NEW YORK COMMUNITY BANCORP, INC.

NOTES TO THE UNAUDITED CONSOLIDATED FINANCIAL STATEMENTS

Note 1. Organization and Basis of Presentation

Organization

Formerly known as Queens County Bancorp, Inc., New York Community Bancorp, Inc. (on a stand-alone basis, the Parent Company or, collectively with its subsidiaries, the Company) was organized under Delaware law on July 20, 1993 and is the holding company for New York Community Bank and New York Commercial Bank (hereinafter referred to as the Community Bank and the Commercial Bank, respectively, and collectively as the Banks). In addition, for the purpose of these Consolidated Financial Statements, the Community Bank and the Commercial Bank refer not only to the respective banks but also to their respective subsidiaries.

The Community Bank is the primary banking subsidiary of the Company. Founded on April 14, 1859 and formerly known as Queens County Savings Bank, the Community Bank converted from a state-chartered mutual savings bank to the capital stock form of ownership on November 23, 1993, at which date the Company issued its initial offering of common stock (par value: \$0.01 per share) at a price of \$25.00 per share. The Commercial Bank was established on December 30, 2005.

Reflecting nine stock splits between September 30, 1994 and February 17, 2004, the Company's initial offering price adjusts to \$0.93 per share. All share and per share data presented in this report reflect the impact of the stock splits.

The Company changed its name to New York Community Bancorp, Inc. on November 21, 2000 in anticipation of completing the first of eight business combinations that expanded its footprint well beyond Queens County to encompass all five boroughs of New York City, Long Island, and Westchester County in New York, and seven counties in the northern and central parts of New Jersey. The Company expanded beyond this region to south Florida, northeast Ohio, and central Arizona through its FDIC-assisted acquisition of certain assets and its assumption of certain liabilities of AmTrust Bank (AmTrust) in December 2009, and extended its Arizona franchise through its FDIC-assisted acquisition of certain assets and its assumption of certain liabilities of Desert Hills Bank (Desert Hills) in March 2010. On June 28, 2012, the Company completed its 11th transaction when it assumed the deposits of Aurora Bank FSB.

Reflecting its growth through acquisitions, the Community Bank currently operates 243 branches, five of which operate directly under the Community Bank name. The remaining 238 Community Bank branches operate through seven divisional banks: Queens County Savings Bank, Roslyn Savings Bank, Richmond County Savings Bank, and Roosevelt Savings Bank (in New York); Garden State Community Bank in New Jersey; AmTrust Bank in Florida and Arizona; and Ohio Savings Bank in Ohio.

The Commercial Bank currently operates 30 branches in Manhattan, Queens, Brooklyn, Westchester County, and Long Island (all in New York), including 18 branches that operate under the name Atlantic Bank.

Basis of Presentation

The following is a description of the significant accounting and reporting policies that the Company and its wholly-owned subsidiaries follow in preparing and presenting their consolidated financial statements, which conform to U.S. generally accepted accounting principles (GAAP) and to general practices within the banking industry. The

preparation of financial statements in conformity with GAAP requires the Company to make estimates and judgments that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the consolidated financial statements, and the reported amounts of revenues and expenses during the reporting period. Estimates that are particularly susceptible to change in the near term are used in connection with the determination of the allowances for loan losses; the valuation of mortgage servicing rights (MSRs); the evaluation of goodwill for impairment; the evaluation of other-than-temporary impairment (OTTI) on securities; and the evaluation of the need for a valuation allowance on the Company s deferred tax assets.

The unaudited consolidated financial statements include the accounts of the Company and other entities in which the Company has a controlling financial interest. All inter-company accounts and transactions are eliminated in consolidation. These unaudited consolidated financial statements should be read in conjunction with the audited consolidated financial statements and notes thereto included in the Company s 2013 Annual Report on Form 10-K. The Company currently has certain unconsolidated subsidiaries in the form of wholly-owned statutory business trusts, which were formed to issue guaranteed capital debentures (capital securities). Please see Note 7, Borrowed Funds, for additional information regarding these trusts.

Table of Contents***Effects of New Accounting Pronouncements***

In January 2014, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) No. 2014-01, Investments – Equity Method and Joint Ventures (Topic 323), Accounting for Investments in Qualified Affordable Housing Projects. The amendments in ASU No. 2014-01 provide guidance on accounting for investments by a reporting entity in flow-through limited liability entities that manage or invest in affordable housing projects that qualify for the low-income housing tax credit. The amendments permit reporting entities to make an accounting policy election to account for their investments in qualified affordable housing projects using the proportional amortization method if certain conditions are met. The Company chose to apply this new guidance for the period beginning on January 1, 2014.

The impact of applying this new guidance included a \$1.3 million reduction in the balance of retained earnings as of January 1, 2014. The total amount of affordable housing tax credits and other tax benefits projected to be recognized during calendar year 2014, and the related amount of amortization recognized as a component of income tax expense for calendar year 2014, are \$4.0 million and \$2.8 million, respectively. The commitment of additional anticipated equity contributions of \$8.4 million relating to current investments is reflected in Other liabilities. Retrospective application of the new amortization methodology would not result in a material change to prior-period presentations.

Note 2. Computation of Earnings per Share

Basic earnings per share (EPS) is computed by dividing net income by the weighted average number of common shares outstanding during the period. Diluted EPS is computed using the same method as basic EPS, however, the computation reflects the potential dilution that would occur if outstanding in-the-money stock options were exercised and converted into common stock.

Unvested stock-based compensation awards containing non-forfeitable rights to dividends are considered participating securities, and therefore are included in the two-class method for calculating EPS. Under the two-class method, all earnings (distributed and undistributed) are allocated to common shares and participating securities, based on their respective rights to receive dividends. The Company grants restricted stock to certain employees under its stock-based compensation plans. Recipients receive cash dividends during the vesting periods of these awards, including on the unvested portion of such awards. Since these dividends are non-forfeitable, the unvested awards are considered participating securities and therefore have earnings allocated to them.

The following table presents the Company's computation of basic and diluted EPS for the periods indicated:

(in thousands, except share and per share data)	Three Months Ended		Six Months Ended	
	June 30,		June 30,	
	2014	2013	2014	2013
Net income	\$118,688	\$122,517	\$233,942	\$241,192
Less: Dividends paid on and earnings allocated to participating securities	(852)	(791)	(1,648)	(1,525)
Earnings applicable to common stock	\$117,836	\$121,726	\$232,294	\$239,667
Weighted average common shares outstanding	441,155,063	439,452,048	440,864,462	439,079,827

Basic earnings per common share	\$0.27	\$0.28	\$0.53	\$0.55
Earnings applicable to common stock	\$117,836	\$121,726	\$232,294	\$239,667
Weighted average common shares outstanding	441,155,063	439,452,048	440,864,462	439,079,827
Potential dilutive common shares ⁽¹⁾	--	3,298	--	3,445
Total shares for diluted earnings per share computation	441,155,063	439,455,346	440,864,462	439,083,272
Diluted earnings per common share and common share equivalents	\$0.27	\$0.28	\$0.53	\$0.55

- (1) Options to purchase 58,560 shares of the Company's common stock that were outstanding in the three and six months ended June 30, 2014, at a weighted average exercise price of \$18.04, were excluded from the respective computations of diluted EPS because their inclusion would have had an antidilutive effect. Options to purchase 253,500 shares of the Company's common stock that were outstanding in the three and six months ended June 30, 2013, at a weighted average exercise price of \$22.14, were excluded from the respective computations of diluted EPS because their inclusion also would have had an antidilutive effect.

- (1) Held-to-maturity securities are reported at a carrying amount equal to amortized cost less the non-credit portion of OTTI recorded in AOCL. At December 31, 2013, the non-credit portion of OTTI recorded in AOCL was \$9.2 million (before taxes).

Table of Contents

The Company had \$571.7 million and \$561.4 million of Federal Home Loan Bank (FHLB) stock, at cost, at June 30, 2014 and December 31, 2013, respectively, primarily consisting of stock in the FHLB-New York (FHLB-NY). The Company is required to maintain an investment in FHLB-NY stock in order to have access to the funding it provides to the Company.

The following table summarizes the gross proceeds, gross realized gains, and gross realized losses from the sale of available-for-sale securities during the six months ended June 30, 2014 and 2013:

(in thousands)	For the Six Months Ended June 30,	
	2014	2013
Gross proceeds	\$137,309	\$414,186
Gross realized gains	5,135	5,193
Gross realized losses	--	--

In addition, during the six months ended June 30, 2013, the Company sold held-to-maturity securities with gross proceeds of \$191.1 million and gross realized gains of \$11.6 million, all of which were securities on which the Company had collected a substantial portion (at least 85%) of the initial principal balance. No comparable sales occurred in the first six months of 2014.

In the following table, the beginning balance represents the credit loss component for debt securities on which OTTI occurred prior to January 1, 2014. For credit-impaired debt securities, OTTI recognized in earnings after that date is presented as an addition in two components, based upon whether the current period is the first time a debt security was credit-impaired (initial credit impairment) or is not the first time a debt security was credit-impaired (subsequent credit impairment).

(in thousands)	For the Six Months Ended June 30, 2014

Ending credit loss amount as of June 30, 2014	\$216,334

Table of Contents

The following table summarizes the carrying amounts and estimated fair values of held-to-maturity debt securities, and the amortized costs and estimated fair values of available-for-sale debt securities, at June 30, 2014, by contractual maturity. Mortgage-related securities held to maturity and available for sale, all of which have prepayment provisions, are distributed to a maturity category based on the ends of the estimated average lives of such securities. Principal and amortization prepayments are not shown in maturity categories as they occur, but are considered in the determination of estimated average life.

Table of Contents

An OTTI loss on impaired securities must be fully recognized in earnings if an investor has the intent to sell the debt security, or if it is more likely than not that the investor will be required to sell the debt security before recovery of its amortized cost. However, even if an investor does not expect to sell a debt security, it must evaluate the expected cash flows to be received and determine if a credit loss has occurred. In the event that a credit loss occurs, only the amount of impairment associated with the credit loss is recognized in earnings. Amounts relating to factors other than credit losses are recorded in AOCL. FASB guidance also requires additional disclosures regarding the calculation of credit losses, as well as factors considered by the investor in reaching a conclusion that an investment is not other-than-temporarily impaired.

Securities in unrealized loss positions are analyzed as part of the Company's ongoing assessment of OTTI. When the Company intends to sell such securities, the Company recognizes an impairment loss equal to the full difference between the amortized cost basis and the fair value of those securities. When the Company does not intend to sell equity or debt securities in an unrealized loss position, potential OTTI is considered based on a variety of factors, including the length of time and extent to which the fair value has been less than the cost; adverse conditions specifically related to the industry, the geographic area, or financial condition of the issuer, or the underlying collateral of a security; the payment structure of the security; changes to the rating of the security by a rating agency; the volatility of the fair value changes; and changes in fair value of the security after the balance sheet date. For debt securities, the Company estimates cash flows over the remaining life of the underlying collateral to assess whether credit losses exist and, where applicable, to determine if any adverse changes in cash flows have occurred. The Company's cash flow estimates take into account expectations of relevant market and economic data as of the end of the reporting period. As of June 30, 2014, the Company did not intend to sell its securities with an unrealized loss position, and it was more likely than not that the Company would not be required to sell these securities before recovery of their amortized cost basis. The Company believes that the securities with an unrealized loss position were not other-than-temporarily impaired as of June 30, 2014.

Other factors considered in determining whether or not an impairment is temporary include the length of time and the extent to which fair value has been below cost; the severity of the impairment; the cause of the impairment; the financial condition and near-term prospects of the issuer; activity in the market of the issuer that may indicate adverse credit conditions; and the forecasted recovery period using current estimates of volatility in market interest rates (including liquidity and risk premiums).

Management's assertion regarding its intent not to sell, or that it is not more likely than not that the Company will be required to sell a security before its anticipated recovery, is based on a number of factors, including a quantitative estimate of the expected recovery period (which may extend to maturity), and management's intended strategy with respect to the identified security or portfolio. If management does have the intent to sell, or believes it is more likely than not that the Company will be required to sell the security before its anticipated recovery, the unrealized loss is charged directly to earnings in the Consolidated Statement of Income and Comprehensive Income.

The unrealized losses on the Company's GSE mortgage-related securities and GSE debentures at June 30, 2014 were primarily caused by movements in market interest rates and spread volatility, rather than credit risk. It is expected that these securities will not be settled at a price that is less than the amortized cost of the Company's investment. Because the Company does not have the intent to sell the investments, and it is not more likely than not that the Company will be required to sell them before the anticipated recovery of fair value, which may be at maturity, the Company did not consider these investments to be other than temporarily impaired at June 30, 2014.

The Company reviews quarterly financial information related to its investments in municipal bonds and capital trust notes, as well as other information that is released by each of the issuers of such bonds and notes, to determine their continued creditworthiness. The contractual terms of these investments do not permit settling the securities at prices

that are less than the amortized costs of the investments; therefore, the Company expects that these investments will not be settled at prices that are less than their amortized costs. The Company continues to monitor these investments and currently estimates that the present value of expected cash flows is not less than the amortized cost of the securities. Because the Company does not have the intent to sell the investments, and it is not more likely than not that the Company will be required to sell them before the anticipated recovery of fair value, which may be at maturity, it did not consider these investments to be other-than-temporarily impaired at June 30, 2014. It is possible that these securities will perform worse than is currently expected, which could lead to adverse changes in cash flows from these securities and potential OTTI losses in the future. Future events that could trigger material unrecoverable declines in the fair values of the Company's investments, and result in potential OTTI losses, include, but are not limited to, government intervention; deteriorating asset quality and credit metrics; significantly higher levels of default and loan loss provisions; losses in value on the underlying collateral; deteriorating credit enhancement; net operating losses; and further illiquidity in the financial markets.

At June 30, 2014, the Company's equity securities portfolio consisted of perpetual preferred stock, common stock, and mutual funds. The Company considers a decline in the fair value of available-for-sale equity securities to be other than temporary if the Company does not expect to recover the entire amortized cost basis of the security. The unrealized losses on

Table of Contents

the Company's equity securities at the end of June 2014 were primarily caused by market volatility. The Company evaluated the near-term prospects of a recovery of fair value for each security in the portfolio, together with the severity and duration of impairment to date. Based on this evaluation, and its ability and intent to hold these investments for a reasonably sufficient period of time to realize a near-term forecasted recovery of fair value, the Company did not consider these investments to be other-than-temporarily impaired at June 30, 2014. Nonetheless, it is possible that these equity securities will perform worse than is currently expected, which could lead to adverse changes in their fair values, or the failure of the securities to fully recover in value as presently forecasted by management. This potentially would cause the Company to record OTTI losses in future periods. Events that could trigger material declines in the fair values of these securities include, but are not limited to, deterioration in the equity markets; a decline in the quality of the loan portfolios of the issuers in which the Company has invested; and the recording of higher loan loss provisions and net operating losses by such issuers.

The investment securities designated as having a continuous loss position for twelve months or more at June 30, 2014 consisted of forty agency mortgage-backed securities, seventeen agency debt securities, six agency CMOs, six capital trust notes, and three municipal bonds. At December 31, 2013, the investment securities designated as having a continuous loss position for twelve months or more consisted of six capital trust notes and one mortgage-backed security. At June 30, 2014 and December 31, 2013, the combined market value of the respective securities represented unrealized losses of \$111.6 million and \$10.7 million. At June 30, 2014, the fair value of securities having a continuous loss position for twelve months or more was 3.4% below the collective amortized cost of \$3.2 billion. At December 31, 2013, the fair value of such securities was 19.9% below the collective amortized cost of \$53.7 million.

Note 5. Loans

The following table sets forth the composition of the loan portfolio at June 30, 2014 and December 31, 2013:

Table of Contents

Non-Covered Loans

Non-Covered Loans Held for Investment

The vast majority of the loans the Company originates for investment are multi-family loans, most of which are collateralized by non-luxury apartment buildings in New York City that are rent-regulated and feature below-market rents. In addition, the Company originates commercial real estate (CRE) loans, most of which are collateralized by properties located in New York City and Long Island.

The Company also originates one-to-four family loans; acquisition, development, and construction (ADC) loans; and commercial and industrial (C&I) loans for investment. ADC loans are primarily originated for multi-family and residential tract projects in New York City and on Long Island, while one-to-four family loans are originated both within and beyond the markets served by its branch offices. C&I loans consist of asset-based loans, equipment loans and leases, and dealer floor plan loans (together, specialty finance loans and leases) that are made to nationally recognized borrowers throughout the U.S. and are senior debt-secured; and other C&I loans, both secured and unsecured, that primarily are made to small and mid-size businesses in Metro New York. Such C&I loans are typically made for working capital, business expansion, and the purchase of machinery and equipment.

Payments on multi-family and CRE loans generally depend on the income produced by the underlying properties which, in turn, depends on their successful operation and management. Accordingly, the ability of the Company's borrowers to repay these loans may be impacted by adverse conditions in the local real estate market and the local economy. While the Company generally requires that such loans be qualified on the basis of the collateral property's current cash flows, appraised value, and debt service coverage ratio, among other factors, there can be no assurance that its underwriting policies will protect the Company from credit-related losses or delinquencies.

The one-to-four family loans that are held for investment consist primarily of hybrid loans (both jumbo and agency-conforming) that have been made at conservative loan-to-value ratios to borrowers with a documented history of repaying their debts.

ADC loans typically involve a higher degree of credit risk than loans secured by improved or owner-occupied real estate. Accordingly, borrowers are required to provide a guarantee of repayment and completion, and loan proceeds are disbursed as construction progresses, as certified by in-house or third-party engineers. The risk of loss on an ADC loan is largely dependent upon the accuracy of the initial appraisal of the property's value upon completion of construction or development; the estimated cost of construction, including interest; and the estimated time to complete and/or sell or lease such property. The Company seeks to minimize these risks by maintaining conservative lending policies and rigorous underwriting standards. However, if the estimate of value proves to be inaccurate, the cost of completion is greater than expected, the length of time to complete and/or sell or lease the collateral property is greater than anticipated, or if there is a downturn in the local economy or real estate market, the property could have a value upon completion that is insufficient to assure full repayment of the loan. This could have a material adverse effect on the quality of the ADC loan portfolio, and could result in losses or delinquencies.

To minimize the risk involved in specialty finance lending and leasing, the Company primarily participates in broadly syndicated asset-based loans, equipment loan and lease financing, and dealer floor plan loans that are presented by those who are on an approved list of select, nationally recognized sources with whom its lending officers have established long-term funding relationships. The loans and leases, which are secured by a perfected first security interest in the underlying collateral and structured as senior debt, are made to large corporate obligors, the majority of which are publicly traded, carry investment grade or near-investment grade ratings, participate in stable industries, and are located nationwide. To further minimize the risk involved in specialty finance lending and leasing, the Company

re-underwrites each transaction; in addition, it retains outside counsel to conduct a further review of the underlying documentation.

To minimize the risks involved in other C&I lending, the Company underwrites such loans on the basis of the cash flows produced by the business; requires that such loans be collateralized by various business assets, including inventory, equipment, and accounts receivable, among others; and requires personal guarantees. However, the capacity of a borrower to repay such a C&I loan is substantially dependent on the degree to which his or her business is successful. In addition, the collateral underlying such loans may depreciate over time, may not be conducive to appraisal, or may fluctuate in value, based upon the results of operations of the business.

Included in non-covered loans held for investment at June 30, 2014 and December 31, 2013 were loans to non-officer directors of \$148.0 million and \$149.4 million, respectively.

Table of Contents*Loans Held for Sale*

The Community Bank's mortgage banking operation was established in January 2010 to originate, aggregate, and service one-to-four family loans. Community banks, credit unions, mortgage companies, and mortgage brokers use its proprietary web-accessible mortgage banking platform to originate and close one-to-four family loans throughout the U.S. These loans are generally sold, servicing retained, to GSEs. To a much lesser extent, the Community Bank uses its mortgage banking platform to originate fixed-rate jumbo loans under contract for sale to other financial institutions. The volume of jumbo loan originations has been insignificant to date, and the Company does not expect such loans to represent a material portion of the held-for-sale loans it originates. The Company also services mortgage loans for various third parties, primarily including those it sells to GSEs. The unpaid principal balance of loans serviced for others was \$21.7 billion at June 30, 2014 and \$21.5 billion at December 31, 2013.

