BENNETT Environmental Awarded Record Contract

Receives Contract To Treat Contaminated Soil Valued at \$200M Cdn.

Oakville, Ontario, June 02, 2003 BENNETT Environmental Inc., a North American leader in the high temperature treatment of contaminated soils, announces that it has been awarded a contract to treat an estimated 300,000 tons of soil contaminated with wood treatment chemicals from Phase III of the Federal Creosote Superfund Site in New Jersey. This contract, valued at \$200 million Cdn., the largest in the Company's history, is scheduled to be completed by December 31, 2005 and may be increased with the addition of subsequent phases. To date, Bennett has safely treated over 85,000 tons of material from this site.

This is the third phase of this project that the Company has won, and is testimony to the high level of professionalism, service and competitiveness that Bennett has provided on this site over the past two years said Robert Griffiths, Vice-President of US Sales and Marketing for Bennett. Shipments from three different locations on the site should start within the next few days, and continue until the completion of Phase III which is anticipated by the end of 2005. Subsequent phases may be added depending on the results of soil sampling of additional areas.

Since 2001, our Company has played a key role in the cost effective clean-up of the Federal Creosote Superfund site and I am pleased that we will continue our involvement for the next several years, said John Bennett, Chairman and Chief Executive Officer of Bennett Environmental Inc. This, together with previously announced contracts, ensures that we will have a very successful year in 2003 and beyond in terms of meeting our financial and operational goals.

Winning this contract, notes Mr. Bennett, provides a good base load of material for our proposed new soil treatment facility in Belledune, New Brunswick which is scheduled to be completed by the end of this year. In the interim, construction on our 30,000 tonne storage building at the Saint Ambroise treatment facility will be completed by the middle of June. This will give us the required storage and the capability to dry and optimally blend the soil in order to maximize the throughput.

About Bennett Environmental Inc.

Bennett Environmental Inc. is a North American leader in high temperature treatment services for the remediation of contaminated soil and has provided thermal solutions to contamination problems throughout Canada and the US. Bennett Environmental's proprietary technology provides for a safe, economical and permanent solution to contaminated soil. Independent testing has consistently proven that the technology operates well within the most stringent criteria in North America.
