding our financial disclosures or practices.

Our future earnings and stock price may be subject to volatility, particularly on a quarterly basis. Shortfalls in our revenues or earnings in any given period relative to the levels expected by securities analysts could immediately,

significantly and adversely affect the trading price of our common stock.

In the past, securities class action litigation often has been brought against a company following periods of volatility in the market price of its securities. Due to changes in the volatility of our stock price, we may be the target of securities litigation in the future. Securities and patent litigation could result in substantial uninsured costs and divert management's attention and resources. In addition, stock price volatility may be precipitated by failure to meet earnings expectations or other factors, such as the potential uncertainty in future reported earnings created by the assumptions used for share-based compensation and the related valuation models used to determine such expense.

Table of Contents

Our industry is subject to rapid technological change, and we must make substantial investments in new products and technologies to compete successfully.

New technological innovations generally require a substantial investment before they are commercially viable. We intend to continue to make substantial investments in developing new products and technologies, and it is possible that our development efforts will not be successful and that our new technologies will not result in meaningful revenues. In particular, we intend to continue to invest significant resources in developing integrated circuit products to support high-speed wireless internet access and multimode, multiband, multinet network operation and multimedia applications, which encompass development of graphical display, camera and video capabilities, as well as higher computational capability and lower power on-chip computers and signal processors. We also continue to invest in the development of our BREW applications development platform, our MediaFLO MDS and FLO technology and our IMOD display technology. All of these new products and technologies face significant competition, and we cannot assure you that the revenues generated from these products or the timing of the deployment of these products or technologies, which may be dependent on the actions of others, will meet our expectations. We cannot be certain that we will make the additional advances in development that may be essential to commercialize our IMOD technology successfully.

The market for our wireless products and technology is characterized by many factors, including:

rapid technological advances and evolving industry standards;

changes in customer requirements and consumer expectations;

frequent introductions of new products and enhancements;

evolving methods for transmission of wireless voice and data communications; and

intense competition from companies with greater resources, customer relationships and distribution capabilities.

Our future success will depend on our ability to continue to develop and introduce new products, technology and enhancements on a timely basis. Our future success will also depend on our ability to keep pace with technological developments, protect our intellectual property, satisfy customer requirements, price our products competitively and achieve market acceptance. The introduction of products embodying new technologies and the emergence of new industry standards could render our existing products and technology, and products and technology currently under development, obsolete and unmarketable. If we fail to anticipate or respond adequately to technological developments or customer requirements, or experience any significant delays in development, introduction or shipment of our products and technology in commercial quantities, demand for our products and our customers' and licensees' products that use our technology could decrease, and our competitive position could be damaged.

Changes in assumptions used to estimate the values of share-based compensation have a significant effect on our reported results.

We are required to estimate and record compensation expense in the statement of operations for share-based payments, such as employee stock options, using the fair value method. This method has a significant effect on our reported earnings, although it will not affect our cash flows, and could adversely impact our ability to provide accurate guidance on our future reported financial results due to the variability of the factors used to estimate the values of share-based payments. If factors change and/or we employ different assumptions or different valuation methods in future periods, the compensation expense that we record may differ significantly from amounts recorded previously, which could negatively affect our stock price and our stock price volatility.

The accounting guidance for share-based compensation is relatively new, and best practices are not well established. The application of these principles may be subject to further interpretation and refinement over time. There are significant differences among valuation models, and there is a possibility that we will adopt different valuation models in the future. This may result in a lack of consistency in future periods and materially affect the fair value estimate of share-based payments. It may also result in a lack of comparability with other companies that use different models, methods and assumptions.

Table of Contents

Theoretical valuation models and market-based methods are evolving and may result in lower or higher fair value estimates for share-based compensation. The timing, readiness, adoption, general acceptance, reliability and testing of these methods is uncertain. Sophisticated mathematical models may require voluminous historical information, modeling expertise, financial analyses, correlation analyses, integrated software and databases, consulting fees, customization and testing for adequacy of internal controls. Market-based methods are emerging that, if employed by us, may dilute our earnings per share and involve significant transaction fees and ongoing administrative expenses. The uncertainties and costs of these extensive valuation efforts may outweigh the benefits to our investors.

Potential tax liabilities could adversely affect our results.