Asset Quality

The following table presents information regarding the quality of the Company's non-covered loans held for investment at June 30, 2014:

(in thousands)	Loans 90 Days or More Delinquent and Still Accruing Interest					
	Loans 30-89 Days Past Due	Non- Accrual Loans	Total Past Due Loans	Current Loans	Total Loans Receivable

Table of Contents

The following table summarizes the Company's portfolio of non-covered loans held for investment by credit quality indicator at June 30, 2014:

(in thousands)	Multi-Family	Commercial Real Estate	One-to-Family	Acquisition, Development, and Construction	Total Mortgage Loans	Commercial and Industrial ⁽¹⁾	Other	Total Other Loan Segment
Credit Quality Indicator:								
Pass	\$22,242,080	\$ 7,573,442	\$ 685,627	\$ 340,937	\$ 30,842,086	\$ 924,962	\$ 34,452	\$ 959,414
Special mention	27,211	11,718	--	--	38,929	36,277	--	36,277
Substandard	41,221	34,591	4,339	2,661	82,812	5,642	1,244	6,886
Doubtful	--	--	--	--	--	7	--	7
Total	\$22,310,512	\$ 7,619,751	\$ 689,966	\$ 343,598	\$ 30,963,827	\$ 966,888	\$ 35,696	\$ 1,002,584

(1) Includes lease financing receivables, all of which were classified as pass.

The following table summarizes the Company's portfolio of non-covered loans held for investment by credit quality indicator at December 31, 2013:

(in thousands)	Multi-Family	Commercial Real Estate	One-to-Family	Acquisition, Development, and Construction	Total Mortgage Loans	Commercial and Industrial ⁽¹⁾	Other	Total Other Loan Segment
Credit Quality Indicator:								
Pass	\$20,527,460	\$ 7,304,502	\$ 554,132	\$ 333,805	\$ 28,719,899	\$ 793,693	\$ 37,688	\$831,381
Special mention	73,549	25,407	--	7,400	106,356	13,036	--	13,036
Substandard	98,918	33,822	6,598	2,895	142,233	6,808	1,348	8,156
Doubtful	--	500	--	--	500	154	--	154
Total	\$20,699,927	\$ 7,364,231	\$ 560,730	\$ 344,100	\$ 28,968,988	\$ 813,691	\$ 39,036	\$852,727

(1) Includes lease financing receivables, all of which were classified as pass.

The preceding classifications follow regulatory guidelines and can be generally described as follows: pass loans are of satisfactory quality; special mention loans have a potential weakness or risk that may result in the deterioration of future repayment; substandard loans are inadequately protected by the current net worth and paying capacity of the borrower or of the collateral pledged (these loans have a well-defined weakness and there is a distinct possibility that

the Company will sustain some loss); and doubtful loans, based on existing circumstances, have weaknesses that make collection or liquidation in full highly questionable and improbable. In addition, one-to-four family loans are classified utilizing an inter-regulatory agency methodology that incorporates the extent of delinquency and the loan-to-value ratios. These classifications are the most current available and generally have been updated within the last twelve months.

Troubled Debt Restructurings

The Company is required to account for certain held-for-investment loan modifications or restructurings as Troubled Debt Restructurings (TDRs). In general, a modification or restructuring of a loan constitutes a TDR if the Company grants a concession to a borrower experiencing financial difficulty. Loans modified as TDRs generally are placed on non-accrual status until the Company determines that future collection of principal and interest is reasonably assured, which requires that the borrower demonstrate performance according to the restructured terms for a period of at least six consecutive months.

In an effort to proactively manage delinquent loans, the Company has selectively extended to certain borrowers concessions such as rate reductions, extension of maturity dates, and forbearance agreements. As of June 30, 2014, loans on which concessions were made with respect to rate reductions and/or extension of maturity dates amounted to \$43.6 million; loans on which forbearance agreements were reached amounted to \$6.0 million.

The following table presents information regarding the Company's TDRs as of June 30, 2014 and December 31, 2013:

(in thousands)	June 30, 2014			December 31, 2013		
	Accruing	Non-Accrual	Total	Accruing	Non-Accrual	Total
Loan Category:						
Multi-family	\$10,001	\$18,093	\$28,094	\$10,083	\$50,548	\$60,631
Commercial real estate	2,156	16,295	18,451	2,198	15,626	17,824
One-to-four family	--	--	--	--	--	--
Acquisition, development, and construction	--	935	935	--	--	--
Commercial and industrial	956	1,210	2,166	1,129	758	1,887
Total	\$13,113	\$36,533	\$49,646	\$13,410	\$66,932	\$80,342

Table of Contents

The eligibility of a borrower for work-out concessions of any nature depends upon the facts and circumstances of each transaction, which may change from period to period, and involves judgment by Company personnel regarding the likelihood that the concession will result in the maximum recovery for the Company.

In the six months ended June 30, 2014, the Company classified one ADC loan in the amount of \$935,000, one C&I loan in the amount of \$499,000, one multi-family loan in the amount of \$316,000, and one CRE loan in the amount of \$2.1 million, as non-accrual TDRs. While other concessions were granted to the borrowers, the interest rates on the loans were maintained. As a result, these TDRs did not have a financial impact on the Company's results of operations during the current six-month period.

At June 30, 2014, none of the loans that had been modified as TDRs during the twelve months ended at that date were in payment default. A loan is considered to be in payment default once it is 30 days contractually past due under the modified terms.

The Company does not consider a payment to be in default when the loan is in forbearance, or otherwise granted a delay of payment, when the agreement to forebear or allow a delay of payment is part of a modification. Subsequent to the modification, the loan is not considered to be in default until payment is contractually past due in accordance with the modified terms. However, the Company does consider a loan with multiple modifications or forbearance periods to be in default, and would also consider a loan to be in default if it was in bankruptcy or was partially charged off subsequent to modification.

Covered Loans

The following table presents the carrying value of covered loans acquired in the AmTrust and Desert Hills acquisitions as of June 30, 2014:

(dollars in thousands)	Amount	Percent of Covered Loans
Loan Category:		
One-to-four family	\$ 2,365,543	91.1%
All other loans	231,116	8.9
Total covered loans	\$ 2,596,659	100.0%

The Company refers to the loans acquired in the AmTrust and Desert Hills transactions as "covered loans" because the Company is being reimbursed for a substantial portion of losses on these loans under the terms of the FDIC loss sharing agreements. Covered loans are accounted for under Accounting Standards Codification (ASC) Topic 310-30, Loans and Debt Securities Acquired with Deteriorated Credit Quality (ASC 310-30) and are initially measured at fair value, which includes estimated future credit losses expected to be incurred over the lives of the loans. Under ASC 310-30, purchasers are permitted to aggregate acquired loans into one or more pools, provided that the loans have common risk characteristics. A pool is then accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows.

At June 30, 2014 and December 31, 2013, the unpaid principal balances of covered loans were \$3.1 billion and \$3.3 billion, respectively. The carrying values of such loans were \$2.6 billion and \$2.8 billion, respectively, at the corresponding dates.

At the respective acquisition dates, the Company estimated the fair values of the AmTrust and Desert Hills loan portfolios, which represented the expected cash flows from the portfolios, discounted at market-based rates. In estimating such fair values, the Company: (a) calculated the contractual amount and timing of undiscounted principal and interest payments (the undiscounted contractual cash flows); and (b) estimated the expected amount and timing of undiscounted principal and interest payments (the undiscounted expected cash flows). The amount by which the undiscounted expected cash flows exceed the estimated fair value (the accretable yield) is accreted into interest income over the lives of the loans. The amount by which the undiscounted contractual cash flows exceed the undiscounted expected cash flows is referred to as the non-accretable difference. The non-accretable difference represents an estimate of the credit risk in the loan portfolios at the respective acquisition dates.

The accretable yield is affected by changes in interest rate indices for variable rate loans, changes in prepayment assumptions, and changes in expected principal and interest payments over the estimated lives of the loans. Changes in interest rate indices for variable rate loans increase or decrease the amount of interest income expected to be collected, depending on the direction of interest rates. Prepayments affect the estimated lives of covered loans and could change the amount of interest income and principal expected to be collected. Changes in expected principal and interest payments over the estimated lives of covered loans are driven by the credit outlook and by actions that may be taken with borrowers.

Table of Contents

The Company periodically evaluates the estimates of the cash flows it expects to collect. Expected future cash flows from interest payments are based on variable rates at the time of the periodic evaluation. Estimates of expected cash flows that are impacted by changes in interest rate indices for variable rate loans and prepayment assumptions are treated as prospective yield adjustments and included in interest income.

Changes in the accretable yield for covered loans in the six months ended June 30, 2014 were as follows:

(in thousands)	Accretable Yield
Balance at beginning of period	\$796,993
Reclassification from non-accretable difference	159,338
Accretion	(69,636)
Balance at end of period	\$886,695

In the preceding table, the line item reclassification from non-accretable difference includes changes in cash flows that the Company expects to collect due to changes in prepayment assumptions, changes in interest rates on variable rate loans, and changes in loss assumptions. As of the Company's most recent periodic evaluation, prepayment assumptions declined, which resulted in an increase in future expected interest cash flows and, consequently, an increase in the accretable yield. The effect of this increase was partially offset by two factors: first, the coupon rates on variable rate loans reset lower, which resulted in a decrease in future expected interest cash flows and, consequently, a decrease in the accretable yield; and second, as the underlying credit assumptions worsened slightly, the projected loss assumptions on defaulting loans increased which, in turn, reduced the accretable yield.

In connection with the AmTrust and Desert Hills acquisitions, the Company also acquired other real estate owned (OREO), all of which is covered under the FDIC loss sharing agreements. Covered OREO was initially recorded at its estimated fair value on the acquisition date, based on independent appraisals, less the estimated selling costs. Any subsequent write-downs due to declines in fair value have been charged to non-interest expense, and have been partially offset by loss reimbursements under the FDIC loss sharing agreements. Any recoveries of previous write-downs have been credited to non-interest expense and partially offset by the portion of the recovery that was due to the FDIC.

The FDIC loss share receivable represents the present value of the estimated losses to be reimbursed by the FDIC. The estimated losses were based on the same cash flow estimates used in determining the fair value of the covered loans. The FDIC loss share receivable is reduced as losses on covered loans are recognized and as loss sharing payments are received from the FDIC. Realized losses in excess of acquisition-date estimates result in an increase in the FDIC loss share receivable. Conversely, if realized losses are lower than the acquisition-date estimates, the FDIC loss share receivable is reduced by amortization to interest income.

The following table presents information regarding the Company's covered loans that were 90 days or more past due at June 30, 2014 and December 31, 2013:

(in thousands)	June 30, 2014	December 31, 2013
Covered Loans 90 Days or More Past Due:		

One-to-four family	\$164,266	\$201,425
Other loans	9,726	10,060
Total covered loans 90 days or more past due	\$173,992	\$211,485

The following table presents information regarding the Company's covered loans that were 30 to 89 days past due at June 30, 2014 and December 31, 2013:

(in thousands)	June 30, 2014	December 31, 2013
Covered Loans 30-89 Days Past Due:		
One-to-four family	\$44,834	\$52,250
Other loans	3,999	5,679
Total covered loans 30-89 days past due	\$48,833	\$57,929

At June 30, 2014, the Company had \$48.8 million of covered loans that were 30 to 89 days past due, and covered loans of \$174.0 million that were 90 days or more past due but considered to be performing due to the application of the yield accretion method under ASC 310-30. The remaining portion of the Company's covered loan portfolio totaled \$2.4 billion at June 30, 2014 and was considered current at that date. ASC 310-30 allows the Company to aggregate credit-impaired loans acquired in the same fiscal quarter into one or more pools, provided that the loans have common risk characteristics. A pool is then accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows.

Table of Contents

Loans that may have been classified as non-performing loans by AmTrust or Desert Hills were no longer classified as non-performing by the Company because, at the respective dates of acquisition, the Company believed that it would fully collect the new carrying value of these loans. The new carrying value represents the contractual balance, reduced by the portion that is expected to be uncollectible (i.e., the non-accretable difference) and by an accretable yield (discount) that is recognized as interest income. It is important to note that management's judgment is required in reclassifying loans subject to ASC 310-30 as performing loans, and such judgment is dependent on having a reasonable expectation about the timing and amount of the cash flows to be collected, even if the loan is contractually past due.

The primary credit quality indicator for covered loans is the expectation of underlying cash flows. The Company recorded a provision for losses on covered loans of \$188,000 in the three months ended June 30, 2014. The provision was largely due to credit deterioration in the acquired portfolios of one-to-four family and home equity loans, and was partly offset by FDIC indemnification income of \$150,000 recorded in non-interest income in the corresponding three-month period.

The Company recovered \$14.4 million from the allowance for losses on covered loans during the six months ended June 30, 2014. The recoveries were recorded in connection with an increase in expected cash flows on certain pools of loans acquired in the Company's FDIC-assisted transactions, and were partly offset by FDIC indemnification expense of \$11.6 million, which was recorded in non-interest income in the corresponding six-month period.

Note 6. Allowances for Loan Losses

The following tables provide information regarding the Company's allowances for losses on non-covered and covered loans, based upon the method of evaluating loan impairment, at the dates indicated:

(in thousands)	Mortgage	Other	Total
Allowances for Loan Losses at June 30, 2014:			
Loans individually evaluated for impairment	\$ --	\$ 2	\$ 2
Loans collectively evaluated for impairment	126,420	13,051	139,471
Acquired loans with deteriorated credit quality	44,076	5,550	49,626
Total	\$ 170,496	\$ 18,603	\$ 189,099

(in thousands)	Mortgage	Other	Total
Allowances for Loan Losses at December 31, 2013:			
Loans individually evaluated for impairment	\$ --	\$ --	\$ --
Loans collectively evaluated for impairment	127,840	14,106	141,946
Acquired loans with deteriorated credit quality	56,705	7,364	64,069
Total	\$ 184,545	\$ 21,470	\$ 206,015

The following tables provide additional information regarding the methods used to evaluate the Company's loan portfolio for impairment:

(in thousands)	Mortgage	Other	Total
Loans Receivable at June 30, 2014:			
Loans individually evaluated for impairment	\$ 70,067	\$ 6,113	\$ 76,180
Loans collectively evaluated for impairment	30,893,760	996,471	31,890,231
Acquired loans with deteriorated credit quality	2,365,543	231,116	2,596,659
Total	\$ 33,329,370	\$ 1,233,700	\$ 34,563,070

(in thousands)	Mortgage	Other	Total
Loans Receivable at December 31, 2013:			
Loans individually evaluated for impairment	\$ 109,389	\$ 6,996	\$ 116,385
Loans collectively evaluated for impairment	28,859,599	845,731	29,705,330
Acquired loans with deteriorated credit quality	2,529,200	259,418	2,788,618
Total	\$ 31,498,188	\$ 1,112,145	\$ 32,610,333

Table of Contents**Allowance for Losses on Non-Covered Loans**

The following table summarizes activity in the allowance for losses on non-covered loans for the six months ended June 30, 2014 and 2013:

(in thousands)	For the Six Months Ended June 30,					
	Mortgage	2014 Other	Total	Mortgage	2013 Other	Total
Balance, beginning of period	\$127,840	\$14,106	\$141,946	\$127,934	\$13,014	\$140,948

Allowance for Losses on Covered Loans

Covered loans are reported exclusive of the FDIC loss share receivable. The covered loans acquired in the AmTrust and Desert Hills acquisitions are, and will continue to be, reviewed for collectability based on the expectations of cash flows from these loans. Covered loans have been aggregated into pools of loans with common characteristics. In determining the allowance for losses on covered loans, the Company periodically performs an analysis to estimate the expected cash flows for each of the loan pools. The Company records a provision for losses on covered loans to the extent that the expected cash flows from a loan pool have decreased since the acquisition date. Accordingly, if there is a decrease in expected cash flows due to an increase in estimated credit losses (as compared to the estimates made at the respective acquisition dates), the decrease in the present value of expected cash flows is recorded as a provision for

covered loan losses charged to earnings, and an allowance for covered loan losses is established. A related credit to non-interest income and an increase in the FDIC loss share receivable is recognized at the same time, and measured based on the applicable loss sharing agreement percentage.

The following table summarizes activity in the allowance for losses on covered loans for the six months ended June 30, 2014 and 2013:

(in thousands)	For the Six Months Ended June 30,	
	2014	2013
Balance, beginning of period	\$ 64,069	\$ 51,311
(Recovery of) provision for losses on covered loans	(14,443)	9,120
Balance, end of period	\$ 49,626	\$ 60,431

Table of Contents**Note 7. Borrowed Funds**

The following table summarizes the Company's borrowed funds at June 30, 2014 and December 31, 2013:

(in thousands)	June 30, 2014	December 31, 2013
Wholesale borrowings:		
FHLB advances	\$11,089,128	\$10,872,576
Repurchase agreements	3,425,000	3,425,000
Fed funds purchased	425,000	445,000
Total wholesale borrowings	\$14,939,128	\$14,742,576
Other borrowings:		
Junior subordinated debentures	\$ 358,238	\$ 358,126
Preferred stock of subsidiaries	4,300	4,300
Total other borrowings	\$ 362,538	\$ 362,426
Total borrowed funds	\$15,301,666	\$15,105,002

At June 30, 2014 and December 31, 2013, the Company had \$358.2 million and \$358.1 million, respectively, of outstanding junior subordinated deferrable interest debentures (junior subordinated debentures) held by statutory business trusts (the Trusts) that issued guaranteed capital securities. The capital securities qualified as Tier 1 capital of the Company at that date. However, with the passage of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010, the qualification of capital securities as Tier 1 capital is expected to be phased out by January 1, 2016.

The Trusts are accounted for as unconsolidated subsidiaries in accordance with GAAP. The proceeds of each issuance were invested in a series of junior subordinated debentures of the Company and the underlying assets of each statutory business trust are the relevant debentures. The Company has fully and unconditionally guaranteed the obligations under each trust's capital securities to the extent set forth in a guarantee by the Company to each trust. The Trusts' capital securities are each subject to mandatory redemption, in whole or in part, upon repayment of the debentures at their stated maturity or earlier redemption.

The following junior subordinated debentures were outstanding at June 30, 2014:

Issuer	Interest Rate of Capital Securities and Debentures	Junior Subordinated Securities	Capital Amount	Date of Original Issue	Stated Maturity	First Optional Redemption Date
			Carrying Outstanding			

Amount
(dollars in thousands)

New York Community Capital Trust V (BONUSES SM Units)	6.000%	\$144,312	\$137,961	Nov. 4, 2002	Nov. 1, 2051	Nov. 4, 2007 ⁽¹⁾
New York Community Capital Trust X	1.831	123,712	120,000	Dec. 14, 2006	Dec. 15, 2036	Dec. 15, 2011 ⁽²⁾
PennFed Capital Trust III	3.481	30,928	30,000	June 2, 2003	June 15, 2033	June 15, 2008 ⁽²⁾
New York Community Capital Trust XI	1.884	59,286	57,500	April 16, 2007	June 30, 2037	June 30, 2012 ⁽²⁾
Total junior subordinated debentures		\$358,238	\$345,461			

(1) Callable subject to certain conditions as described in the prospectus filed with the SEC on November 4, 2002.

(2) Callable from this date forward.

Note 8. Mortgage Servicing Rights

The Company had MSR of \$228.8 million and \$241.0 million, respectively, at June 30, 2014 and December 31, 2013, with both balances consisting entirely of residential MSRs.

Residential MSRs are carried at fair value, with changes in fair value recorded as a component of non-interest income in each period. The Company uses various derivative instruments to mitigate the income statement-effect of changes in fair value due to changes in valuation inputs and assumptions regarding its residential MSRs. The effects of changes in the fair value of the derivatives are recorded in Non-interest income. MSRs do not trade in an active open market with readily observable prices. Accordingly, the Company bases the fair value of its MSRs on the present value of estimated future net servicing income cash flows. The Company estimates future net servicing income cash flows with assumptions that market participants

Table of Contents

would use to estimate fair value, including estimates of prepayment speeds, discount rates, default rates, refinance rates, servicing costs, escrow account earnings, contractual servicing fee income, and ancillary income. The Company reassesses, and periodically adjusts, the underlying inputs and assumptions to reflect market conditions and assumptions that a market participant would consider in valuing the MSR asset.

