**Item 7.01. Regulation FD Disclosure.**

On November 9, 2005, Terayon Communication Systems, Inc. ( Terayon ) announced the industry s first telco-optimized solution that allows telecommunication service providers to create new advertising revenue streams to support their rollout of IPTV (Internet Protocol Television) services. At the TelcoTV Conference & Expo in San Diego, California, Terayon is demonstrating how its new DM 6400-IPTV Network CherryPicker® enables telecommunication carriers to seamlessly insert local advertisements into MPEG-4/AVC encoded digital video, the format most carriers have selected for their digital video service offerings. Terayon is also demonstrating its MPEG-4/AVC ad insertion solution at this week s SMPTE (Society of Motion Picture and Television Engineers) conference in New York City. At both shows, the DM 6400-IPTV is working with Adtec Digital s DPI-1200 advertising server. Terayon is working closely with all of its ad insertion partners - Adtec, C-COR and SeaChange International to ensure product interoperability. Terayon is also working with several of the largest vendors to the telecommunication industry including Nortel - to integrate the DM 6400-IPTV as part of larger, complete digital video solutions for telecom carriers.