We are subject to income taxes in both the United States and numerous foreign jurisdictions. Significant judgment is required in determining our provision for income taxes. Although we believe our tax estimates are reasonable, the final determination of tax audits and any related litigation could be materially different than that which is reflected in historical income tax provisions and accruals. In such case, a material effect on our income tax provision and net income in the period or periods in which that determination is made could result. In addition, tax rules may change that may adversely affect our future reported financial results or the way we conduct our business. For example, we consider the operating earnings of certain non-United States subsidiaries to be invested indefinitely outside the United States based on estimates that future domestic cash generation will be sufficient to meet future domestic cash needs. No provision has been made for United States federal and state or foreign taxes that may result from future remittances of undistributed earnings of foreign subsidiaries. Our future reported financial results may be adversely affected if tax or accounting rules regarding unrepatriated earnings change or if domestic cash needs require us to repatriate foreign earnings.

The high amount of capital required to obtain radio frequency licenses, deploy and expand wireless networks and obtain new subscribers could slow the growth of the wireless communications industry and adversely affect our business.

Our growth is dependent upon the increased use of wireless communications services that utilize our technology. In order to provide wireless communications services, wireless operators must obtain rights to use specific radio frequencies. The allocation of frequencies is regulated in the United States and other countries throughout the world, and limited spectrum space is allocated to wireless communications services. Industry growth may be affected by the amount of capital required to: obtain licenses to use new frequencies; deploy wireless networks to offer voice and data services; expand wireless networks to grow voice and data services; and obtain new subscribers. The significant cost of licenses, wireless networks and subscriber additions may slow the growth of the industry if wireless operators are unable to obtain or service the additional capital necessary to implement or expand 3G wireless networks. Our growth could be adversely affected if this occurs.

If wireless devices are perceived to pose safety risks, we may be subject to new regulations, and demand for our products and those of our licensees and customers may decrease.

Concerns over the effects of radio frequency emissions, even if unfounded, may have the effect of discouraging the use of wireless devices, which may decrease demand for our products and those of our licensees and customers. In recent years, the FCC and foreign regulatory agencies have updated the guidelines and methods they use for evaluating radio frequency emissions from radio equipment, including wireless phones and other wireless devices. In addition, interest groups have requested that the FCC investigate claims that wireless communications technologies pose health concerns and cause interference with airbags, hearing aids and medical devices. Concerns have also been expressed over the possibility of safety risks due to a lack of attention associated with the use of wireless devices while driving. Any legislation that may be adopted in response to these expressions of concern could reduce demand for our products and those of our licensees and customers in the United States as well as foreign countries.

Our QES and MediaFLO businesses depend on the availability of satellite and other networks.

Our OmniTRACS and OmniVision systems operate on leased Ku-band satellite transponders in the United States, Mexico and Europe. Our primary data satellite transponder and position reporting satellite transponder lease for the system in the United States runs through October 2012 and includes transponder and satellite protection (back-up capacity in the event of a transponder or satellite failure). The transponder lease for the system in Mexico runs through April 2010 and does not currently have back-up capability. Our agreement with a third-party to

Table of Contents

provide network and satellite services (including procuring satellite space) in Europe expires in September 2012. We believe our agreements will provide sufficient transponder capacity for our OmniTRACS and OmniVision operations through the expiration dates. A failure to maintain adequate satellite capacity could harm our business, operating results, liquidity and financial position. QES terrestrial-based products rely on wireless terrestrial communication networks operated by third parties. The unavailability or nonperformance of these network systems could harm our business. The products and services that we sell for use on Globalstar Inc.'s (Globalstar) low-Earth-orbit satellite network are dependent on the availability and performance of the Globalstar satellite system. On February 6, 2007, Globalstar announced that many Globalstar satellites are experiencing an anomaly resulting in degraded performance of the amplifiers for the S-band satellite communications antenna. Globalstar stated that unless remedied, by some time in 2008, this degradation or degraded performance will have a significant adverse impact on Globalstar's ability to provide uninterrupted two-way voice and data services on a continuous basis in any given location. On May 30, 2007, Globalstar announced that four Globalstar satellites were successfully launched, and on October 22, 2007, Globalstar announced the successful launch of four additional satellites. Globalstar stated that it believes the additional satellites will augment the current operating constellation and improve two-way voice and data services until the launch of the second-generation satellite constellation, which is scheduled to begin in the summer of 2009. If the recent launch of the satellites does not remedy the problem or if Globalstar is unable to launch a second-generation satellite constellation, this degraded performance will have an adverse impact on sales of our products and services that rely on the Globalstar network.