The value of residential MSRs at any given time is significantly affected by the mortgage interest rates that are then currently available in the marketplace which, in turn, influence mortgage loan prepayment speeds. During periods of declining interest rates, the value of MSRs generally declines as an increase in mortgage refinancing activity results in an increase in prepayments. Conversely, during periods of rising interest rates, the value of MSRs generally increases as mortgage refinancing activity declines.

During the twelve months ended December 31, 2013, the Company also had securitized MSRs, which were carried at the lower of the initial carrying value, adjusted for amortization, or fair value, and were amortized in proportion to, and over the period of, estimated net servicing income. Such MSRs were periodically evaluated for impairment, based on the difference between their carrying amount and their current fair value. If it was determined that impairment existed, the resultant loss was charged to earnings. Reflecting amortization, the Company had no securitized MSRs at December 31, 2013.

The following tables set forth the changes in the balances of residential and securitized MSRs for the periods indicated:

(in thousands)	For the Three Months Ended June 30, 2014		For the Three Months Ended June 30, 2013	
	Residential	Securitized	Residential	Securitized
Carrying value, beginning of period	\$238,004	\$ --	\$172,849	\$129
Additions	7,175	--	23,072	--
Increase (decrease) in fair value:				
Due to changes in valuation assumptions	(535)	--	34,754	--
Due to other changes ⁽¹⁾	(15,829)	--	(15,716)	--
Amortization	--	--	--	(33)
Carrying value, end of period	\$228,815	\$ --	\$214,959	\$ 96

(1) Net servicing cash flows, including loan payoffs, and the passage of time.

(in thousands)	For the Six Months Ended June 30, 2014		For the Six Months Ended June 30, 2013	
	Residential	Securitized	Residential	Securitized
Carrying value, beginning of year	\$241,018	\$ --	\$144,520	\$193
Additions	13,983	--	54,673	--
Increase (decrease) in fair value:				

Due to changes in valuation assumptions	(492)	--	47,848	--
Due to other changes ⁽¹⁾	(25,694)	--	(32,082)	--

Amortization of net actuarial loss	822	118	2,351	164
Net periodic (credit) expense	\$ (2,563)	\$ 247	\$ (432)	\$ 274

(in thousands)	For the Six Months Ended June 30,		2013	
	2014	2013	2013	2013
	Pension Benefits	Post-Retirement Benefits	Pension Benefits	Post-Retirement Benefits
Components of net periodic (credit) expense:				
Interest cost	\$ 2,948	\$ 380	\$ 2,728	\$ 342
Service cost	--	2	--	2
Expected return on plan assets	(9,718)	--	(8,294)	--
Amortization of prior-service loss	--	(124)	--	(124)
Amortization of net actuarial loss	1,644	236	4,702	328
Net periodic (credit) expense	\$ (5,126)	\$ 494	\$ (864)	\$ 548

The Company expects to contribute \$1.5 million to its post-retirement plan to pay premiums and claims for the fiscal year ending December 31, 2014. The Company does not expect to make any contributions to its pension plan in 2014.

Note 10. Stock-Based Compensation

At June 30, 2014, the Company had a total of 14,471,653 shares available for grants as options, restricted stock, or other forms of related rights under the New York Community Bancorp, Inc. 2012 Stock Incentive Plan (the 2012

Stock Incentive Plan), which was approved by the Company's shareholders at its Annual Meeting on June 7, 2012. Included in this amount were 1,030,673 shares that were transferred from the New York Community Bancorp, Inc. 2006 Stock Incentive Plan (the 2006 Stock Incentive Plan), which was approved by the Company's shareholders at its Annual Meeting on June 7, 2006 and reapproved at its Annual Meeting on June 2, 2011. The Company granted 2,329,498 shares of restricted stock in the six months ended June 30, 2014, with an average fair value of \$16.82 per share on the date of grant and a vesting period of five years. The six-month amount includes 15,000 shares that were granted in the second quarter with an average fair value of \$15.75 per share on the date of grant. Compensation and benefits expense related to the restricted stock grants is recognized on a straight-line basis over the vesting period, and totaled \$13.9 million and \$11.0 million, respectively, in the six months ended June 30, 2014 and 2013, including \$7.3 million and \$5.4 million, respectively, in the three months ended at those dates.

A summary of activity with regard to restricted stock awards in the six months ended June 30, 2014 is presented in the following table:

	For the Six Months Ended June 30, 2014	
	Number of Shares	Weighted Average Grant Date Fair Value
Unvested at beginning of year	5,043,642	\$ 14.27
Granted	2,329,498	16.82
Vested	(1,295,631)	14.55
Cancelled	(57,700)	15.20
Unvested at end of period	6,019,809	15.19

Table of Contents

As of June 30, 2014, unrecognized compensation cost relating to unvested restricted stock totaled \$79.7 million. This amount will be recognized over a remaining weighted average period of 3.5 years.

In addition, the Company had the following stock option plans at June 30, 2014: the 1998 Richmond County Financial Corp. Stock Compensation Plan; the 1998 Long Island Financial Corp. Stock Option Plan; and the 2004 Synergy Financial Group Stock Option Plans (all plans collectively referred to as the Stock Option Plans). All stock options granted under the Stock Option Plans expire ten years from the date of grant.

The Company uses the modified prospective approach to recognize compensation costs related to share-based payments at fair value on the date of grant, and recognizes such costs in the financial statements over the vesting period during which the employee provides service in exchange for the award. As there were no unvested options at any time during the six months ended June 30, 2014, or the year ended December 31, 2013, the Company did not record any compensation and benefits expense relating to stock options during those periods.

To satisfy the exercise of options, the Company either issues new shares of common stock or uses common stock held in Treasury. In the event that Treasury stock is used, the difference between the average cost of Treasury shares and the exercise price is recorded as an adjustment to retained earnings or paid-in capital on the date of exercise. At June 30, 2014, there were 103,974 stock options outstanding. The number of shares available for future issuance under the Stock Option Plans was 11,453 at that date.

The status of the Stock Option Plans at June 30, 2014, and changes that occurred during the six months ended at that date, are summarized below:

	For the Six Months Ended June 30, 2014	
	Number of Stock Options	Weighted Average Exercise Price
Stock options outstanding, beginning of year	126,821	\$ 15.21
Granted	--	--
Exercised	(21,107)	12.69
Expired/forfeited	(1,740)	16.38
Stock options outstanding, end of period	103,974	15.70
Options exercisable, end of period	103,974	15.70

The intrinsic value of stock options outstanding and exercisable at June 30, 2014 was \$146,000. The intrinsic value of options exercised during the six months ended June 30, 2014 and 2013 was \$63,000 and \$60,000, respectively.

Note 11. Fair Value Measurements

GAAP sets forth a definition of fair value, establishes a consistent framework for measuring fair value, and requires disclosure for each major asset and liability category measured at fair value on either a recurring or non-recurring basis. GAAP also clarifies that fair value is an exit price, representing the amount that would be received when selling an asset, or paid when transferring a liability, in an orderly transaction between market participants. Fair value is thus a market-based measurement that should be determined based on assumptions that market participants would use in pricing an asset or liability. As a basis for considering such assumptions, GAAP establishes a three-tier fair value

hierarchy, which prioritizes the inputs used in measuring fair value as follows:

Level 1 Inputs to the valuation methodology are quoted prices (unadjusted) for identical assets or liabilities in active markets.

Level 2 Inputs to the valuation methodology include quoted prices for similar assets and liabilities in active markets, and inputs that are observable for the asset or liability, either directly or indirectly, for substantially the full term of the financial instrument.

Level 3 Inputs to the valuation methodology are significant unobservable inputs that reflect a company's own assumptions about the assumptions that market participants use in pricing an asset or liability.

A financial instrument's categorization within this valuation hierarchy is based upon the lowest level of input that is significant to the fair value measurement.

Table of Contents

The following tables present assets and liabilities that were measured at fair value on a recurring basis as of June 30, 2014 and December 31, 2013, and that were included in the Company's Consolidated Statements of Condition at those dates:

	Fair Value Measurements at June 30, 2014 Using					Total Fair Value
	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	Netting Adjustments ⁽¹⁾

(2) Includes \$1.3 million to purchase Treasury options.

The Company reviews and updates the fair value hierarchy classifications for its assets on a quarterly basis. Changes from one quarter to the next that are related to the observability of inputs for a fair value measurement may result in a reclassification from one hierarchy level to another.

A description of the methods and significant assumptions utilized in estimating the fair values of available-for-sale securities follows.

Where quoted prices are available in an active market, securities are classified within Level 1 of the valuation hierarchy. Level 1 securities include highly liquid government securities, exchange-traded securities, and derivatives.

If quoted market prices are not available for the specific security, then fair values are estimated by using pricing models. These pricing models primarily use market-based or independently sourced market parameters as inputs, including, but not limited to, yield curves, interest rates, equity or debt prices, and credit spreads. In addition to observable market information, models incorporate transaction details such as maturity and cash flow assumptions. Securities valued in this manner would generally be classified within Level 2 of the valuation hierarchy, and primarily include such instruments as mortgage-related and corporate debt securities.

In certain cases where there is limited activity or less transparency around inputs to the valuation, securities are classified within Level 3 of the valuation hierarchy. In valuing capital trust notes, which may include pooled trust preferred securities, collateralized debt obligations (CDOs), and certain single-issue capital trust notes, the determination of fair value may require benchmarking to similar instruments or analyzing default and recovery rates. Therefore, capital trust notes are valued using a model based on the specific collateral composition and cash flow structure of the securities. Key inputs to the model consist of market spread data for each credit rating, collateral type, and other relevant contractual features. In instances where quoted price information is available, the price is considered when arriving at a security's fair value. Where there is limited activity or less transparency around the inputs to the valuation of preferred stock, the valuation is based on a discounted cash flow model.

Table of Contents

Periodically, the Company uses fair values supplied by independent pricing services to corroborate the fair values derived from the pricing models. In addition, the Company reviews the fair values supplied by independent pricing services, as well as their underlying pricing methodologies, for reasonableness. The Company challenges pricing services' valuations that appear to be unusual or unexpected.

The Company carries loans held for sale originated by the Residential Mortgage Banking segment at fair value, in accordance with ASC Topic 825, Financial Instruments. The fair value of loans held for sale is primarily based on quoted market prices for securities backed by similar types of loans. Changes in the fair value of these assets are largely driven by changes in interest rates subsequent to loan funding, and changes in the fair value of servicing associated with the mortgage loans held for sale. Loans held for sale are classified within Level 2 of the valuation hierarchy.

MSRs do not trade in an active open market with readily observable prices. The Company bases the fair value of its MSRs on the present value of estimated future net servicing income cash flows, utilizing an internal valuation model. The Company estimates future net servicing income cash flows with assumptions that market participants would use to estimate fair value, including estimates of prepayment speeds, discount rates, default rates, refinance rates, servicing costs, escrow account earnings, contractual servicing fee income, and ancillary income. The Company reassesses and periodically adjusts the underlying inputs and assumptions to reflect market conditions and assumptions that a market participant would consider in valuing the MSR asset. MSR fair value measurements use significant unobservable inputs and, accordingly, are classified within Level 3.

Exchange-traded derivatives that are valued using quoted prices are classified within Level 1 of the valuation hierarchy. The majority of the Company's derivative positions are valued using internally developed models that use readily observable market parameters as their basis. These are parameters that are actively quoted and can be validated by external sources, including industry pricing services. Where the types of derivative products have been in existence for some time, the Company uses models that are widely accepted in the financial services industry. These models reflect the contractual terms of the derivatives, including the period to maturity, and market-based parameters such as interest rates, volatility, and the credit quality of the counterparty. Furthermore, many of these models do not contain a high level of subjectivity, as the methodologies used in the models do not require significant judgment, and inputs to the models are readily observable from actively quoted markets, as is the case for plain vanilla interest rate swaps and option contracts. Such instruments are generally classified within Level 2 of the valuation hierarchy. Derivatives that are valued based on models with significant unobservable market parameters, and that are normally traded less actively, have trade activity that is one-way, and/or are traded in less-developed markets, are classified within Level 3 of the valuation hierarchy.

The fair values of interest rate lock commitments (IRLCs) for residential mortgage loans that the Company intends to sell are based on internally developed models. The key model inputs primarily include the sum of the value of the forward commitment based on the loans' expected settlement dates and the projected values of the MSRs, loan level price adjustment factors, and historical IRLC closing ratios. The closing ratio is computed by the Company's mortgage banking operation and is periodically reviewed by management for reasonableness. Such derivatives are classified as Level 3.

While the Company believes its valuation methods are appropriate and consistent with those of other market participants, the use of different methodologies or assumptions to determine the fair values of certain financial instruments could result in different estimates of fair values at a reporting date.

Fair Value Option

Loans Held for Sale

The Company has elected the fair value option for its loans held for sale. The Company's loans held for sale consist of one-to-four family mortgage loans, none of which was 90 days or more past due at June 30, 2014. Management believes that the mortgage banking business operates on a short-term cycle. Therefore, in order to reflect the most relevant valuations for the key components of this business, and to reduce timing differences in amounts recognized in earnings, the Company has elected to record loans held for sale at fair value to match the recognition of IRLCs, MSRIs, and derivatives, all of which are recorded at fair value in earnings. Fair value is based on independent quoted market prices of mortgage-backed securities comprised of loans with similar features to those of the Company's loans held for sale, where available, and adjusted as necessary for such items as servicing value, guaranty fee premiums, and credit spread adjustments.

Table of Contents

The following table reflects the difference between the fair value carrying amount of loans held for sale for which the Company has elected the fair value option, and the unpaid principal balance:

	June 30, 2014			December 31, 2013		
	Fair Value Carrying Amount	Aggregate Unpaid Principal	Fair Value Carrying Amount Less Aggregate Unpaid Principal	Fair Value Carrying Amount	Aggregate Unpaid Principal	Fair Value Carrying Amount Less Aggregate Unpaid Principal
(in thousands)						
Loans held for sale	\$308,895	\$298,154	\$10,741	\$306,915	\$303,805	\$3,110

Gains and Losses Included in Income for Assets Where the Fair Value Option Has Been Elected

The assets accounted for under the fair value option are initially measured at fair value. Gains and losses from the initial measurement and subsequent changes in fair value are recognized in earnings.

The following table presents the changes in fair value related to initial measurement, and the subsequent changes in fair value included in earnings, for loans held for sale and MSR's for the periods indicated:

	Gain (Loss) Included in Mortgage Banking Income from Changes in Fair Value ⁽¹⁾			
	For the Three Months Ended June 30,		For the Six Months Ended June 30,	
	2014	2013	2014	2013
(in thousands)				
Loans held for sale	\$ 5,267	\$ (24,437)	\$ 6,934	\$ (14,765)
Mortgage servicing rights	(16,364)	19,038	(26,186)	15,766
Total (loss) gain	\$ (11,097)	\$ (5,399)	\$ (19,252)	\$ 1,001

(1) Does not include the effect of hedging activities.

The Company has determined that there is no instrument-specific credit risk related to its loans held for sale, due to the short duration of such assets.

Table of Contents**Changes in Level 3 Fair Value Measurements**

The following tables present, for the six months ended June 30, 2014 and 2013, a roll-forward of the balance sheet amounts (including changes in fair value) for financial instruments classified in Level 3 of the valuation hierarchy:

(in thousands)	Fair Value January 1, 2014	Total Realized/Unrealized Gains/(Losses) Recorded in Comprehensive				Transfers to/(from) Level 3	Fair Value at June 30, 2014	Change in Unrealized Gains/(Losses) Related to Instruments Held at June 30, 2014
		Income/ (Loss)	(Loss) Income	Issuances	Settlements			
Mortgage servicing rights	\$241,018	\$(26,186)	\$ --	\$13,983	\$ --	\$ --	\$228,815	\$ (492)
Interest rate lock commitments	258	3,634	--	--	--	--	3,892	3,892

(in thousands)	Fair Value January 1, 2013	Total Realized/Unrealized Gains/(Losses) Recorded in Comprehensive				Transfers to/(from) Level 3	Fair Value at June 30, 2013	Change in Unrealized Gains/(Losses) Related to Instruments Held at June 30, 2013
		Income/ (Loss)	(Loss) Income	Issuances	Settlements			
Available-for-sale capital securities	\$ 18,569	\$ --	\$1,324	\$ --	\$ --	\$ --	\$ 19,893	\$ 1,324
Mortgage servicing rights	144,520	15,766	--	54,673	--	--	214,959	47,848
Interest rate lock commitments	21,446	(28,099)	--	--	--	--	(6,653)	(6,541)

The Company's policy is to recognize transfers in and out of Levels 1, 2, and 3 as of the end of the reporting period. There were no transfers in or out of Level 3 during the six months ended June 30, 2014 or 2013. During the six months ended June 30, 2013, the Company transferred certain preferred stock to Level 2 from Level 1 as a result of decreased observable market activity for these securities. There were no gains or losses recognized as a result of the transfer of securities during the six months ended June 30, 2013.

Table of Contents

For Level 3 assets and liabilities measured at fair value on a recurring basis as of June 30, 2014, the significant unobservable inputs used in the fair value measurements were as follows:

(dollars in thousands)	Fair Value at June 30, 2014	Valuation Technique	Significant Unobservable Inputs	Significant Unobservable Input Value
Mortgage Servicing Rights	\$228,815	Discounted Cash Flow	Weighted Average Constant Prepayment Rate ⁽¹⁾	8.70%
			Weighted Average Discount Rate	10.00
Interest Rate Lock Commitments	3,892	Pricing Model	Weighted Average Closing Ratio	74.31

(1) Represents annualized loan repayment rate assumptions.

The significant unobservable inputs used in the fair value measurement of the Company's MSR's are the weighted average constant prepayment rate and the weighted average discount rate. Significant increases or decreases in either of those inputs in isolation could result in significantly lower or higher fair value measurements. Although the constant prepayment rate and the discount rate are not directly interrelated, they generally move in opposite directions.

The significant unobservable input used in the fair value measurement of the Company's IRLC's is the closing ratio, which represents the percentage of loans currently in an interest rate lock position that management estimates will ultimately close. Generally, the fair value of an IRLC is positive if the prevailing interest rate is lower than the IRLC rate, and the fair value of an IRLC is negative if the prevailing interest rate is higher than the IRLC rate. Therefore, an increase in the closing ratio (i.e., a higher percentage of loans estimated to close) will result in the fair value of the IRLC increasing if in a gain position, or decreasing if in a loss position. The closing ratio is largely dependent on the stage of processing that a loan is currently in, and the change in prevailing interest rates from the time of the interest rate lock.

Assets Measured at Fair Value on a Non-Recurring Basis

Certain assets are measured at fair value on a non-recurring basis. Such instruments are subject to fair value adjustments under certain circumstances (e.g., when there is evidence of impairment). The following tables present assets and liabilities that were measured at fair value on a non-recurring basis as of June 30, 2014 and December 31, 2013, and that were included in the Company's Consolidated Statements of Condition at those dates:

(in thousands)	Fair Value Measurements at June 30, 2014 Using			
	Quoted Prices in Active Markets for Identical Assets	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	Total Fair Value

	(Level 1)			
Certain impaired loans	\$--	\$ --	\$19,164	\$19,164
Other assets ⁽¹⁾	--	22,893	--	22,893
Total	\$--	\$22,893	\$19,164	\$42,057

(1) Represents the fair value of OREO, based on the appraised value of the collateral subsequent to its initial classification as OREO.

Fair Value Measurements at December 31, 2013 Using

(in thousands)	Quoted Prices in Active Markets for			Total Fair Value
	Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	
Certain impaired loans	\$--	\$ --	\$47,535	\$47,535
Other assets ⁽¹⁾	--	19,810	--	19,810
Total	\$--	\$19,810	\$47,535	\$67,345

(1) Represents the fair value of OREO, based on the appraised value of the collateral subsequent to its initial classification as OREO.

The fair values of collateral-dependent impaired loans are determined using various valuation techniques, including consideration of appraised values and other pertinent real estate market data.

Table of Contents**Other Fair Value Disclosures**

FASB guidance requires the disclosure of fair value information about the Company's on- and off-balance-sheet financial instruments. When available, quoted market prices are used as the measure of fair value. In cases where quoted market prices are not available, fair values are based on present-value estimates or other valuation techniques. Such fair values are significantly affected by the assumptions used, the timing of future cash flows, and the discount rate.