Our MediaFLO network and systems currently operate in the United States market on a leased Ku-band satellite transponder. Our primary program content and data distribution satellite transponder lease runs through December 31, 2012 and includes transponder and satellite protection (back-up capacity in the event of a transponder or satellite failure), which we believe will provide sufficient transponder capacity for our domestic United States MediaFLO services through fiscal 2012. Additionally, our MediaFLO Transmitter Sites are monitored and controlled by a variety of terrestrial-based data circuits relying on various terrestrial and satellite communication networks operated by third parties. A failure to maintain adequate satellite capacity or the unavailability or nonperformance of the terrestrial-based network systems could have an adverse effect on our business and operating results. *Our business and operations would suffer in the event of system failures.*

Despite system redundancy, the implementation of security measures and the existence of a Disaster Recovery Plan for our internal information technology networking systems, our systems are vulnerable to damages from computer viruses, unauthorized access, energy blackouts, natural disasters, terrorism, war and telecommunication failures. Any system failure, accident or security breach that causes interruptions in our operations or to our customers' or licensees' operations could result in a material disruption to our business. To the extent that any disruption or security breach results in a loss or damage to our customers' data or applications, or inappropriate disclosure of confidential information, we may incur liability as a result. In addition, we may incur additional costs to remedy the damages caused by these disruptions or security breaches.

Message transmissions for QES operations are formatted and processed at the Network Management Center in San Diego, California, with a fully redundant backup Network Management Center located in Las Vegas, Nevada. Content from third parties for MediaFLO operations is received, processed and retransmitted at the Broadcast Operations Center in San Diego, California. The centers, operated by us, are subject to system failures, which could interrupt the services and have an adverse effect on our operating results.

From time to time, we install new or upgraded business management systems. To the extent such systems fail or are not properly implemented, we may experience material disruptions to our business, delays in our external financial reporting or failures in our system of internal controls, that could have a material adverse effect on our results of operations.

Noncompliance with environmental or safety regulations could cause us to incur significant expenses and harm our business.

As part of the development of our IMOD display technology, we are operating a research and development fabrication facility. The development of IMOD display prototypes is a complex and precise process involving hazardous materials subject to environmental and safety regulations. Our failure or inability to comply with existing or

future environmental and safety regulations could result in significant remediation liabilities, the imposition of fines and/or the suspension or termination of development activities.

Table of Contents

Our stock repurchase program may not result in a positive return of capital to stockholders.

At March 30, 2008, we had authority to repurchase up to \$2 billion. Our stock repurchases may not return value to stockholders because the market price of the stock may decline significantly below the levels at which we repurchased shares of stock. Our stock purchase program is intended to deliver stockholder value over the long-term, but stock price fluctuations can reduce the program's effectiveness.

As part of our stock repurchase program, we may sell put options or engage in structured derivative transactions to reduce the cost of repurchasing stock. In the event of a significant and unexpected drop in stock price, these arrangements may require us to repurchase stock at price levels that are significantly above the then-prevailing market price of our stock. Such overpayments may have an adverse effect on the effectiveness of our overall stock repurchase program and may reduce value for our stockholders.

We cannot provide assurance that we will continue to declare dividends at all or in any particular amounts.

We intend to continue to pay quarterly dividends subject to capital availability and periodic determinations that cash dividends are in the best interest of our stockholders. Future dividends may be affected by, among other items, our views on potential future capital requirements, including those related to research and development, creation and expansion of sales distribution channels and investments and acquisitions, legal risks, stock repurchase programs, changes in federal income tax law and changes to our business model. Our dividend payments may change from time to time, and we cannot provide assurance that we will continue to declare dividends at all or in any particular amounts. A reduction in our dividend payments could have a negative effect on our stock price.

Government regulation and policies of industry standards bodies may adversely affect our business.