Because assumptions are inherently subjective in nature, estimated fair values cannot be substantiated by comparison to independent market quotes. Furthermore, in many cases, the estimated fair values provided would not necessarily be realized in an immediate sale or settlement of such instruments.

The following tables summarize the carrying values, estimated fair values, and fair value measurement levels of financial instruments that were not carried at fair value on the Company's Consolidated Statements of Condition at June 30, 2014 and December 31, 2013:

(in thousands)	Carrying Value	Estimated Fair Value	June 30, 2014		
			Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Financial Assets:					
Cash and cash equivalents	\$ 668,950	\$ 668,950	\$ 668,950	\$ --	\$ --
Securities held to maturity	7,547,911	7,622,751	--	7,614,289	8,462
FHLB stock ⁽¹⁾	571,708	571,708	--	571,708	--
Loans, net	34,702,395	35,256,509	--	--	35,256,509
Financial Liabilities:					
Deposits	\$ 27,352,469	\$ 27,373,609	\$ 20,633,293 ⁽²⁾	\$ 6,740,316 ⁽³⁾	\$ --
Borrowed funds	15,301,666	16,300,287	--	16,300,287	--

(1) Carrying value and estimated fair value are at cost.

(2) NOW and money market accounts, savings accounts, and non-interest-bearing accounts.

(3) Certificates of deposit.

(in thousands)	Carrying Value	Estimated Fair Value	December 31, 2013		
			Quoted Prices in Active Markets for Identical Assets	Significant Other Observable Inputs	Significant Unobservable Inputs (Level 3)

			(Level 1)	(Level 2)	
Financial Assets:					
Cash and cash equivalents	\$ 644,550	\$ 644,550	\$ 644,550	\$ --	\$ --
Securities held to maturity	7,670,282	7,445,244	--	7,438,091	7,153

Borrowed funds	15,105,002	16,058,931	--	16,058,931	--

(1) Carrying value and estimated fair value are at cost.

(2) NOW and money market accounts, savings accounts, and non-interest-bearing accounts.

(3) Certificates of deposit.

The methods and significant assumptions used to estimate fair values for the Company's financial instruments follow:

Cash and Cash Equivalents

Cash and cash equivalents include cash and due from banks and fed funds sold. The estimated fair values of cash and cash equivalents are assumed to equal their carrying values, as these financial instruments are either due on demand or have short-term maturities.

Table of Contents

Securities

If quoted market prices are not available for a specific security, then fair values are estimated by using pricing models, quoted prices of securities with similar characteristics, or discounted cash flows. These pricing models primarily use market-based or independently sourced market parameters as inputs, including, but not limited to, yield curves, interest rates, equity or debt prices, and credit spreads. In addition to observable market information, pricing models also incorporate transaction details such as maturity and cash flow assumptions.

Federal Home Loan Bank Stock

Ownership in equity securities of the FHLB is restricted and there is no established market for their resale. The carrying amount approximates the fair value.

Loans

The loan portfolio is segregated into various components for valuation purposes in order to group loans based on their significant financial characteristics, such as loan type (mortgage or other) and payment status (performing or non-performing). The estimated fair values of mortgage and other loans are computed by discounting the anticipated cash flows from the respective portfolios. The discount rates reflect current market rates for loans with similar terms to borrowers of similar credit quality. The estimated fair values of non-performing mortgage and other loans are based on recent collateral appraisals.

The methods used to estimate the fair value of loans are extremely sensitive to the assumptions and estimates used. While management has attempted to use assumptions and estimates that best reflect the Company's loan portfolio and current market conditions, a greater degree of subjectivity is inherent in these values than in those determined in active markets. Accordingly, readers are cautioned in using this information for purposes of evaluating the financial condition and/or value of the Company in and of itself or in comparison with any other company.

Mortgage Servicing Rights

MSRs do not trade in an active market with readily observable prices. Accordingly, the Company utilizes a valuation model that calculates the present value of estimated future cash flows. The model incorporates various assumptions, including estimates of prepayment speeds, discount rates, refinance rates, servicing costs, and ancillary income. The Company reassesses and periodically adjusts the underlying inputs and assumptions to reflect current market conditions and assumptions that a market participant would consider in valuing the MSR asset.

Derivative Financial Instruments

For exchange-traded futures and exchange-traded options, fair value is based on observable quoted market prices in an active market. For forward commitments to buy and sell loans and mortgage-backed securities, fair value is based on observable market prices for similar loans and securities in an active market. The fair value of IRLCs for one-to-four family mortgage loans that the Company intends to sell is based on internally developed models. The key model inputs primarily include the sum of the value of the forward commitment based on the loans' expected settlement dates, the value of MSRs arrived at by an independent MSR broker, government agency price adjustment factors, and historical IRLC fall-out factors.

Deposits

The fair values of deposit liabilities with no stated maturity (i.e., NOW and money market accounts, savings accounts, and non-interest-bearing accounts) are equal to the carrying amounts payable on demand. The fair values of certificates of deposit (CDs) represent contractual cash flows, discounted using interest rates currently offered on deposits with similar characteristics and remaining maturities. These estimated fair values do not include the intangible value of core deposit relationships, which comprise a significant portion of the Company's deposit base.

Borrowed Funds

The estimated fair value of borrowed funds is based either on bid quotations received from securities dealers or the discounted value of contractual cash flows with interest rates currently in effect for borrowed funds with similar maturities and structures.

Off-Balance-Sheet Financial Instruments

The fair values of commitments to extend credit and unadvanced lines of credit are estimated based on an analysis of the interest rates and fees currently charged to enter into similar transactions, considering the remaining terms of the commitments and the creditworthiness of the potential borrowers. The estimated fair values of such off-balance-sheet financial instruments were insignificant at June 30, 2014 and December 31, 2013.

Table of Contents**Note 12. Derivative Financial Instruments**

The Company's derivative financial instruments consist of financial forward and futures contracts, IRLCs, and options. These derivatives relate to mortgage banking operations, MSRs, and other risk management activities, and seek to mitigate or reduce the Company's exposure to losses from adverse changes in interest rates. These activities will vary in scope based on the level and volatility of interest rates, the type of assets held, and other changing market conditions.

In accordance with the applicable accounting guidance, the Company takes into account the impact of collateral and master netting agreements that allow it to settle all derivative contracts held with a single counterparty on a net basis, and to offset the net derivative position with the related collateral when recognizing derivative assets and liabilities. As a result, the Company's Statements of Financial Condition could reflect derivative contracts with negative fair values included in derivative assets, and contracts with positive fair values included in derivative liabilities.

The Company held derivatives with a notional amount of \$2.2 billion at June 30, 2014. Changes in the fair value of these derivatives are reflected in current-period earnings. None of these derivatives are designated as hedges for accounting purposes.

The following table sets forth information regarding the Company's derivative financial instruments at June 30, 2014:

(in thousands)	June 30, 2014		
	Notional Amount	Unrealized ⁽¹⁾ Gain	Loss
Treasury options	\$ 505,000	\$ 141	\$ 438
Eurodollar futures	145,000	--	132
Forward commitments to sell loans/mortgage-backed securities	610,000	26	5,126
Forward commitments to buy loans/mortgage-backed securities	545,000	4,956	28
Interest rate lock commitments	419,478	3,892	--
Total derivatives	\$ 2,224,478	\$ 9,015	\$ 5,724

(1) Derivatives in a net gain position are recorded as Other assets and derivatives in a net loss position are recorded as Other liabilities in the Consolidated Statements of Condition.

The Company uses various financial instruments, including derivatives, in connection with its strategies to reduce pricing risk resulting from changes in interest rates. Derivative instruments may include IRLCs entered into with borrowers or correspondents/brokers to acquire agency-conforming fixed and adjustable rate residential mortgage loans that will be held for sale. Other derivative instruments include Treasury options and Eurodollar futures.

The Company enters into forward contracts to sell fixed rate mortgage-backed securities to protect against changes in the prices of agency-conforming fixed rate loans held for sale. Forward contracts are entered into with securities dealers in an amount related to the portion of IRLCs that is expected to close. The value of these forward sales contracts moves inversely with the value of the loans in response to changes in interest rates.

To manage the price risk associated with fixed rate non-conforming mortgage loans, the Company generally enters into forward contracts on mortgage-backed securities or forward commitments to sell loans to approved investors. Short positions in Eurodollar futures contracts are used to manage price risk on adjustable rate mortgage loans held for sale.

The Company also purchases put and call options to manage the risk associated with variations in the amount of IRLCs that ultimately close.

In addition, the Company mitigates a portion of the risk associated with changes in the value of MSRs. The general strategy for mitigating this risk is to purchase derivative instruments, the value of which changes in the opposite direction of interest rates, thus partially offsetting changes in the value of our servicing assets, which tends to move in the same direction as interest rates. Accordingly, the Company purchases Eurodollar futures and call options on Treasury securities, and enters into forward contracts to purchase mortgage-backed securities.

Table of Contents

The following table sets forth the effect of derivative instruments on the Consolidated Statements of Income and Comprehensive Income for the periods indicated:

(in thousands)	Gain (Loss) Included in Mortgage Banking Income			
	For the Three Months Ended		For the Six Months Ended	
	June 30,		June 30,	
	2014	2013	2014	2013
Treasury options	\$1,454	\$(3,368)	\$1,055	\$(6,956)
Eurodollar futures	161	(11)	106	4
Forward commitments to buy/sell loans/mortgage-backed securities	3,038	21,905	6,533	30,884
Total gain	\$4,653	\$18,526	\$7,694	\$23,932

The Company has in place an enforceable master netting arrangement with every counterparty. All master netting arrangements include rights to offset associated with the Company's recognized derivative assets, derivative liabilities, and cash collateral received and pledged. Accordingly, the Company, where appropriate, offsets all derivative asset and liability positions with the cash collateral received and pledged.

The following tables present the effect the master netting arrangements had on the presentation of the derivative assets in the Consolidated Statements of Financial Condition as of the dates indicated:

June 30, 2014

(in thousands)	Gross Amounts of Recognized Assets	Gross Amounts Offset in the Statement of Condition	Net Amounts of Assets Presented in the Statement of Condition	Gross Amounts Not Offset in the Consolidated Statement of Condition		
				Financial Instruments	Cash Collateral Received	Net Amount
Derivatives	\$11,573	\$4,324	\$7,249	\$--	\$--	\$7,249

December 31, 2013

(in thousands)	Gross Amounts of Recognized Assets	Gross Amounts Offset in the Statement of Condition	Net Amounts of Assets Presented in the Statement of Condition	Gross Amounts Not Offset in the Consolidated Statement of Condition		
				Financial Instruments	Cash Collateral Received	Net Amount
Derivatives	\$6,680	\$4,848	\$1,832	\$--	\$--	\$1,832

Table of Contents

				Financial Instruments	Cash Collateral Pledged	Net Amount
Derivatives	\$8,012	\$7,624	\$388	\$--	\$--	\$388

Note 13. Segment Reporting

The Company's operations are divided into two reportable business segments: Banking Operations and Residential Mortgage Banking. These operating segments have been identified based on the Company's organizational structure. The segments require unique technology and marketing strategies, and offer different products and services. While the Company is managed as an integrated organization, individual executive managers are held accountable for the operations of these business segments.

The Company measures and presents information for internal reporting purposes in a variety of ways. The internal reporting system presently used by management in the planning and measurement of operating activities, and to which most managers are held accountable, is based on organizational structure.

The management accounting process uses various estimates and allocation methodologies to measure the performance of the operating segments. To determine financial performance for each segment, the Company allocates capital, funding charges and credits, certain non-interest expenses, and income tax provisions to each segment, as applicable. Allocation methodologies are subject to periodic adjustment as the internal management accounting system is revised and/or as business or product lines within the segments change. In addition, because the development and application of these methodologies is a dynamic process, the financial results presented may be periodically revised.

The Company seeks to maximize shareholder value by, among other means, optimizing the return on stockholders equity and managing risk. Capital is assigned to each segment, the combination of which is equivalent to the Company's consolidated total, on an economic basis, using management's assessment of the inherent risks associated with the segment. Capital allocations are made to cover the following risk categories: credit risk, liquidity risk, interest rate risk, option risk, basis risk, market risk, and operational risk.

The Company allocates expenses to the reportable segments based on various factors, including the volume and amount of loans produced and the number of full-time equivalent employees. Income taxes are allocated to the various segments based on taxable income and statutory rates applicable to the segment.

Banking Operations Segment

The Banking Operations segment serves consumers and businesses by offering and servicing a variety of loan and deposit products and other financial services.

Table of Contents**Residential Mortgage Banking Segment**

The Residential Mortgage Banking segment originates, aggregates, sells, and services one-to-four family mortgage loans. Mortgage loan products consist primarily of agency-conforming fixed- and adjustable-rate loans and, to a lesser extent, jumbo hybrid loans, for the purpose of purchasing or refinancing one-to-four family homes. The Residential Mortgage Banking segment earns interest on loans held in the warehouse and non-interest income from the origination and servicing of loans. It also recognizes gains or losses on the sale of such loans.

The following table provides a summary of the Company's segment results for the three months ended June 30, 2014, on an internally managed accounting basis:

(in thousands)	For the Three Months Ended June 30, 2014		
	Banking Operations	Residential Mortgage Banking	Total Company

(1) Includes ancillary fee income.

(2) Includes both direct and indirect expenses.

Table of Contents**Note 14. Impact of Recent Accounting Pronouncements**

In June 2014, the FASB issued ASU No. 2014-11, *Transfers and Servicing (Topic 860) Repurchase-to-Maturity Transactions, Repurchase Financings, and Disclosures*. The amendments in ASU No. 2014-11 require that repurchase-to-maturity transactions be accounted for as secured borrowings consistent with the accounting for other repurchase agreements. In addition, the amendments require separate accounting for a transfer of a financial asset executed contemporaneously with a repurchase agreement with the same counterparty (a repurchase financing), which will result in secured borrowing accounting for the repurchase agreement. The amendments require an entity to disclose information about transfers accounted for as sales in transactions that are economically similar to repurchase agreements, in which the transferor retains substantially all of the exposure to the economic return on the transferred financial asset throughout the term of the transaction. In addition, the amendments require disclosure of the types of collateral pledged in repurchase agreements, securities lending transactions, and repurchase-to-maturity transactions and the tenor of those transactions. The accounting changes in ASU No. 2014-11 are effective for the first interim or annual period beginning after December 15, 2014. The disclosure for certain transactions accounted for as sales is required to be presented for interim and annual periods beginning after December 15, 2014, and the disclosure for repurchase agreements, securities lending transactions, and repurchase-to-maturity transactions accounted for as secured borrowings is required to be presented for annual periods beginning after December 15, 2014, and for interim periods beginning after March 15, 2015. The adoption of ASU No. 2014-11 is not expected to have a material effect on the Company's consolidated statement of condition or results of operations.

In May 2014, the FASB issued ASU No. 2014-09, *Revenue from Contracts with Customers (Topic 606)*. The amendments in ASU No. 2014-09 create Topic 606, *Revenue from Contracts with Customers*, and supersede the revenue recognition requirements in Topic 605, *Revenue Recognition*, including most industry-specific revenue recognition guidance throughout the Industry Topics of the Codification. In addition, the amendments supersede the cost guidance in Subtopic 605-35, *Revenue Recognition Construction-Type and Production-Type Contracts*, and create new Subtopic 340-40, *Other Assets and Deferred Costs Contracts with Customers*. In summary, the core principle of Topic 606 is that an entity recognizes revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services. ASU No. 2014-09 is effective for annual reporting periods beginning after December 15, 2016, including interim periods within that reporting period. Early application is not permitted. The Company is in the process of evaluating the effects the adoption of ASU No. 2014-09 may have on the Company's consolidated statement of condition or results of operations.

In January 2014, the FASB issued ASU No. 2014-01, *Investments Equity Method and Joint Ventures (Topic 323), Accounting for Investments in Qualified Affordable Housing Projects*. The amendments in ASU No. 2014-01 provide guidance on accounting for investments by a reporting entity in flow-through limited liability entities that manage or invest in affordable housing projects that qualify for low-income housing tax credits. The amendments permit reporting entities to make an accounting policy election to account for their investments in qualified affordable housing projects using the proportional amortization method, if certain conditions are met. ASU No. 2014-01 is effective for annual periods, and interim reporting periods within those annual periods, beginning after December 15, 2014, with early adoption permitted; it should be applied retrospectively to all periods presented. The Company adopted ASU No. 2014-01 on January 1, 2014. ASU No. 2014-01 calls for additional disclosures that will enable the reader to understand the nature of the investment and the effect of its measurement and related tax credits on a company's financial condition and results of operations. Please see Note 1, *Organization and Basis of Presentation*, for the presentation of such disclosures.

In January 2014, the FASB issued ASU No. 2014-04, *Receivables Troubled Debt Restructurings by Creditors (Subtopic 310-40), Reclassification of Residential Real Estate-Collateralized Consumer Mortgage Loans upon*

Foreclosure. The amendments in ASU No. 2014-04 clarify when an in-substance repossession or foreclosure occurs, i.e., when a creditor should be considered to have received physical possession of residential real estate property collateralizing a consumer mortgage loan such that the loan receivable should be derecognized and the real estate property recognized. ASU No. 2014-04 is effective for annual periods, and interim periods within those annual periods, beginning after December 15, 2014. The adoption of ASU No. 2014-04 is not expected to have a material effect on the Company's consolidated statement of condition or results of operations.

NEW YORK COMMUNITY BANCORP, INC.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS

OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

For the purpose of this discussion and analysis, the words we, us, our, and the Company are used to refer to New York Community Bancorp, Inc. and our consolidated subsidiaries, including New York Community Bank (the Community Bank) and New York Commercial Bank (the Commercial Bank) (collectively, the Banks).

Forward-Looking Statements and Associated Risk Factors

This report, like many written and oral communications presented by New York Community Bancorp, Inc. and our authorized officers, may contain certain forward-looking statements regarding our prospective performance and strategies within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. We intend such forward-looking statements to be covered by the safe harbor provisions for forward-looking statements contained in the Private Securities Litigation Reform Act of 1995, and are including this statement for purposes of said safe harbor provisions.

Forward-looking statements, which are based on certain assumptions and describe future plans, strategies, and expectations of the Company, are generally identified by use of the words anticipate, believe, estimate, expect, intend, plan, project, seek, strive, try, or future or conditional verbs such as will, would, should, could, may, or expressions. Our ability to predict results or the actual effects of our plans or strategies is inherently uncertain. Accordingly, actual results may differ materially from anticipated results.

There are a number of factors, many of which are beyond our control, that could cause actual conditions, events, or results to differ significantly from those described in our forward-looking statements. These factors include, but are not limited to:

- general economic conditions, either nationally or in some or all of the areas in which we and our customers conduct our respective businesses;
- conditions in the securities markets and real estate markets or the banking industry;
- changes in real estate values, which could impact the quality of the assets securing the loans in our portfolio;
- changes in interest rates, which may affect our net income, prepayment penalty income, mortgage banking income, and other future cash flows, or the market value of our assets, including our investment securities;
- changes in the quality or composition of our loan or securities portfolios;
- changes in our capital management policies, including those regarding business combinations, dividends, and share repurchases, among others;
- our use of derivatives to mitigate our interest rate exposure;
- changes in competitive pressures among financial institutions or from non-financial institutions;
- changes in deposit flows and wholesale borrowing facilities;
- changes in the demand for deposit, loan, and investment products and other financial services in the markets we serve;
- our timely development of new lines of business and competitive products or services in a changing environment, and the acceptance of such products or services by our customers;
- changes in our customer base or in the financial or operating performances of our customers' businesses;

any interruption in customer service due to circumstances beyond our control;
our ability to retain key personnel;
potential exposure to unknown or contingent liabilities of companies we have acquired or may acquire in the future;
the outcome of pending or threatened litigation, or of other matters before regulatory agencies, whether currently existing or commencing in the future;
environmental conditions that exist or may exist on properties owned by, leased by, or mortgaged to the Company;
any interruption or breach of security resulting in failures or disruptions in customer account management, general ledger, deposit, loan, or other systems;
operational issues stemming from, and/or capital spending necessitated by, the potential need to adapt to industry changes in information technology systems, on which we are highly dependent;
the ability to keep pace with, and implement on a timely basis, technological changes;
changes in legislation, regulation, policies, or administrative practices, whether by judicial, governmental, or legislative action, including, but not limited to, the Dodd-Frank Wall Street Reform and Consumer Protection Act, and other changes pertaining to banking, securities, taxation, rent regulation and housing, financial accounting and reporting, environmental protection, and insurance, and the ability to comply with such changes in a timely manner;

Table of Contents

changes in the monetary and fiscal policies of the U.S. Government, including policies of the U.S. Department of the Treasury and the Board of Governors of the Federal Reserve System;
changes in accounting principles, policies, practices, or guidelines;
a material breach in performance by the Community Bank under our loss sharing agreements with the FDIC;
changes in our estimates of future reserves based upon the periodic review thereof under relevant regulatory and accounting requirements;
changes in regulatory expectations relating to predictive models we use in connection with stress testing and other forecasting or in the assumptions on which such modeling and forecasting are predicated;
the ability to successfully integrate any assets, liabilities, customers, systems, and management personnel of any banks we may acquire into our operations, and our ability to realize related revenue synergies and cost savings within expected time frames;
changes in our credit ratings or in our ability to access the capital markets;
war or terrorist activities; and
other economic, competitive, governmental, regulatory, technological, and geopolitical factors affecting our operations, pricing, and services.