Our products and services and those of our customers and licensees are subject to various regulations, including FCC regulations in the United States and other international regulations, as well as the specifications of national, regional and international standards bodies. Changes in the regulation of our activities, including changes in the allocation of available spectrum by the United States government and other governments or exclusion or limitation of our technology or products by a government or standards body, could have a material adverse effect on our business, operating results, liquidity and financial position.

We hold licenses in the United States from the FCC for the spectrum referred to as Block D in the Lower 700 MHz Band (also known as TV Channel 55), covering the entire nation for use in our MediaFLO business. As a result, we are regulated by the FCC pursuant to Part 27 of the FCC's rules, which are subject to a variety of ongoing FCC proceedings. It is impossible to predict with certainty the outcome of pending FCC or other federal or state regulatory proceedings relating to our MediaFLO service or our use of the spectrum for which we hold licenses. Unless we are able to obtain relief, existing laws and regulations may inhibit our ability to expand our business and to introduce new products and services. In addition, the adoption of new laws or regulations or changes to the existing regulatory framework could adversely affect our business plans.

We may not be able to attract and retain qualified employees.

Our future success depends largely upon the continued service of our board members, executive officers and other key management and technical personnel. Our success also depends on our ability to continue to attract, retain and motivate qualified personnel. In addition, implementing our product and business strategy requires specialized engineering and other talent, and our revenues are highly dependent on technological and product innovations. The market for such specialized engineering and other talented employees in our industry is extremely competitive. In addition, existing immigration laws make it more difficult for us to recruit and retain highly skilled foreign national graduates of U.S. universities, making the pool of available talent even smaller. Key employees represent a significant asset, and the competition for these employees is intense in the wireless communications industry. In the event of a labor shortage, or in the event of an unfavorable change in prevailing labor and/or immigration laws, we could experience difficulty attracting and retaining qualified employees. We continue to anticipate increases in human resources, particularly in engineering, through fiscal 2008. If we are unable to attract and retain the qualified employees that we need, our business may be harmed.

We may have particular difficulty attracting and retaining key personnel in periods of poor operating performance given the significant use of incentive compensation by our competitors. We do not have employment agreements with our key management personnel and do not maintain key person life insurance on any of our personnel. To the extent

that new regulations make it less attractive to grant options to employees or if stockholders do not authorize shares for the continuation of equity compensation programs in the future, we may incur increased compensation costs, change our equity compensation strategy or find it difficult to attract, retain and motivate employees, each of which could materially and adversely affect our business.

Table of Contents

Compliance with changing regulation of corporate governance and public disclosure may result in additional expenses.

Changing laws, regulations and standards relating to corporate governance and public disclosure may create uncertainty regarding compliance matters. New or changed laws, regulations and standards are subject to varying interpretations in many cases. As a result, their application in practice may evolve over time. We are committed to maintaining high standards of corporate governance and public disclosure. Complying with evolving interpretations of new or changed legal requirements may cause us to incur higher costs as we revise current practices, policies and procedures, and may divert management time and attention from revenue generating to compliance activities. If our efforts to comply with new or changed laws, regulations and standards differ from the activities intended by regulatory or governing bodies due to ambiguities related to practice, our reputation might also be harmed. In addition, it has become more difficult and more expensive for us to obtain director and officer liability insurance, and we have purchased reduced coverage at substantially higher cost than in the past. Further, our board members, chief executive officer and chief financial officer could face an increased risk of personal liability in connection with the performance of their duties. As a result, we may have difficulty attracting and retaining qualified board members and executive officers, which could harm our business.

Our charter documents and Delaware law could limit transactions in which stockholders might obtain a premium over current market prices.

Our certificate of incorporation includes a provision that requires the approval of holders of at least 66 2/3% of our voting stock as a condition to certain mergers or other business transactions with, or proposed by, a holder of 15% or more of our voting stock. Under our charter documents, stockholders are not permitted to call special meetings of our stockholders or to act by written consent. These charter provisions may discourage certain types of transactions involving an actual or potential change in our control, including those offering stockholders a premium over current market prices. These provisions may also limit our stockholders' ability to approve transactions that they may deem to be in their best interests.