In addition, we routinely evaluate opportunities to expand through acquisitions and conduct due diligence activities in connection with such opportunities. As a result, acquisition discussions and, in some cases, negotiations, may take place at any time, and acquisitions involving cash or our debt or equity securities may occur.

Furthermore, the timing and occurrence or non-occurrence of events may be subject to circumstances beyond our control.

Please see Item 1A, Risk Factors, for a further discussion of factors that could affect the actual outcome of future events.

Readers are cautioned not to place undue reliance on the forward-looking statements contained herein, which speak only as of the date of this report. Except as required by applicable law or regulation, we undertake no obligation to update these forward-looking statements to reflect events or circumstances that occur after the date on which such statements were made.

Table of Contents**RECONCILIATIONS OF STOCKHOLDERS EQUITY AND TANGIBLE STOCKHOLDERS EQUITY; TOTAL ASSETS AND TANGIBLE ASSETS; AND THE RELATED MEASURES**

Although tangible stockholders equity, adjusted tangible stockholders equity, tangible assets, and adjusted tangible assets are not measures that are calculated in accordance with U.S. generally accepted accounting principles (GAAP), management uses these non-GAAP measures in their analysis of our performance. We believe that these non-GAAP measures are important indications of our ability to grow both organically and through business combinations and, with respect to tangible stockholders equity and adjusted tangible stockholders equity, our ability to pay dividends and to engage in various capital management strategies.

We calculate tangible stockholders equity by subtracting from stockholders equity the sum of our goodwill and core deposit intangibles (CDI), and calculate tangible assets by subtracting the same sum from our total assets. To calculate our ratio of tangible stockholders equity to tangible assets, we divide our tangible stockholders equity by our tangible assets, both of which include accumulated other comprehensive loss (AOCL). AOCL consists of after-tax net unrealized gains (losses) on securities and losses on pension and post-retirement obligations, and is recorded in our Consolidated Statements of Condition. We also calculate our ratio of tangible stockholders equity to tangible assets excluding AOCL, as its components are impacted by changes in market conditions, including interest rates, which fluctuate. This ratio is referred to in this report and below as the ratio of adjusted tangible stockholders equity to adjusted tangible assets.

Tangible stockholders equity, adjusted tangible stockholders equity, tangible assets, adjusted tangible assets, and the related tangible capital measures, should not be considered in isolation or as a substitute for stockholders equity or any other capital measure prepared in accordance with GAAP. Moreover, the manner in which we calculate these non-GAAP capital measures may differ from that of other companies reporting measures of capital with similar names.

Reconciliations of our stockholders equity, tangible stockholders equity, and adjusted tangible stockholders equity; our total assets, tangible assets, and adjusted tangible assets; and the related capital measures at June 30, 2014 and December 31, 2013 follow:

	June 30, 2014	December 31, 2013
(dollars in thousands)		
Stockholders Equity	\$ 5,761,018	\$ 5,735,662
Less: Goodwill	(2,436,131)	(2,436,131)
Core deposit intangibles, net	(11,835)	(16,240)
Tangible stockholders equity	\$ 3,313,052	\$ 3,283,291
Total Assets	\$48,604,772	\$46,688,287
Less: Goodwill	(2,436,131)	(2,436,131)
Core deposit intangibles, net	(11,835)	(16,240)
Tangible assets	\$46,156,806	\$44,235,916
Stockholders equity to total assets	11.85%	12.29%

Tangible stockholders equity to tangible assets	7.18%	7.42%
Tangible Stockholders Equity	\$3,313,052	\$3,283,291
Add back: Accumulated other comprehensive loss, net of tax	32,584	36,493
Adjusted tangible stockholders equity	\$3,345,636	\$3,319,784
Tangible Assets	\$46,156,806	\$44,235,916
Add back: Accumulated other comprehensive loss, net of tax	32,584	36,493
Adjusted tangible assets	\$46,189,390	\$44,272,409
Adjusted stockholders equity to adjusted tangible assets	7.24%	7.50%

Table of Contents

Executive Summary

New York Community Bancorp, Inc. is the holding company for New York Community Bank, with 243 branches in Metro New York, New Jersey, Ohio, Florida, and Arizona; and New York Commercial Bank, with 30 branches in Metro New York. With assets of \$48.6 billion at June 30, 2014, we rank among the 20 largest U.S. bank holding companies and, with deposits of \$27.4 billion at that date, we rank among its 25 largest depositories.

Both of our banks are New York State-chartered and both are subject to regulation by the FDIC, the Consumer Financial Protection Bureau, and the New York State Department of Financial Services. In addition, the holding company is subject to regulation by the Federal Reserve Board and to the requirements of the New York Stock Exchange, where shares of our common stock are traded under the symbol NYCB . As a bank holding company with assets of \$10.0 billion to \$50.0 billion, we are subject to heightened regulation under the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the Dodd-Frank Act).

As a publicly traded company, our mission is to provide our shareholders with a solid return on their investment by producing a strong financial performance, maintaining a solid capital position, and engaging in corporate strategies that enhance the value of their shares. In support of this mission, we maintain a business model that has been consistent over the course of decades, as described below:

We originate multi-family loans on non-luxury apartment buildings in New York City that are subject to rent regulation and feature below-market rents;

We underwrite our loans in accordance with conservative credit standards in order to maintain a high level of asset quality;

We operate at a high level of efficiency; and

We grow through accretive acquisitions of other financial institutions, branches, and/or deposits. The merits of this time-tested business model are reflected in the following achievements:

We are the leading producer of multi-family loans for portfolio in New York City;

We have produced a consistent record of above-average asset quality;

We consistently rank among the nation's most efficient bank holding companies; and

We have generated solid earnings and maintained a consistent position of capital strength.

In January 2010, we added a fifth component to our business model: originating one-to-four family mortgage loans through NYCB Mortgage Company, LLC, our mortgage banking subsidiary, and selling the vast majority of those loans to government-sponsored enterprises (GSEs), servicing retained.

Among the external factors that tend to influence our performance, the interest rate environment is key. Just as short-term interest rates affect the cost of our deposits and that of the funds we borrow, market interest rates affect the yields on the loans we produce for investment and the securities in which we invest. For example, the yield on our multi-family and commercial real estate (CRE) loans is typically tied to the five-year Constant Maturity Treasury rate (the CMT). In the second quarter of 2014, the average five-year CMT rose to 1.66% from 1.60% in the trailing quarter and from 0.91% in the year-earlier three months. The highs in the respective quarters were 1.80%, 1.77%, and 1.49% and the lows were 1.50%, 1.44%, and 0.65%, respectively.

In addition, residential mortgage interest rates impact the volume of one-to-four family mortgage loans we originate in any given quarter, in view of their impact on new home purchases and refinancing activity. Accordingly, when residential mortgage interest rates are low, refinancing activity typically increases; as residential mortgage interest rates begin to rise, the refinancing of one-to-four family mortgage loans typically declines.

The impact of market interest rates on our multi-family and CRE lending is far less overt than the impact on our production of one-to-four family mortgage loans. For example, in the three and six months ended June 30, 2014, we originated multi-family loans of \$2.1 billion and \$4.1 billion, representing 73.5% and 71.3%, respectively, of the held-for-investment loans we produced during that time. Reflecting the volume of loans we produced, and the offsetting impact of repayments, our portfolio of multi-family loans grew 4.0% and 7.8%, respectively, from the balances at the end of March and December to \$22.3 billion at June 30, 2014.

Table of Contents

In addition, because the multi-family and CRE loans we produce generate prepayment penalty income when they refinance or prepay, the impact of such activity can be meaningful. In the second quarter of 2014, we recorded prepayment penalty income of \$19.3 million, which contributed 19 basis points to the average yield on our interest-earning assets and 18 basis points to our net interest margin of 2.66%. While these contributions were comparable to those made in the trailing quarter, they were also significantly lower than the contributions made in the year-earlier three months. In the second quarter of 2013, our average yield and net interest margin benefited from a more robust level of prepayments, which more substantially tempered the impact of replenishing the balance sheet with lower-yielding loans and securities.

In the absence of any real increase in the five-year CMT, and in view of the pressure on spreads created by competition for loans in our primary market, our net interest margin declined in the three months ended June 30, 2014.

Also less overt, but nonetheless impacting our operations, has been the significant increase in regulation and supervision required under the Dodd-Frank Act, which was designed to reduce the risk of another economic crisis of the magnitude the nation experienced in 2008. Accordingly, we have allocated significant resources to enhancing our enterprise risk management program and capital planning, including through the process of stress testing our financial results.

Notwithstanding the impact of compliance-related expenses, we continue to operate efficiently. In the three months ended June 30, 2014, operating expenses totaled \$145.8 million, representing 1.22% of average assets and contributing to an efficiency ratio of 43.37%.

Because of our unique lending niche and our conservative underwriting standards, the losses on loans we experienced during and since the 2008 economic crisis have been well below the averages for our industry peers. At the end of June, our asset quality measures included a 0.32% ratio of non-performing non-covered assets to total non-covered assets, and a 0.25% ratio of non-performing non-covered loans to total non-covered loans. Furthermore, loans 30 to 89 days past due declined to \$4.0 million at the end of the current second quarter, contributing to a 26.1% decline in total delinquencies over the three-month period. We also recorded net recoveries of \$112,000 in the second quarter of this year.

Reflecting our asset quality and the adequacy of our allowance for non-covered loan losses, no provision for such losses was recorded in the current second quarter and, our allowance for non-covered loan losses represented 177.41% of non-performing non-covered loans at quarter-end.

While the markets we serve have experienced economic improvement, the pace of that improvement has been uneven, as the economic indicators presented below suggest.

The following table presents the unemployment rates for the United States and our key deposit markets in the months ended June 30, 2014, December 31, 2013, and June 30, 2013. While unemployment declined year-over-year in each of these markets, the six-month comparison reflects some inconsistency:

	For the Month Ended		
	June 30, 2014	December 31, 2013	June 30, 2013
Unemployment rate:			
United States	6.1%	6.7%	7.6%

Edgar Filing: NEW YORK COMMUNITY BANCORP INC - Form 10-Q

New York City	7.7	7.5	8.9
Arizona	7.5	7.3	8.5
Florida	6.2	5.9	7.4
New Jersey	6.4	6.7	9.0
New York	6.5	6.6	7.6
Ohio	5.9	6.6	7.5

(Source: U.S. Department of Labor)

Table of Contents

Yet another key economic indicator is the Consumer Price Index (the CPI), which measures the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services. The following table shows the change in the CPI for the twelve months ended at each of the indicated dates:

	For the Twelve Months Ended		
	June	December	June
	2014	2013	2013
Change in prices:	2.1%	1.5%	1.8%

The unevenness of the recovery is also reflected in the S&P/Case-Shiller Home Price Index for the twelve months ended May 2014, December 2013, and June 2013. Home prices rose 9.3% across the U.S. in the twelve months ended May 2014, as compared to 13.4% and 12.1%, respectively, for the twelve months ended December 2013 and June 2013. Given the impact that home prices have on residential mortgage lending, we believe the S&P/Case-Shiller Home Price Index is an important economic indicator for the Company.

In addition, the volume of new home sales nationwide was at a seasonally adjusted annual rate of 406,000 in June 2014, according to estimates set forth in a U.S. Commerce Department report issued on July 24, 2014. The June 2014 rate was 1.9% lower than the rate reported in December 2013 and 11.5% below the rate reported in June 2013.

Yet another pertinent economic indicator is the residential rental vacancy rate in New York and New Jersey, as reported by the U.S. Department of Commerce, and the office vacancy rate in Manhattan, as reported by a leading commercial real estate broker, Jones Lang LaSalle. These measures are important in view of the fact that 88.4% of our multi-family loans and 95.9% of our CRE loans are secured by properties in New York and New Jersey, with Manhattan accounting for 34.7% and 53.9% of our multi-family and CRE loans, respectively. As reflected in the following table, rental vacancy rates have improved in these markets over the indicated periods:

	For the Three Months Ended		
	June 30,	December 31,	June 30,
	2014	2013	2013
Residential rental vacancy rates:			
New Jersey	5.2%	7.4%	8.1%
New York	5.1	5.8	6.3
Manhattan office vacancy rate:	10.6	11.1	12.1

Notwithstanding the inconsistency in economic indices in the current second quarter, the Consumer Confidence Index[®] moved up to 86.4 in June 2014 from 77.5 in December and from 81.4 in June 2013. The June 2014 reading was the second highest for the Consumer Confidence Index since January 2008. An index level of 90 or more is considered indicative of a strong economy.

Against this backdrop, we generated earnings of \$118.7 million, or \$0.27 per diluted share, in the current second quarter, as compared to \$115.3 million, or \$0.26 per diluted share, in the trailing quarter and to \$122.5 million, or \$0.28 per diluted share, in the year-earlier three months. A detailed discussion and analysis of our performance in the three and six months ended June 30, 2014 follows.

Recent Events

On July 22, 2014, the Board of Directors declared a quarterly cash dividend of \$0.25 per share, payable on August 20, 2014 to shareholders of record at the close of business on August 8, 2014.

Critical Accounting Policies

We consider certain accounting policies to be critically important to the portrayal of our financial condition and results of operations, since they require management to make complex or subjective judgments, some of which may relate to matters that are inherently uncertain. The inherent sensitivity of our consolidated financial statements to these critical accounting policies, and the judgments, estimates, and assumptions used therein, could have a material impact on our financial condition or results of operations.

We have identified the following to be critical accounting policies: the determination of the allowances for loan losses; the valuation of mortgage servicing rights; the determination of whether an impairment of securities is other than temporary; the determination of the amount, if any, of goodwill impairment; and the determination of the valuation allowance for deferred tax assets.

Table of Contents

The judgments used by management in applying these critical accounting policies may be influenced by adverse changes in the economic environment, which may result in changes to future financial results.

Allowances for Loan Losses

Allowance for Losses on Non-Covered Loans

The allowance for losses on non-covered loans is increased by provisions for non-covered loan losses that are charged against earnings, and is reduced by net charge-offs and/or reversals, if any, that are credited to earnings. Although non-covered loans are held by either the Community Bank or the Commercial Bank, and a separate loan loss allowance is established for each, the total of the two allowances is available to cover all losses incurred. In addition, except as otherwise noted in the following discussion, the process for establishing the allowance for losses on non-covered loans is the same for each of the Community Bank and the Commercial Bank. In determining the respective allowances for loan losses, management considers the Community Bank's and the Commercial Bank's current business strategies and credit processes, including compliance with applicable regulatory guidelines and with guidelines approved by the respective Boards of Directors with regard to credit limitations, loan approvals, underwriting criteria, and loan workout procedures.

The allowance for losses on non-covered loans is established based on our evaluation of the probable inherent losses in our portfolio in accordance with GAAP, and is comprised of both specific valuation allowances and general valuation allowances.

Specific valuation allowances are established based on management's analyses of individual loans that are considered impaired. If a non-covered loan is deemed to be impaired, management measures the extent of the impairment and establishes a specific valuation allowance for that amount. A non-covered loan is classified as impaired when, based on current information and events, it is probable that we will be unable to collect both the principal and interest due under the contractual terms of the loan agreement. We apply this classification as necessary to non-covered loans individually evaluated for impairment in our portfolios of multi-family; commercial real estate; acquisition, development, and construction; and commercial and industrial loans. Smaller-balance homogenous loans and loans carried at the lower of cost or fair value are evaluated for impairment on a collective, rather than individual, basis.

We generally measure impairment on an individual loan and determine the extent to which a specific valuation allowance is necessary by comparing the loan's outstanding balance to either the fair value of the collateral, less the estimated cost to sell, or the present value of expected cash flows, discounted at the loan's effective interest rate. A specific valuation allowance is established when the fair value of the collateral, net of the estimated costs to sell, or the present value of the expected cash flows is less than the recorded investment in the loan.

We also follow a process to assign general valuation allowances to non-covered loan categories. General valuation allowances are established by applying our loan loss provisioning methodology, and reflect the inherent risk in outstanding held-for-investment loans. This loan loss provisioning methodology considers various factors in determining the appropriate quantified risk factors to use to determine the general valuation allowances. The factors assessed begin with the historical loan loss experience for each of the major loan categories maintained. Our historical loan loss experience is then adjusted by considering qualitative or environmental factors that are likely to cause estimated credit losses associated with the existing portfolio to differ from historical loss experience, including, but not limited to:

Changes in lending policies and procedures, including changes in underwriting standards and collection, charge-off, and recovery practices;

Changes in international, national, regional, and local economic and business conditions and developments that affect the collectability of the portfolio, including the condition of various market segments;

Changes in the nature and volume of the portfolio and in the terms of loans;

Changes in the volume and severity of past due loans, the volume of non-accrual loans, and the volume and severity of adversely classified or graded loans;

Changes in the quality of our loan review system;

Changes in the value of the underlying collateral for collateral-dependent loans;

The existence and effect of any concentrations of credit, and changes in the level of such concentrations;

Changes in the experience, ability, and depth of lending management and other relevant staff; and

The effect of other external factors, such as competition and legal and regulatory requirements, on the level of estimated credit losses in the existing portfolio.

Table of Contents

By considering the factors discussed above, we determine quantifiable risk factors that are applied to each non-impaired loan or loan type in the loan portfolio to determine the general valuation allowances.

In 2014, we changed the historical loss period we use to determine the allowance for loan losses on non-covered loans to a rolling 16-quarter look-back period, as we believe this to be a more appropriate reflection of the Company's historical loss experience. This change has not had a significant effect on the allowance for losses on non-covered loans, nor is it expected to do so.

The process of establishing the allowance for losses on non-covered loans also involves:

Periodic inspections of the loan collateral by qualified in-house and external property appraisers/inspectors, as applicable;

Regular meetings of executive management with the pertinent Board committee, during which observable trends in the local economy and/or the real estate market are discussed;

Assessment of the aforementioned factors by the pertinent members of the Boards of Directors and management when making a business judgment regarding the impact of anticipated changes on the future level of loan losses; and

Analysis of the portfolio in the aggregate, as well as on an individual loan basis, taking into consideration payment history, underwriting analyses, and internal risk ratings.

In order to determine their overall adequacy, each of the respective non-covered loan loss allowances is reviewed quarterly by management and by the Mortgage and Real Estate Committee of the Community Bank's Board of Directors (the Mortgage Committee) or the Credit Committee of the Board of Directors of the Commercial Bank (the Credit Committee), as applicable.

We charge off loans, or portions of loans, in the period that such loans, or portions thereof, are deemed uncollectible. The collectability of individual loans is determined through an assessment of the financial condition and repayment capacity of the borrower and/or through an estimate of the fair value of any underlying collateral. Generally, the time period in which this assessment is made is within the same quarter that the loan is considered impaired and quarterly thereafter. For non-real estate-related consumer credits, the following past-due time periods determine when charge-offs are typically recorded: (1) closed-end credits are charged off in the quarter that the loan becomes 120 days past due; (2) open-end credits are charged off in the quarter that the loan becomes 180 days past due; and (3) both closed-end and open-end credits are typically charged off in the quarter that the credit is 60 days past the date we received notification that the borrower has filed for bankruptcy.

The level of future additions to the respective non-covered loan loss allowances is based on many factors, including certain factors that are beyond management's control such as changes in economic and local market conditions, including declines in real estate values, and increases in vacancy rates and unemployment. Management uses the best available information to recognize losses on loans or to make additions to the loan loss allowances; however, the Community Bank and/or the Commercial Bank may be required to take certain charge-offs and/or recognize further additions to their loan loss allowances, based on the judgment of regulatory agencies with regard to information provided to them during their examinations of the Banks.

Allowance for Losses on Covered Loans

We have elected to account for the loans acquired in the AmTrust Bank (AmTrust) and Desert Hills Bank (Desert Hills) acquisitions (i.e., our covered loans) based on expected cash flows. This election is in accordance with Financial

Accounting Standards Board (FASB) Accounting Standards Codification (ASC) Topic 310-30, Loans and Debt Securities Acquired with Deteriorated Credit Quality (ASC 310-30). In accordance with ASC 310-30, we maintain the integrity of a pool of multiple loans accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows.

Covered loans are reported exclusive of the FDIC loss share receivable. The covered loans acquired in the AmTrust and Desert Hills acquisitions are, and will continue to be, reviewed for collectability based on the expectations of cash flows from these loans. Covered loans have been aggregated into pools of loans with common characteristics. In determining the allowance for losses on covered loans, we periodically perform an analysis to estimate the expected cash flows for each of the loan pools. A provision for losses on covered loans is recorded to the extent that the expected cash flows from a loan pool have decreased for credit-related items since the acquisition date. Accordingly, during the loss share recovery period, if there is a decrease in expected cash flows due to an increase in estimated credit losses compared to the estimates made at the respective acquisition dates, the decrease in the present value of expected cash flows will be recorded as a provision for covered loan losses charged to earnings, and the allowance for covered loan losses will be increased. During the loss share recovery period, a related credit to non-interest income and an increase in the FDIC loss share receivable will be recognized at the same time, and will be measured based on the applicable loss sharing agreement percentage.

Table of Contents

Please see Note 6, Allowances for Loan Losses for a further discussion of our allowance for losses on covered loans as well as additional information about our allowance for losses on non-covered loans.

Mortgage Servicing Rights

We recognize the right to service mortgage loans for others as a separate asset referred to as mortgage servicing rights (MSRs). MSRs are generally recognized when one-to-four family loans are sold or securitized, servicing retained, and are initially recorded, and subsequently carried, at fair value.

We base the fair value of our MSRs on the present value of estimated future net servicing income cash flows, utilizing an internal valuation model. The model we utilize is based on assumptions that market participants would use to estimate fair value, including estimates of prepayment speeds, discount rates, default rates, refinance rates, servicing costs, escrow account earnings, contractual servicing fee income, and ancillary income. We reassess, and periodically adjust, these underlying inputs and assumptions to reflect market conditions and changes in the assumptions that a market participant would consider in valuing MSRs.

Changes in the fair value of MSRs occur primarily in connection with the collection/realization of expected cash flows, as well as changes in the valuation inputs and assumptions. Changes in the fair value of MSRs are reported in Mortgage banking income in the period during which such changes occur.

Investment Securities

The securities portfolio primarily consists of mortgage-related securities and, to a lesser extent, debt and equity (together, other) securities. Securities that are classified as available for sale are carried at their estimated fair value, with any unrealized gains or losses, net of taxes, reported as accumulated other comprehensive income or loss in stockholders' equity. Securities that we have the intent and ability to hold to maturity are classified as held to maturity and carried at amortized cost, less the non-credit portion of other-than-temporary impairment (OTTI) recorded in AOCL.

The fair values of our securities, and particularly our fixed-rate securities, are affected by changes in market interest rates and credit spreads. In general, as interest rates rise and/or credit spreads widen, the fair value of fixed-rate securities will decline; as interest rates fall and/or credit spreads tighten, the fair value of fixed-rate securities will rise. We regularly conduct a review and evaluation of our securities portfolio to determine if the decline in the fair value of any security below its carrying amount is other than temporary. If we deem any decline in value to be other than temporary, the security is written down to its current fair value, creating a new cost basis, and the resultant loss (other than the OTTI on debt securities attributable to non-credit factors) is charged against earnings and recorded in Non-interest income. Our assessment of a decline in fair value includes judgment as to the financial position and future prospects of the entity that issued the investment security, as well as a review of the security's underlying collateral. Broad changes in the overall market or interest rate environment generally will not lead to a write-down.

In accordance with OTTI accounting guidance, unless we have the intent to sell, or it is more likely than not that we may be required to sell a security before recovery, OTTI is recognized as a realized loss in earnings to the extent that the decline in fair value is credit-related. If there is a decline in fair value of a security below its carrying amount and we have the intent to sell it, or it is more likely than not that we may be required to sell the security before recovery, the entire amount of the decline in fair value is charged to earnings.

Goodwill Impairment

Goodwill is presumed to have an indefinite useful life and is tested for impairment, rather than amortized, at the reporting unit level, at least once a year. Goodwill would be tested in less than one year's time if there were a triggering event. There were no triggering events identified during the six months ended June 30, 2014.

The goodwill impairment analysis is a two-step test. However, a company can, under Accounting Standards Update (ASU) No. 2011-08, Testing Goodwill for Impairment, first assess qualitative factors to determine whether it is necessary to perform the two-step quantitative goodwill impairment test. Under this amendment, an entity would not be required to calculate the fair value of a reporting unit unless the entity determined, based on a qualitative assessment, that it was more likely than not that its fair value was less than its carrying amount. The Company did not elect to perform a qualitative assessment in 2013. The first step (Step 1) is used to identify potential impairment, and involves comparing each reporting segment's estimated fair value to its carrying amount, including goodwill. If the estimated fair value of a reporting segment exceeds its carrying amount, goodwill is not considered to be impaired. If the carrying amount exceeds the estimated fair value, there is an indication of potential impairment and the second step (Step 2) is performed to measure the amount.

Table of Contents

Step 2 involves calculating an implied fair value of goodwill for each reporting segment for which impairment was indicated in Step 1. The implied fair value of goodwill is determined in a manner similar to the amount of goodwill calculated in a business combination, i.e., by measuring the excess of the estimated fair value of the reporting segment, as determined in Step 1, over the aggregate estimated fair values of the individual assets, liabilities, and identifiable intangibles, as if the reporting segment were being acquired in a business combination at the impairment test date. If the implied fair value of goodwill exceeds the carrying amount of goodwill assigned to the reporting segment, there is no impairment. If the carrying amount of goodwill assigned to a reporting segment exceeds the implied fair value of the goodwill, an impairment charge is recorded for the excess. An impairment loss cannot exceed the carrying amount of goodwill assigned to a reporting segment, and the loss establishes a new basis in the goodwill. Subsequent reversal of goodwill impairment losses is not permitted.

Quoted market prices in active markets are the best evidence of fair value and are used as the basis for measurement, when available. Other acceptable valuation methods include present-value measurements based on multiples of earnings or revenues, or similar performance measures. Differences in the identification of reporting units and in valuation techniques could result in materially different evaluations of impairment.

For the purpose of goodwill impairment testing, management has determined that the Company has two reporting segments: Banking Operations and Residential Mortgage Banking. All of our recorded goodwill has resulted from prior acquisitions and, accordingly, is attributed to Banking Operations. There is no goodwill associated with Residential Mortgage Banking, as this segment was acquired in our FDIC-assisted AmTrust acquisition, which resulted in a bargain purchase gain. In order to perform our annual goodwill impairment test, we determined the carrying value of the Banking Operations segment to be the carrying value of the Company and compared it to the fair value of the Company.

We performed our annual goodwill impairment test as of December 31, 2013 and found no indication of goodwill impairment at that date.

Income Taxes

In estimating income taxes, management assesses the relative merits and risks of the tax treatment of transactions, taking into account statutory, judicial, and regulatory guidance in the context of our tax position. In this process, management also relies on tax opinions, recent audits, and historical experience. Although we use the best available information to record income taxes, underlying estimates and assumptions can change over time as a result of unanticipated events or circumstances such as changes in tax laws and judicial guidance influencing our overall or transaction-specific tax position.

We recognize deferred tax assets and liabilities for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases, and the carryforward of certain tax attributes such as net operating losses. A valuation allowance is maintained for deferred tax assets that we estimate are more likely than not to be unrealizable, based on available evidence at the time the estimate is made. In assessing the need for a valuation allowance, we estimate future taxable income, considering the prudence and feasibility of tax planning strategies and the realizability of tax loss carryforwards. Valuation allowances related to deferred tax assets can be affected by changes to tax laws, statutory tax rates, and future taxable income levels. In the event we were to determine that we would not be able to realize all or a portion of our net deferred tax assets in the future, we would reduce such amounts through a charge to income tax expense in the period in which that determination was made. Conversely, if we were to determine that we would be able to realize our deferred tax assets in the future in excess of the net carrying amounts, we would decrease the recorded valuation allowance through a decrease in income tax expense in the period in which that determination was made. Subsequently recognized tax

benefits associated with valuation allowances recorded in a business combination would be recorded as an adjustment to goodwill.

On March 31, 2014, new tax legislation that changed the manner in which financial institutions and their affiliates are taxed in New York State was enacted. The most significant changes affecting the Company are summarized below:

New York State tax is now determined by measuring the apportioned income of the combined group of all domestic affiliates of a New York taxpayer that participate in a unitary business relationship, rather than by applying differing rules based on the tax status of each affiliate;
Taxable income is apportioned to New York based on the location of the taxpayer's customers, with special rules for income from certain financial transactions. The location of the taxpayer's offices and bank branches will no longer be relevant to the determination of income apportioned to New York State;
The statutory tax rate was reduced from 7.1% to 6.5%; and
Thrift institutions that maintain a qualified residential loan portfolio are entitled to a specially computed modification reducing income taxable to New York.

Table of Contents

While most of the provisions of the new legislation are effective for fiscal years beginning in 2015, the statutory tax rate will not be reduced until 2016. The impact of a tax law change on the net deferred tax balance of a company is reflected in earnings in the quarter of enactment. In the first quarter of 2014, the recomputation of our deferred tax balance resulted in a one-time \$4.5 million charge to income tax expense. Although it is expected that the new laws will provide a modest reduction in our current tax expense beginning in 2015, the amount of the reduction will be affected by any changes in our operations, structure, or profitability.

Balance Sheet Summary

Total assets grew \$1.9 billion, or 4.1%, from the balance at the end of December to \$48.6 billion at June 30, 2014. The increase was the net effect of a \$2.0 billion rise in total loans, net to \$34.7 billion, and a \$158.1 million decline in total securities to \$7.8 billion. Loans, net represented 71.4% of total assets at the end of the second quarter and securities represented 16.0%.

The six-month increase in total assets and loans was largely funded by a \$1.7 billion, or 6.6%, rise in total deposits to \$27.4 billion and, to a lesser extent, by a \$196.6 million increase in wholesale borrowings to \$14.9 billion from the balance at year-end. At June 30, 2014 and December 31, 2013, deposits represented 56.3% and 55.0% of total assets, while wholesale borrowings represented 30.7% and 31.6% of total assets, respectively.

Stockholders' equity rose \$25.4 million in the first six months of this year to \$5.8 billion, representing 11.85% of total assets and a book value of \$13.01 per share at June 30, 2014. Tangible stockholders' equity rose \$29.8 million during this time, to \$3.3 billion, representing 7.18% of tangible assets and a tangible book value of \$7.48 per share. (Please see the discussion and reconciliations of stockholders' equity and tangible stockholders' equity; total assets and tangible assets; and the related capital measures that appear earlier in this report.)

Loans

At June 30, 2014, loans, net represented \$34.7 billion, or 71.4%, of total assets, a \$2.0 billion increase from the balance at December 31, 2013. Included in the June 30th amount were covered loans of \$2.6 billion; non-covered loans held for investment of \$32.0 billion; and non-covered loans held for sale of \$308.9 million, as more fully described below.

Covered Loans

Covered loans refers to the loans we acquired in our FDIC-assisted AmTrust and Desert Hills transactions, and are referred to as such because they are covered by loss sharing agreements with the FDIC. At June 30, 2014, covered loans represented \$2.6 billion, or 7.4%, of the total loan balance, a \$192.0 million reduction from the balance at December 31, 2013. The reduction was primarily due to repayments.

One-to-four family loans represented \$2.4 billion of total covered loans at the end of the second quarter, with all other loan types (primarily consisting of home equity lines of credit, or HELOCs) representing \$231.1 million, combined.

Covered one-to-four family loans include both fixed and adjustable rate loans. At June 30, 2014, \$1.8 billion, or 71.0%, of our covered loans were adjustable rate loans, with a weighted average interest rate of 3.35%. The remainder of the covered loan portfolio consisted of fixed rate loans at that date. The interest rates on the adjustable rate loans in the covered loan portfolio are indexed to the one-year LIBOR or the one-year Treasury rate, plus a spread in the range of 2% to 5%, subject to certain caps.

The AmTrust and Desert Hills loss sharing agreements each require the FDIC to reimburse us for 80% of losses up to a specified threshold, and for 95% of losses beyond that threshold, with respect to covered loans and covered other real estate owned (OREO).

Table of Contents**Geographical Analysis of the Covered Loan Portfolio**

The following table presents a geographical analysis of our covered loan portfolio at June 30, 2014:

(in thousands)

California	\$ 449,149
Florida	447,031
Arizona	206,941
Ohio	166,594
Massachusetts	122,739
Michigan	117,997
Illinois	91,715
New York	90,355
Maryland	68,703
New Jersey	60,686
Nevada	60,379
Minnesota	57,456
Colorado	56,303
All other states	600,611
Total covered loans	\$2,596,659

Non-Covered Loans Held for Investment

Non-covered loans held for investment totaled \$32.0 billion at the end of the second quarter, reflecting a \$2.1 billion, or 7.2%, increase from the balance at December 31, 2013. The June 30th balance represented 65.8% of total assets and 91.7% of total loans outstanding at that date. In addition to multi-family loans and CRE loans, the held-for-investment portfolio includes substantially smaller balances of one-to-four family loans, ADC loans, and other loans, with C&I loans comprising the bulk of the other loan portfolio. The vast majority of our non-covered loans held for investment consist of loans that we ourselves originated or, in some cases, acquired in business combinations prior to 2009.

In the first six months of 2014, originations of held-for-investment loans totaled \$5.7 billion, exceeding the year-earlier six-month volume by \$1.0 billion, or 21.5%. Included in the current six-month amount were second quarter originations of \$2.9 billion, reflecting a linked-quarter increase of \$53.0 million and a \$424.2 million increase year-over-year.

Multi-Family Loans

Multi-family loans are our principal asset. The loans we produce are primarily secured by non-luxury, residential apartment buildings in New York City that are rent-regulated and feature below-market rents a market we refer to as our primary lending niche. Consistent with our emphasis on multi-family lending, multi-family loan originations represented \$4.1 billion, or 71.3%, of the loans we produced in the first six months of this year for investment, exceeding the year-earlier six-month volume by \$1.1 billion, or 37.7%. Included in the current-six month amount were second quarter originations of \$2.1 billion, reflecting a linked-quarter increase of \$165.0 million and a year-over-year increase of \$713.9 million.

At June 30, 2014, the balance of multi-family loans represented \$22.3 billion, or 69.8%, of total non-covered loans held for investment, a \$1.6 billion increase from the balance at December 31, 2013. The average multi-family loan had a principal balance of \$4.8 million at the end of the second quarter, as compared to \$4.5 million at year-end.

The vast majority of our multi-family loans are made to long-term owners of buildings with apartments that are subject to rent regulation and feature below-market rents. Our borrowers typically use the funds we provide to make building-wide improvements and renovations to certain apartments, as a result of which they are able to increase the rents their tenants pay. In doing so, the borrower creates increased cash flows to borrow against in future years. We also make loans to building owners seeking to expand their real estate holdings with the purchase of additional properties.

In addition to underwriting multi-family loans on the basis of the buildings' income and condition, we consider the borrowers' credit history, profitability, and building management expertise. Borrowers are required to present evidence of their ability to repay the loan from the buildings' current rent rolls, their financial statements, and related documents.

Our multi-family loans typically feature a term of ten or twelve years, with a fixed rate of interest for the first five or seven years of the loan, and an alternative rate of interest in years six through ten or eight through twelve. The rate charged in the first five or seven years is generally based on intermediate-term interest rates plus a spread. During the remaining years, the loan resets to an annually adjustable rate that is tied to the prime rate of interest, plus a spread. Alternately, the borrower may opt for a fixed rate that is tied to the five-year fixed advance rate of the Federal Home Loan Bank of New York (the FHLB-NY), plus a spread. The fixed-rate option also requires the payment of one percentage point of the then-outstanding loan balance. In either case, the minimum rate at repricing is equivalent to the rate in the initial five- or seven-year term.

Table of Contents

As the rent roll increases, the typical property owner seeks to refinance the mortgage, and generally does so before the loan reprices in year six or eight. At June 30, 2014 and December 31, 2013, the expected weighted average life of the portfolio was 2.8 years and 2.9 years, respectively.

Multi-family loans that refinance within the first five or seven years are typically subject to an established prepayment penalty schedule. Depending on the remaining term of the loan at the time of prepayment, the penalties normally range from five percentage points to one percentage point of the then-current loan balance. If a loan extends past the fifth or seventh year and the borrower selects the fixed rate option, the prepayment penalties typically reset to a range of five points to one point over years six through ten or eight through twelve. For example, a ten-year multi-family loan that prepays in year three would generally be expected to pay a prepayment penalty equal to three percentage points of the remaining principal balance. A twelve-year multi-family loan that prepays in year one or two would generally be expected to pay a penalty equal to five percentage points.

Prepayment penalties are recorded as interest income and are therefore reflected in the average yields on our loans and assets, our interest rate spread and net interest margin, and the level of net interest income we record. No assumptions are involved in the recognition of prepayment penalty income, as such income is only recorded when cash is received.

Our success as a multi-family lender partly reflects the solid relationships we have developed with the market's leading mortgage brokers, who are familiar with our lending practices, our underwriting standards, and our long-standing practice of basing our loans on the cash flows produced by the properties. Because the multi-family market is largely broker-driven, the process of producing such loans is expedited, with loans generally taking four to six weeks to process.

At June 30, 2014, the vast majority of our multi-family loans were secured by rental apartment buildings. In addition, 76.1% of our multi-family loans were secured by buildings in New York City, with Manhattan accounting for the largest share. Of the loans secured by buildings outside New York City, other counties in the State of New York were home to 5.1%, while New Jersey and Pennsylvania accounted for 7.2% and 5.3%, respectively. The remaining 6.3% of multi-family loans were secured by buildings outside these markets, including the three other states (i.e., Ohio, Florida, and Arizona) served by our retail branch offices.

Our emphasis on multi-family loans is driven by several factors, including their structure, which reduces our exposure to interest rate volatility to some degree. Another factor driving our focus on multi-family lending has been the comparative quality of the loans we produce. Reflecting the nature of the buildings securing our loans, our underwriting standards, and the generally conservative loan-to-value ratios (LTVs) our multi-family loans feature at origination, a relatively small percentage of the multi-family loans that have transitioned to non-performing status have actually resulted in losses, even when the credit cycle has taken a downward turn.

We primarily underwrite our multi-family loans based on the current cash flows produced by the collateral property, with a reliance on the income approach to appraising the properties, rather than the sales approach. The sales approach is subject to fluctuations in the real estate market, as well as general economic conditions, and is therefore likely to be more risky in the event of a downward credit cycle turn. We also consider a variety of other factors, including the physical condition of the underlying property; the net operating income of the mortgaged premises prior to debt service and depreciation; the debt service coverage ratio (DSCR), which is the ratio of the property's net operating income to its debt service; and the ratio of the loan amount to the appraised value of the property (i.e., the LTV). The multi-family loans we are originating today generally represent no more than 75% of the lower of the appraised value or the sales price of the underlying property, and typically feature an amortization period of up to 30 years. In addition to typically requiring a minimum DSCR of 120% on multi-family buildings, we obtain a security interest in the personal property located on the premises, and an assignment of rents and leases.