Further, our Board of Directors has the authority under Delaware law to fix the rights and preferences of and issue shares of preferred stock, and our preferred share purchase rights agreement will cause substantial dilution to the ownership of a person or group that attempts to acquire us on terms not approved by our Board of Directors. While our Board of Directors approved our preferred share purchase rights agreement to provide the board with greater ability to maximize shareholder value, these rights could deter takeover attempts that the board finds inadequate and make it more difficult to bring about a change in our ownership.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Financial market risks related to interest rates, foreign currency exchange rates and equity prices are described in our 2007 Annual Report on Form 10-K. At March 30, 2008, there have been no other material changes to the market risks described at September 30, 2007 except as described below. Additionally, we do not anticipate any other near-term changes in the nature of our market risk exposures or in management's objectives and strategies with respect to managing such exposures.

Interest Rate Risk. We invest our cash in a number of diversified investment- and non-investment-grade fixed- and floating-rate securities, consisting of cash equivalents, marketable debt securities and debt mutual funds. The following table provides information about our financial instruments that are sensitive to changes in interest rates.

Table of Contents

Interest Rate Sensitivity
Principal Amount by Expected Maturity
Average Interest Rates
(Dollars in millions)

	2008	2009	2010	2011	2012	Thereafter	No Single Maturity	Total
Fixed interest-bearing securities:								
Cash equivalents	\$ 203	\$	\$	\$	\$	\$	\$	\$ 203
Interest rate	2.5%							
Available-for-sale securities:								
Investment grade	\$ 691	\$264	\$277	\$136	\$ 61	\$ 48	\$187	\$1,664
Interest rate	4.7%	5.3%	3.7%	4.6%	4.8%	7.5%	5.7%	
Non-investment grade	\$ 2	\$ 24	\$ 25	\$ 53	\$ 67	\$602	\$	\$ 773
Interest rate	8.5%	8.2%	7.2%	9.3%	7.8%	9.1%		
Floating interest-bearing securities:								
Cash equivalents	\$2,472	\$	\$	\$	\$	\$	\$	\$2,472
Interest rate	3.5%							
Available-for-sale securities:								
Investment grade	\$ 157	\$346	\$303	\$ 50	\$ 71	\$ 90	\$708	\$1,725
Interest rate	3.0%	3.5%	3.4%	3.3%	3.5%	4.3%	4.6%	
Non-investment grade	\$ 9	\$ 9	\$ 27	\$ 61	\$100	\$384	\$681	\$1,271
Interest rate	5.5%	6.2%	7.1%	7.4%	7.4%	7.4%	7.1%	

Cash equivalents and available-for-sale securities are recorded at fair value.

Credit Market Risk. Since September 30, 2007, there has been a major disruption in U.S. credit markets due to rising concerns about the sub-prime mortgage market, its effects on consumers and the banking, finance and housing industries and the potential for an economic recession. The result has been depressed security values in most types of investment- and non-investment-grade bonds and debt obligations and mortgage- and asset-backed securities, as well as the failure of the auction mechanism for certain of those asset-backed securities resulting in our inability to sell those securities in the near term. At March 30, 2008, we held a significant portion of our corporate cash in diversified portfolios of fixed- and floating-rate, investment-grade marketable securities, mortgage- and asset-backed securities, non-investment-grade bank loans and bonds, preferred stocks, equities and other securities that have been affected by these credit market concerns and have temporary unrealized losses of \$350 million. Although we consider these unrealized losses to be temporary, there is a risk that we may incur other-than-temporary impairment charges on the values of these and other similarly affected securities if U.S. credit and equity markets do not stabilize and recover to previous levels in the coming quarters.

Equity Price Risk. We have a diversified marketable securities portfolio, including mutual fund and exchange traded fund shares, that is subject to equity price risk. The recorded values of marketable equity securities were \$1.09 billion at March 30, 2008. The recorded values of equity mutual fund and exchange traded fund shares were

\$1.23 billion at March 30, 2008. We made equity investments in companies of varying size, style, industry and geography, and changes in investment allocations may affect the price volatility of our investments. A 10% decrease in the market price of our marketable equity securities and equity mutual fund and exchange traded fund shares at March 30, 2008 would cause a corresponding 10% decrease in the carrying amounts of these securities, or \$233 million.

ITEM 4. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures. Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we conducted an evaluation of our disclosure controls and procedures, as such term is defined under Rule 13a-15(e) promulgated under the Securities Exchange Act of 1934, as amended (the Exchange Act). Based on this evaluation, our principal executive officer and our principal financial officer concluded that our disclosure controls and procedures were effective as of the end of the period covered by this Quarterly Report.