Accordingly, while our multi-family lending niche has not been immune to downturns in the credit cycle, we continue to believe that the multi-family loans we produce involve less credit risk than certain other types of loans. In general, buildings that are subject to rent regulation have tended to be stable, with occupancy levels remaining more or less constant over time. Because the rents are typically below market and the buildings securing our loans are generally maintained in good condition, they have been more likely to retain their tenants in adverse economic times. In addition, we underwrite our multi-family loans on the basis of the current cash flows generated by the underlying properties, and generally exclude any short-term property tax exemptions and abatement benefits the property owners receive.

Table of Contents*Commercial Real Estate Loans*

In the first six months of 2014, CRE loans represented \$809.1 million, or 14.2%, of loans originated for investment, down \$247.6 million from the volume produced in the first six months of 2013. Included in the current six-month amount were second quarter originations of \$336.4 million, a \$136.2 million decrease from the trailing-quarter volume and a \$333.8 million decrease year-over-year.

Notwithstanding the decline in CRE loan production, the balance of CRE loans rose \$255.5 million from the balance at the end of December to \$7.6 billion at the end of June. The latter amount represented 23.8% of total loans held for investment, as compared to 24.7% at December 31st. At June 30, 2014 and December 31, 2013, the average CRE loan had a principal balance of \$4.9 million and \$4.7 million, respectively.

The CRE loans we produce are secured by income-producing properties such as office buildings, retail centers, mixed-use buildings, and multi-tenanted light industrial properties. At June 30, 2014, 73.5% of our CRE loans were secured by properties in New York City primarily in Manhattan while properties on Long Island accounted for 13.2%. Other counties in the State of New York were home to 2.7% of CRE loans outstanding, while New Jersey and Pennsylvania accounted for 6.5% and 1.5%, respectively. Properties outside New York, New Jersey, and Pennsylvania accounted for 2.6% of outstanding CRE loans.

The pricing of our CRE loans is similar to the pricing of our multi-family credits, i.e., with a fixed rate of interest for the first five or seven years of the loan that is generally based on intermediate-term interest rates plus a spread. During years six through ten or eight through twelve, the loan resets to an annually adjustable rate that is tied to the prime rate of interest, plus a spread. Alternately, the borrower may opt for a fixed rate that is tied to the five-year fixed advance rate of the FHLB-NY plus a spread. The fixed-rate option also requires the payment of an amount equal to one percentage point of the then-outstanding loan balance. In either case, the minimum rate at repricing is equivalent to the rate in the initial five- or seven-year term.

Prepayment penalties apply to our CRE loans, as they do our multi-family credits. Depending on the remaining term of the loan at the time of prepayment, the penalties normally range from five percentage points to one percentage point of the then-current loan balance. If a loan extends past the fifth or seventh year and the borrower selects the fixed rate option, the prepayment penalties typically reset to a range of five points to one point over years six through ten or eight through twelve. Our CRE loans tend to refinance within three to four years of origination; the expected weighted average life of the CRE portfolio was 3.3 years at both June 30, 2014 and December 31, 2013.

The repayment of loans secured by commercial real estate is often dependent on the successful operation and management of the underlying properties. To minimize our credit risk, we originate CRE loans in adherence with conservative underwriting standards, and require that such loans qualify on the basis of the property's current income stream and DSCR. The approval of a loan also depends on the borrower's credit history, profitability, and expertise in property management, and typically requires a minimum DSCR of 130% and a maximum LTV of 65%. In addition, the origination of CRE loans typically requires a security interest in the fixtures, equipment, and other personal property of the borrower and/or an assignment of the rents and/or leases.

One-to-Four Family Loans

We originate agency-conforming one-to-four family loans through our mortgage banking subsidiary and, for some states, directly through the Community Bank. The vast majority of the one-to-four family loans we produce are aggregated for sale with others produced by our mortgage banking clients throughout the nation. These loans are generally sold, servicing retained, to GSEs. (For more detailed information about our production of one-to-four family

loans for sale, please see *Non-Covered Loans Held for Sale* later in this discussion and analysis.)

For many years, the vast majority of our one-to-four family loans held for investment were loans we had acquired in our merger transactions prior to 2009. However, in 2012, we began to capitalize on our proprietary mortgage banking platform to originate one-to-four family loans for our own portfolio. Initially, the one-to-four family loans we produced for investment were all hybrid jumbo credits. In 2013, we began to retain some agency-conforming one-to-four family hybrid loans and select jumbo fixed rate loans. As a result, one-to-four family loans held for investment represented \$690.0 million, or 2.2%, of total loans held for investment at the end of the second quarter, exceeding the December 31st balance by \$129.2 million.

Acquisition, Development, and Construction Loans

ADC loans represented \$343.6 million, or 1.1%, of total loans held for investment at the end of the second quarter, comparable to the balance at December 31st. In the six months ended June 30, 2014, we originated ADC loans of \$72.5 million, down \$9.9 million from the volume produced in the year-earlier six-month period. Included in the current six-month amount were second quarter originations of \$16.5 million, as compared to \$55.9 million and \$49.0 million, respectively, in the trailing and year-earlier three months.

Table of Contents

At June 30, 2014, 72.0% of the loans in our ADC portfolio were for land acquisition and development; the remaining 28.0% consisted of loans that were provided for the construction of owner-occupied homes and commercial properties. Loan terms vary based upon the scope of the construction, and generally range from 18 to 24 months; they also feature a floating rate of interest tied to prime, with a floor. In addition, 79.6% of the loans in the ADC portfolio were for properties in New York City, with Manhattan accounting for more than half of New York City's share.

Because ADC loans are generally considered to have a higher degree of credit risk, especially during a downturn in the credit cycle, borrowers are required to provide a guarantee of repayment and completion. In the six months ended June 30, 2014 and 2013, we recovered losses against guarantees of \$80,000 and \$729,000, respectively; included in the current six-month total were second quarter recoveries against guarantees of \$40,000.

The risk of loss on an ADC loan is largely dependent upon the accuracy of the initial appraisal of the property's value upon completion of construction; the estimated cost of construction; and the estimated time to complete and/or sell or lease such property. If the appraised value proves to be inaccurate, the cost of completion is greater than expected, or the length of time to complete and/or sell or lease the collateral property is greater than anticipated, the property could have a value upon completion that is insufficient to assure full repayment of the loan. At June 30, 2014, 0.68% of the loans in our ADC loan portfolio were non-performing, as compared to 0.75% at December 31, 2013.

When applicable, as a condition to closing an ADC loan, it is our practice to require that residential properties be pre-sold or that borrowers secure permanent financing commitments from a recognized lender for an amount equal to, or greater than, the amount of our loan. In some cases, we ourselves may provide permanent financing. We typically require pre-leasing for ADC loans on commercial properties.

Other Loans

In the first six months of 2014, we originated other loans held for investment of \$579.1 million, as compared to \$398.1 million in the first six months of 2013. Included in the current six-month amount were second-quarter originations of \$321.5 million, exceeding the trailing-quarter and year-earlier volumes by \$64.0 million and \$82.3 million, respectively. Largely reflecting the increase in production, the balance of other loans rose to \$1.0 billion at the end of the second quarter from \$852.7 million at December 31st. The respective amounts represented 3.1% and 2.9% of total loans held for investment, and included C&I loans of \$966.9 million and \$813.7 million, respectively.

C&I loans accounted for \$575.9 million and \$394.8 million of other loans we originated in the first six months of 2014 and 2013, respectively. Included in the current six-month amount were second quarter originations of \$319.9 million, exceeding the trailing-quarter volume by \$63.9 million and the year-earlier volume by \$82.5 million. The increase in C&I originations from the year-earlier level was largely attributable to the establishment of NYCB Specialty Finance Company, LLC, in the second quarter of last year.

Located in Foxboro, Massachusetts, the subsidiary is staffed by a group of industry veterans with expertise in originating and underwriting senior secured debt. The subsidiary generally participates in syndicated loans and leases that are generated by our experienced staff, which has cultivated long-term relationships with a select group of nationally recognized financial institutions. Such loans and leases are generally made to large corporate obligors, the majority of which are publicly traded, carry investment grade or near-investment grade ratings, and participate in stable industries nationwide. The loans we fund fall into three distinct categories (asset-based lending, dealer floor plan lending, and equipment loan and lease financing) and each of our credits is secured with a perfected first security interest in the underlying collateral and structured as senior debt.

The pricing of our asset-based and dealer floor plan loans are at floating rates tied to LIBOR, while our equipment financing credits are at fixed rates at a spread over Treasuries. At June 30, 2014 and December 31, 2013, specialty finance loans and leases represented \$322.2 million and \$172.7 million of total C&I loans outstanding, including equipment leases of \$106.0 million and \$101.4 million, respectively. In addition, originations of specialty finance loans and leases totaled \$294.2 million in the current six-month period, including \$189.2 million in the second quarter of this year.

The other C&I loans we produce are primarily made to small, mid-size, and upper middle-market businesses in the five boroughs of New York City, as well as Long Island and New Jersey. At the end of June, other C&I loans represented \$644.7 million of total C&I loans held for investment, and \$281.7 million of total C&I loan originations in the first six months of this year.

Table of Contents

The other C&I loans we produce are tailored to meet the specific needs of our borrowers, and include term loans, demand loans, revolving lines of credit, letters of credit, and, to a lesser extent, loans that are partly guaranteed by the Small Business Administration. A broad range of other C&I loans, both collateralized and unsecured, are made available to businesses for working capital (including inventory and accounts receivable), business expansion, the purchase of machinery and equipment, and other general corporate needs. In determining the term and structure of other C&I loans, several factors are considered, including the purpose, the collateral, and the anticipated sources of repayment. Other C&I loans are typically secured by business assets and personal guarantees of the borrower, and include financial covenants to monitor the borrower's financial stability.

The interest rates on our other C&I loans can be fixed or floating, with floating rate loans being tied to prime or some other market index, plus an applicable spread. Our floating rate loans may or may not feature a floor rate of interest. The decision to require a floor on other C&I loans depends on the level of competition we face for such loans from other institutions, the direction of market interest rates, and the profitability of our relationship with the borrower.

An added benefit of other C&I lending is the opportunity to establish full-scale banking relationships with our borrowers. Many of our borrowers provide us with deposits, and many take advantage of our fee-based cash management, investment, and trade finance services.

The remainder of the other loan portfolio consists primarily of home equity loans and lines of credit, as well as consumer loans, most of which were originated by our pre-2009 merger partners prior to their joining the Company. We currently do not offer home equity loans or lines of credit.

Lending Authority

The loans we originate for investment are subject to federal and state laws and regulations, and are underwritten in accordance with loan underwriting policies and procedures approved by the Mortgage Committee, the Credit Committee, and the respective Boards of Directors.

In accordance with the Bank's policies, all loans are reviewed by the Mortgage Committee or the Credit Committee, as applicable, and all loans of \$10.0 million or more are reported to the respective Boards of Directors. At June 30, 2014, our largest loan was in the amount of \$262.5 million; the interest rate on the credit was 3.7% at that date. The loan was originated by the Community Bank on June 28, 2013 to the owner of a commercial office building located in Manhattan and, as of the date of this report, has been current since the origination date.

Geographical Analysis of the Portfolio of Non-Covered Loans Held for Investment

The following table presents a geographical analysis of the multi-family and CRE loans in our held-for-investment loan portfolio at June 30, 2014:

(dollars in thousands)	At June 30, 2014			
	Multi-Family Loans		Commercial Real Estate Loans	
	Amount	Percent of Total	Amount	Percent of Total
New York City:				
Manhattan	\$ 7,732,955	34.66%	\$ 4,108,892	53.92%

Edgar Filing: NEW YORK COMMUNITY BANCORP INC - Form 10-Q

Brooklyn	4,024,159	18.04	599,548	7.87
Bronx	2,576,076	11.54	196,357	2.58
Queens	2,576,661	11.55	656,082	8.61
Staten Island	64,848	0.29	41,804	0.55
Total New York City	\$16,974,699	76.08%	\$5,602,683	73.53%
Long Island	457,597	2.05	1,004,491	13.18
Other New York State	689,519	3.09	204,705	2.69
New Jersey	1,600,877	7.18	498,101	6.54
Pennsylvania	1,175,225	5.27	114,491	1.50
All other states	1,412,595	6.33	195,280	2.56
Total	\$22,310,512	100.00%	\$7,619,751	100.00%

In addition, the largest concentrations of one-to-four family loans and ADC loans in our portfolio of loans held for investment were located in California and New York City, and totaled \$342.5 million and \$273.4 million, respectively, at the end of June. The majority of our other loans held for investment were secured by properties and/or businesses located in Metro New York.

Table of Contents***Non-Covered Loans Held for Sale***

Although one-to-four family loans represented only 2.2% of total loans held for investment at the end of the current second quarter, we are actively engaged in the origination of one-to-four family loans for sale. Our mortgage banking business serves approximately 900 clients—community banks, credit unions, mortgage companies, and mortgage brokers—who utilize our proprietary web-accessible mortgage banking platform to originate full-documentation, prime credit one-to-four family loans throughout the United States.

With refinancing activity largely constrained by higher interest rates in the residential real estate market, originations of one-to-four family loans held for sale totaled \$1.3 billion in the current six-month period, as compared to \$4.4 billion in the year-earlier six-months. Included in the current six-month amount were second quarter originations of \$743.3 million, as compared to \$543.8 million and \$2.1 billion, respectively, in the trailing and year-earlier three months. Reflecting the decline in residential mortgage lending, the outstanding balance of loans held for sale was \$308.9 million at the end of the second quarter and \$306.9 million at December 31st.

The vast majority of the held-for-sale loans we produce are agency-conforming loans sold to GSEs. To a much lesser extent, we utilize our mortgage banking platform to originate fixed-rate jumbo loans under contract for sale to other financial institutions. Of the loans we originated for sale in the first six months of this year, all but \$49.6 million, or 3.9%, were agency-conforming. The latter amount consisted of non-conforming jumbo loans.

To mitigate the risks inherent in originating and selling residential mortgage loans, we utilize processes, proprietary technologies, and third-party software application tools that seek to ensure that the loans meet investors' program eligibility, underwriting, and collateral requirements. In addition, compliance verification and fraud detection tools are utilized throughout the processing, underwriting, and loan closing stages to assist in the determination that the loans we originate and acquire are in compliance with applicable local, state, and federal laws and regulations. Controlling, auditing, and validating the data upon which the credit decision is made (and the loan documents created) substantially mitigates the risk of our originating or acquiring a loan that subsequently is deemed to be in breach of loan sale representations and warranties made by us to loan investors.

We require the use of our proprietary processes, origination systems, and technologies for all loans we close. Collectively, these tools and processes are known internally as our proprietary Gemstone system. By mandating usage of Gemstone for all table-funded loan originations, we are able to tightly control key risk aspects across the spectrum of loan origination activities. Our clients access Gemstone via secure Internet protocols, and initiate the process by submitting required loan application data and other required income, asset, debt, and credit documents to us electronically. Key data is then verified by a combination of trusted third-party validations and internal reviews conducted by our loan underwriters and quality control specialists. Once key data is independently verified, it is locked down within the Gemstone system to further ensure the integrity of the transaction.

In addition, all trusted source third-party vendors are directly connected to the Gemstone system via secure electronic data interfaces. Within the Gemstone system, these trusted sources provide key risk and control services throughout the origination process, including ordering and receipt of credit report information, tax returns, independent collateral appraisals, private mortgage insurance certificates, automated underwriting and program eligibility determinations, flood insurance determination, fraud detection applications, local/state/federal regulatory compliance reviews, predatory or high cost loan reviews, and legal document preparation services. Our employees augment the automated system controls by performing audits during the process, which include the final underwriting of the loan file (the credit decision), and various other pre-funding and post-funding quality control reviews.

Both the agency-conforming and non-conforming (i.e., jumbo) one-to-four family loans we originate for sale require that we make certain representations and warranties with regard to the underwriting, documentation, and legal/regulatory compliance, and we may be required to repurchase a loan or loans if it is found that a breach of the representations and warranties has occurred. In such case, we would be exposed to any subsequent credit loss on the mortgage loans that might or might not be realized in the future.

As governed by our agreements with the GSEs and other third parties to whom we sell loans, the representations and warranties we make relate to several factors, including, but not limited to, the ownership of the loan; the validity of the lien securing the loan; the absence of delinquent taxes or liens against the property securing the loan as of its closing date; the process used to select the loan for inclusion in a transaction; and the loan's compliance with any applicable criteria, including underwriting standards, loan program guidelines, and compliance with applicable federal, state, and local laws.

Table of Contents

We record a liability for estimated losses relating to these representations and warranties, which is included in Other liabilities in the accompanying Consolidated Statements of Condition. The related expense is recorded in Mortgage banking income in the accompanying Consolidated Statements of Income and Comprehensive Income. At June 30, 2014 and 2013, the respective liabilities for estimated possible future losses relating to these representations and warranties were \$8.4 million and \$8.8 million. The methodology used to estimate the liability for representations and warranties is a function of the representations and warranties given and considers a variety of factors, including, but not limited to, actual default experience, estimated future defaults, historical loan repurchase rates and the frequency and potential severity of defaults, probability that a repurchase request will be received, and the probability that a loan will be required to be repurchased.

The following table sets forth the activity in our representation and warranty reserve during the periods indicated:

Representation and Warranty Reserve

	Three Months Ended		Six Months Ended	
	June 30,		June 30,	
	2014	2013	2014	2013
(in thousands)				
Balance, beginning of period	\$8,460	\$8,862	\$8,460	\$8,272
Losses charged to the reserve	(75)	(37)	(75)	(37)
Provision for estimated future losses based on:				
Loan sales	--	--	--	590
Change in estimates	--	--	--	--
Balance, end of period	\$8,385	\$8,825	\$8,385	\$8,825

Because the level of mortgage loan repurchase losses is dependent on economic factors, investor demand strategies, and other external conditions that may change over the lives of the underlying loans, the level of the liability for mortgage loan repurchase losses is difficult to estimate and requires considerable management judgment. However, we believe that the amount and range of reasonably possible losses in excess of our reserve would not be material to our operations or to our financial condition or results of operations.

Table of Contents**GSE Repurchase and Indemnification Requests Outstanding**

The following table sets forth our GSE indemnification and repurchase requests outstanding during the periods indicated:

(dollars in thousands)	For the Three Months Ended June 30,		2013	
	2014	2013	2014	2013
	Number of Loans	Amount ⁽¹⁾	Number of Loans	Amount ⁽¹⁾
Balance, beginning of period	17	\$ 3,823	16	\$ 3,549
New repurchase requests ⁽²⁾	20	4,585	18	4,476
Successful rebuttal/rescission	(13)	(2,170)	(16)	(2,952)
Indemnifications ⁽³⁾	--	--	(1)	(184)
Loan repurchases	(4)	(1,352)	(1)	(340)
Balance, end of period ⁽⁴⁾	20	\$ 4,886	16	\$ 4,549

(dollars in thousands)	For the Six Months Ended June 30,		2013	
	2014	2013	2014	2013
	Number of Loans	Amount ⁽¹⁾	Number of Loans	Amount ⁽¹⁾
Balance, beginning of period	18	\$ 4,057	20	\$ 5,073
New repurchase requests ⁽²⁾	38	8,889	47	10,946
Successful rebuttal/rescission	(26)	(5,480)	(45)	(10,305)
Indemnifications ⁽³⁾	--	--	(2)	(324)
Loan repurchases	(10)	(2,580)	(4)	(841)
Balance, end of period ⁽⁴⁾	20	\$ 4,886	16	\$ 4,549

(1) Represents the loan balance as of the repurchase request date.

(2) All requests relate to one-to-four family loans originated for sale.

(3) An indemnification agreement is an arrangement whereby the Company protects the GSEs against future losses.

(4) Of the twenty period-end requests as of June 30, 2014, nineteen were from Fannie Mae and one was from Freddie Mac. Both Fannie Mae and Freddie Mac allow 60 days to respond to a repurchase request. Failure to respond in a timely manner could result in the Company having an obligation to repurchase a loan.