Changes in Internal Control over Financial Reporting. There have been no changes in our internal control over financial reporting during the second quarter of fiscal 2008 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Table of Contents**PART II. OTHER INFORMATION****ITEM 1. LEGAL PROCEEDINGS**

A review of our current litigation is disclosed in the notes to our condensed consolidated financial statements. See Notes to Condensed Consolidated Financial Statements, Note 6 Commitments and Contingencies. We are also engaged in other legal actions arising in the ordinary course of our business and believe that the ultimate outcome of these actions will not have a material adverse effect on our results of operations, liquidity or financial position.

ITEM 1A. RISK FACTORS

We have provided updated Risk Factors in the section labeled Risk Factors in Part I, Item 2, Management's Discussion and Analysis of Financial Condition and Results of Operations. The Risk Factors section provides updated information in certain areas, but we do not believe those updates have materially changed the type or magnitude of the risks we face in comparison to the disclosure provided in our most recent Annual Report on Form 10-K.

ITEM 2. UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEEDS

Issuer purchases of equity securities during the second quarter of fiscal 2008 were (in millions, except per share data):

	Total Number of Shares Purchased	Average Price Paid Per Share⁽¹⁾	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs⁽²⁾	Approximate Dollar Value of Shares that May Yet Be Purchased Under the Plans or Programs⁽²⁾
December 31, 2007 to January 27, 2008	17.7	\$ 37.68	17.7	\$ 96
January 28, 2008 to February 24, 2008		\$		\$ 96
February 25, 2008 to March 30, 2008	2.5	\$ 45.45	2.5	\$ 2,000
Total	20.2	\$ 39.07	20.2	\$ 2,000

(1) Average Price Paid Per Share excludes cash paid for commissions. We repurchased 2.5 million shares in the second quarter of 2008 upon the exercise of an outstanding put option. A premium of

\$8 million was excluded from the average price paid per share. If the premium had been included, the average price paid per share for the purchases of shares made during the second quarter would have been \$37.65.

- (2) On March 11, 2008, we announced that we had been authorized to repurchase up to \$2.0 billion of our common stock with no expiration date. The \$2.0 billion stock repurchase program replaced a \$3.0 billion stock repurchase program, of which approximately \$2.0 million remained authorized for repurchases.

ITEM 3. DEFAULTS UPON SENIOR SECURITIES

Not applicable.

ITEM 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

Our Annual Meeting of Stockholders was held on March 11, 2008. On the record date, 1,616,285,181 shares of our common stock were entitled to vote. At the meeting, 1,435,642,319 shares were represented in person or by proxy. Three proposals were considered.

Proposal 1: Election of ten directors to hold office until the 2009 Annual Meeting:

	For	Withheld
Barbara T. Alexander	1,394,490,432	41,151,887
Donald G. Cruickshank	1,405,445,324	30,196,995

Edgar Filing: QUALCOMM INC/DE - Form 10-Q

Raymond V. Dittamore	1,396,603,898	39,038,421
Irwin Mark Jacobs	1,396,802,983	38,839,336
Paul E. Jacobs	1,399,963,713	35,678,606
Robert E. Kahn	1,400,172,839	35,469,480
Sherry Lansing	1,405,278,419	30,363,900
Duane A. Nelles	952,967,821	482,674,498
Marc I. Stern	1,389,158,385	46,483,934
Brent Scowcroft	1,387,969,256	47,673,063

All of the foregoing candidates were elected, and each received affirmative votes from more than a majority of the outstanding shares.

Table of Contents

Proposal 2: Approve amendments to the 2006 Long-Term Incentive Plan and an increase in the share reserve by 115,000,000 shares. This proposal received the following votes:

For	Against	Abstain
959,405,212	203,303,821	14,145,565
Broker Non-Vote 258,787,721		

The foregoing proposal was approved.

Proposal 3: Ratify the selection of PricewaterhouseCoopers LLP as the Company's independent public accountants for the Company's fiscal year ending September 28, 2008. This proposal received the following votes:

For	Against	Abstain
1,400,066,317	22,053,190	13,522,812

The foregoing proposal was approved.