Indemnified and Repurchased Loans Outstanding

The following table sets forth the activity of our indemnified and repurchased loans outstanding during the periods indicated:

For the Three Months Ended June 30,

(dollars in thousands)	2014		2013	
	Number of Loans	Amount ⁽¹⁾	Number of Loans	Amount
Balance, beginning of period	34	\$8,254	15	\$2,799
Indemnifications	--	--	1	184
Repurchases	4	1,352	1	340
Principal payoffs	(2)	(853)	(1)	(2)
Principal payments	--	(141)	--	(17)
Modifications/other	--	--	--	79
Balance, end of period ⁽¹⁾	36	\$8,612	16	\$3,383

(dollars in thousands)	For the Six Months Ended June 30,			
	2014		2013	
	Number of Loans	Amount ⁽¹⁾	Number of Loans	Amount
Balance, beginning of period	29	\$7,143	12	\$2,286
Indemnifications	--	--	2	324
Repurchases	10	2,580	4	841
Principal payoffs	(3)	(915)	(2)	(108)
Principal payments	--	(196)	--	(39)
Modifications/other	--	--	--	79
Balance, end of period ⁽¹⁾	36	\$8,612	16	\$3,383

(1) Of the thirty-six period-end loans, twenty-three loans, with an aggregate balance of \$5.0 million, were repurchased and are now held for investment. The other thirteen loans, with an aggregate balance of \$3.6 million, were indemnified and are all performing as of the date of this report.

Table of Contents

Please see **Asset and Liability Management** and the **Management of Interest Rate Risk** later in this report for a discussion of the strategies we employ to mitigate the interest rate risk associated with our production of one-to-four family loans for sale.

Outstanding Loan Commitments

At June 30, 2014, we had outstanding loan commitments of \$2.7 billion, a \$319.6 million increase from the balance at March 31st. Commitments to originate loans held for investment represented \$2.3 billion of the June 30th total, and commitments to originate loans held for sale represented the remaining \$419.6 million. At March 31, 2014, the respective commitments were \$2.1 billion and \$312.2 million, respectively.

Multi-family and CRE loans together represented \$1.2 billion of held-for-investment loan commitments at the end of the second quarter, while one-to-four family, ADC, and other loans represented \$474.8 million, \$289.6 million, and \$761.8 million, respectively. Included in the latter amount were C&I loan commitments of \$706.1 million, including commitments to originate \$277.0 million of specialty finance loans and leases.

In addition to loan commitments, we had commitments to issue financial stand-by, performance stand-by, and commercial letters of credit totaling \$182.2 million at June 30, 2014, as compared to \$213.7 million at December 31, 2013.

Financial stand-by letters of credit primarily are issued for the benefit of other financial institutions or municipalities on behalf of certain of our current borrowers, and obligate us to guarantee payment of a specified financial obligation.

Performance stand-by letters of credit are primarily issued for the benefit of local municipalities on behalf of certain of our borrowers. These borrowers are mainly developers of residential subdivisions with whom we currently have a lending relationship. Performance stand-by letters of credit obligate us to make payments in the event that a specified third party fails to perform under non-financial contractual obligations.

Commercial letters of credit act as a means of ensuring payment to a seller upon shipment of goods to a buyer. Although commercial letters of credit are used to effect payment for domestic transactions, the majority are used to settle payments in international trade. Typically, such letters of credit require the presentation of documents that describe the commercial transaction, and provide evidence of shipment and the transfer of title.

The fees we collect in connection with the issuance of letters of credit are included in **Fee income** in the Consolidated Statements of Income and Comprehensive Income.

Asset Quality

Non-Covered Loans Held for Investment and Non-Covered Other Real Estate Owned

The quality of our assets was enhanced in the second quarter by reductions in the balances of non-performing non-covered loans and assets, as well as in the balance of loans 30 to 89 days past due. We also recorded net recoveries, rather than net charge-offs, in the three months ended June 30, 2014.

To begin, the balance of non-performing non-covered assets declined \$38.2 million from the end of March and \$29.1 million from the end of December to \$145.8 million at June 30, 2014. Non-performing non-covered assets thus represented 0.32% of total non-covered assets at the end of the second quarter, an improvement from 0.41% and 0.40%, respectively, at the earlier period-ends.

While OREO declined \$3.5 million and \$4.2 million in the three and six months ended June 30, 2014, respectively, the decline in non-performing non-covered assets was primarily due to a reduction in the balance of non-performing non-covered loans. Non-performing non-covered loans fell \$34.8 million and \$24.9 million, respectively, over the three and six months ended June 30, 2014, to \$78.6 million at that date. The ratio of non-performing non-covered loans to total non-covered loans thus improved to 0.25% at the end of the second quarter from 0.37% and 0.35%, respectively, at the earlier period-ends.

The declines in non-performing assets and loans were primarily due to a group of non-performing multi-family loans to a single borrower, in the amount of \$32.2 million, that transitioned to OREO and were subsequently sold in the second quarter of this year.

Table of Contents

The following table sets forth the changes in non-performing loans over the six months ended June 30, 2014:

(in thousands)	
Balance at December 31, 2013	\$103,537
New non-accrual	39,367
Charge-offs	(1,969)
Transferred to other real estate owned	(36,227)
Loan payoffs, including dispositions and principal pay-downs	(23,159)
Restored to performing status	(2,935)
Balance at June 30, 2014	\$78,614

In addition, the balance of loans 30 to 89 days past due declined significantly, to \$4.0 million, from \$18.6 million at the end of the trailing quarter and from \$37.1 million at December 31st. As a result, total delinquencies amounted to \$149.8 million at the end of the second quarter, reflecting three- and six-month improvements of \$52.8 million and \$62.2 million, or 26.1% and 29.3%, respectively.

The three-month decline in loans 30 to 89 days past due was largely attributable to an \$11.0 million reduction in CRE loans to \$878,000, while the six-month decline was primarily attributable to a \$32.6 million reduction in multi-family loans to \$1.1 million. The latter decline reflected the disposition of two multi-family loans totaling \$30.9 million in the first quarter of this year. One-to-four family loans 30 to 89 days past due accounted for \$1.6 million of the second quarter-end balance, while other loans accounted for the remaining modest amount. Notably, there were no ADC loans 30 to 89 days past due at June 30, 2014, March 31, 2014, or December 31, 2013.

A loan generally is classified as a non-accrual loan when it is 90 days or more past due. When a loan is placed on non-accrual status, we cease the accrual of interest owed, and previously accrued interest is reversed and charged against interest income. At June 30, 2014 and December 31, 2013, all of our non-performing loans were non-accrual loans. A loan is generally returned to accrual status when the loan is current and we have reasonable assurance that the loan will be fully collectible.

We monitor non-accrual loans both within and beyond our primary lending area in the same manner. Monitoring loans generally involves inspecting and re-appraising the collateral properties; holding discussions with the principals and managing agents of the borrowing entities and/or retained legal counsel, as applicable; requesting financial, operating, and rent roll information; confirming that hazard insurance is in place or force-placing such insurance; monitoring tax payment status and advancing funds as needed; and appointing a receiver, whenever possible, to collect rents, manage the operations, provide information, and maintain the collateral properties.

It is our policy to order updated appraisals for all non-performing loans, irrespective of loan type, that are collateralized by multi-family buildings, CRE properties, or land, in the event that such a loan is 90 days or more past due, and if the most recent appraisal on file for the property is more than one year old. Appraisals are ordered annually until such time as the loan becomes performing and is returned to accrual status. It is not our policy to obtain updated appraisals for performing loans. However, appraisals may be ordered for performing loans when a borrower requests an increase in the loan amount, a modification in loan terms, or an extension of a maturing loan. We do not analyze current LTVs on a portfolio-wide basis.

Non-performing loans are reviewed regularly by management and reported on a monthly basis to the Mortgage Committee, the Credit Committee, and the Boards of Directors of the Banks. In accordance with our charge-off policy, non-performing loans are written down to their current appraised values, less certain transaction costs. Workout specialists from our Loan Workout Unit actively pursue borrowers who are delinquent in repaying their loans in an effort to collect payment. In addition, outside counsel with experience in foreclosure proceedings are retained to institute such action with regard to such borrowers.

Properties that are acquired through foreclosure are classified as OREO, and are recorded at the lower of the unpaid principal balance or fair value at the date of acquisition, less the estimated cost of selling the property. It is our policy to require an appraisal and environmental assessment of properties classified as OREO before foreclosure, and to re-appraise the properties on an as-needed basis, and not less than annually, until they are sold. We dispose of such properties as quickly and prudently as possible, given current market conditions and the property's condition.

To mitigate the potential for credit losses, we underwrite our loans in accordance with credit standards that we consider to be prudent. In the case of multi-family and CRE loans, we look first at the consistency of the cash flows being generated by the property to determine its economic value, and then at the market value of the property that collateralizes the loan. The amount of the loan is then based on the lower of the two values, with the economic value more typically used.

Table of Contents

The condition of the collateral property is another critical factor. Multi-family buildings and CRE properties are inspected from rooftop to basement as a prerequisite to approval, with a member of the Mortgage or Credit Committee participating in inspections on multi-family loans to be originated in excess of \$7.5 million, and a member of the Mortgage or Credit Committee participating in inspections on CRE loans to be originated in excess of \$4.0 million. Furthermore, independent appraisers, whose appraisals are carefully reviewed by our experienced in-house appraisal officers and staff, perform appraisals on collateral properties. In many cases, a second independent appraisal review is performed.

In addition, we work with a select group of mortgage brokers who are familiar with our credit standards and whose track record with our lending officers is typically greater than ten years. Furthermore, in New York City, where the majority of the buildings securing our multi-family loans are located, the rents that tenants may be charged on certain apartments are typically restricted under certain rent-control or rent-stabilization laws. As a result, the rents that tenants pay for such apartments are generally lower than current market rents. Buildings with a preponderance of such rent-regulated apartments are less likely to experience vacancies in times of economic adversity.

To further manage our credit risk, our lending policies limit the amount of credit granted to any one borrower, and typically require minimum DSCRs of 120% for multi-family loans and 130% for CRE loans. Although we typically will lend up to 75% of the appraised value on multi-family buildings and up to 65% on commercial properties, the average LTVs of such credits at origination were below those amounts at June 30, 2014. Exceptions to these LTV limitations are reviewed on a case-by-case basis.

The repayment of loans secured by commercial real estate is often dependent on the successful operation and management of the underlying properties. To minimize our credit risk, we originate CRE loans in adherence with conservative underwriting standards, and require that such loans qualify on the basis of the property's current income stream and DSCR. The approval of a loan also depends on the borrower's credit history, profitability, and expertise in property management.

Although the reasons for a loan to default will vary from credit to credit, our multi-family and CRE loans, in particular, typically have not resulted in significant losses. Such loans are generally originated at conservative LTVs and DSCRs, as previously stated. Furthermore, in the case of multi-family loans, the cash flows generated by the properties are generally below-market and have significant value.

With regard to ADC loans, we typically lend up to 75% of the estimated as-completed market value of multi-family and residential tract projects; however, in the case of home construction loans to individuals, the limit is 80%. With respect to commercial construction loans, we typically lend up to 65% of the estimated as-completed market value of the property. Credit risk is also managed through the loan disbursement process. Loan proceeds are disbursed periodically in increments as construction progresses, and as warranted by inspection reports provided to us by our own lending officers and/or consulting engineers.

Furthermore, our loan portfolio has been structured to manage our exposure to both credit and interest rate risk. The vast majority of the loans in our portfolio are intermediate-term credits, with multi-family and CRE loans typically repaying or refinancing within three to four years of origination. In addition, our multi-family loans are largely secured by buildings with rent-regulated apartments that tend to maintain a high level of occupancy, regardless of economic conditions in our marketplace.

Our specialty finance subsidiary participates in asset-based loans, dealer floor-plan loans, and equipment loans and leases that are generally syndicated, and are generated by our experienced officers, who have cultivated long-term relationships with a select group of nationally recognized financial institutions. The majority of the loans and leases

we produce are made to large corporate obligors, the majority of which are publicly traded, carry investment grade or near-investment grade ratings, and participate in stable industries nationwide.

In a credit downturn, the ability of these borrowers to generate cash flows may be diminished, and their ability to repay their loans may deteriorate. Accordingly, we maintain either a perfected first security interest or outright ownership of the collateral; in addition, our loans and leases are generally structured as senior debt. To further minimize the risk involved in specialty finance lending and leasing, we re-underwrite each transaction; in addition, we retain outside counsel to conduct a further review of the underlying documentation.

Other C&I loans are typically underwritten on the basis of the cash flows produced by the borrower's business, and are generally collateralized by various business assets, including, but not limited to, inventory, equipment, and accounts receivable. As a result, the capacity of the borrower to repay is substantially dependent on the degree to which the business is successful. Furthermore, the collateral underlying an other C&I loan may depreciate over time, may not be conducive to appraisal, and may fluctuate in value, based upon the operating results of the business. Accordingly, personal guarantees are also a normal requirement for other C&I loans.

Table of Contents

The procedures we follow with respect to delinquent loans are generally consistent across all categories, with late charges assessed, and notices mailed to the borrower at specified dates. We attempt to reach the borrower by telephone to ascertain the reasons for delinquency and the prospects for repayment. When contact is made with a borrower at any time prior to foreclosure or recovery against collateral property, we attempt to obtain full payment, and will consider a repayment schedule to avoid taking such action. Delinquencies are addressed by our Loan Workout Unit and a reasonable effort is made to collect rather than initiate foreclosure proceedings.

Fair values for all multi-family buildings, CRE properties, and land are determined based on the appraised value. If an appraisal is more than one year old and the loan is classified as either non-performing or as an accruing troubled debt restructuring (TDR), then an updated appraisal is required to determine fair value. Estimated disposition costs are deducted from the fair value of the property to determine estimated net realizable value. In the instance of an outdated appraisal on an impaired loan, we adjust the original appraisal by using a third-party index value to determine the extent of impairment until an updated appraisal is received.

While we strive to originate loans that will perform fully, adverse economic and market conditions, among other factors, can adversely impact a borrower's ability to repay. Reflecting the improving economy, the nature of our primary lending niche, and our conservative underwriting standards, we recorded net recoveries of \$112,000 in the current second quarter, and net charge-offs of \$2.6 million and \$4.7 million, respectively, in the trailing and year-earlier three months. As a result, net recoveries represented (0.00)% of average loans in the current second quarter, while net charge-offs represented 0.01% of average loans in each of the earlier periods.

Other loans, multi-family loans, and, to a much lesser extent, ADC loans were responsible for the net recoveries we recorded in the current second quarter, and amounted to \$916,000, \$557,000, and \$3,000, respectively. These amounts were largely tempered by net charge-offs of \$1.3 million and \$113,000, respectively, on CRE and one-to-four family loans.

In the six months ended June 30, 2014, we recorded net charge-offs of \$2.5 million, in contrast to \$10.3 million in the year-earlier six months. Most of the improvement occurred in the portfolios of multi-family, ADC, and other loans.

Reflecting the modest level of net charge-offs recorded in the first six months of this year, and the absence of any provisions, the allowance for losses on non-covered loans declined \$2.5 million from the December 31st balance to \$139.5 million, representing 0.44% of total non-covered loans and 177.41% of non-performing non-covered loans, at the end of June. Based upon all relevant and available information as of June 30, 2014, management believes that the allowance for losses on non-covered loans was appropriate at that date.

Historically, our level of charge-offs has been relatively low in adverse credit cycles, even when the volume of non-performing loans has increased. This distinction has largely been due to the nature of our primary lending niche (multi-family loans collateralized by non-luxury apartment buildings in New York City that are rent-regulated and feature below-market rents), and to our conservative underwriting practices that require, among other things, low LTVs.

Reflecting the strength of the underlying collateral for these loans and the collateral structure, a relatively small percentage of our non-performing multi-family loans have resulted in losses over time. Low LTVs provide a greater likelihood of full recovery and reduce the possibility of incurring a severe loss on a credit. Furthermore, in many cases, low LTVs result in our having fewer loans with a potential for the borrower to walk away from the property. Although borrowers may default on loan payments, they have a greater incentive to protect their equity in the collateral property and to return their loans to performing status.

Given that our CRE loans are underwritten in accordance with underwriting standards that are similar to those that apply to our multi-family credits, an increase in non-performing CRE loans historically has not resulted in a corresponding increase in losses on such loans.

In addition, at June 30, 2014, one-to-four family loans, ADC loans, and other loans represented 2.2%, 1.1%, and 3.1%, respectively, of total non-covered loans held for investment, and 2.0%, 1.2%, and 2.9% at December 31, 2013. Furthermore, 1.3%, 0.68%, and 0.64% of one-to-four family loans, ADC loans, and other loans, respectively, were non-performing loans at June 30, 2014.

Table of Contents

The following tables present the number and amount of non-performing CRE and multi-family loans by originating bank at June 30, 2014 and December 31, 2013:

As of June 30, 2014	Non-Performing Multi-Family Loans		Non-Performing Commercial Real Estate Loans	
	Number	Amount	Number	Amount
(dollars in thousands)				
New York Community Bank	17	\$33,368	25	\$20,088
New York Commercial Bank	1	300	3	6,966
Total for New York Community Bancorp	18	\$33,668	28	\$27,054

As of December 31, 2013	Non-Performing Multi-Family Loans		Non-Performing Commercial Real Estate Loans	
	Number	Amount	Number	Amount
(dollars in thousands)				
New York Community Bank	21	\$58,093	23	\$15,898
New York Commercial Bank	1	302	5	8,652
Total for New York Community Bancorp	22	\$58,395	28	\$24,550

The following table presents information about our five largest non-performing loans at June 30, 2014, all of which are non-covered held-for-investment loans:

	Loan No. 1	Loan No. 2	Loan No. 3	Loan No. 4	Loan No. 5
Type of Loan	Multi-Family	Multi-Family	CRE	Multi-Family	CRE
Origination Date	1/5/2006	5/23/2011 ⁽¹⁾	12/1/2010 ⁽²⁾	6/14/2007	9/12/2005
Origination Balance	\$12,640,000	\$50,708,107	\$6,121,180	\$4,320,000	\$4,300,000
Full Commitment Balance	\$12,640,000	\$50,708,107	\$6,121,180	\$4,320,000	\$4,300,000
Balance at June 30, 2014	\$10,593,021	\$9,280,711	\$6,067,952	\$3,933,041	\$2,860,688
Associated Allowance	None	None	None	None	None
Non-Accrual Date	March 2014	May 2013	December 2010	December 2012	September 2013
Origination LTV	79%	85%	78%	80%	73%
Current LTV	93%	66%	67%	86%	55%
Last Appraisal	March 2014	January 2014	September 2013	October 2013	November 2013

(1) Loan No. 2 consists of various loans with origination dates extending as far back as 2006 that were restructured into a non-accrual TDR on May 23, 2011.

(2) Loan No. 3 includes three loans: one with an origination date of September 20, 2000 and two with an origination date of September 10, 2003. These loans were restructured into a non-accrual TDR on December 1, 2010.

The following is a description of the five loans identified in the preceding table. It should be noted that no allocation for the non-covered loan loss allowance was needed for any of these loans, as determined by using the fair value of collateral method defined in ASC 310-10 and -40 for each.

No. 1 - The borrower is an owner of real estate and is based in New Jersey. The loan is collateralized by a multi-family complex containing 314 residential units and four retail stores in Atlantic City, New Jersey.

No. 2 - The borrower is an owner of real estate and is based in Connecticut. In the second quarter of 2014, the Company completed foreclosures on 30 of the 32 collateral properties, thereby reducing the balance at June 30, 2014 to the level reflected in the table. This loan is collateralized by two multi-family complexes with 217 residential units in Hartford, Connecticut.

No. 3 - The borrower is an owner of real estate and is based in New York. This loan is collateralized by a 114,000-square foot commercial building in Plainview, New York.

No. 4 - The borrower is an owner of real estate and is based in Connecticut. This loan is collateralized by a multi-family building containing 71 residential units in New Haven, Connecticut.

No. 5 - The borrower is an owner of real estate and is based in New Jersey. This loan is collateralized by a 33,040-square foot medical/professional office building in Raritan, New Jersey.

Table of Contents*Troubled Debt Restructurings*

In an effort to proactively manage delinquent loans, we have selectively extended to certain borrowers such concessions as rate reductions and extension of maturity dates, as well as forbearance agreements, when such borrowers have exhibited financial difficulty. In accordance with GAAP, we are required to account for such loan modifications or restructurings as TDRs.

The eligibility of a borrower for work-out concessions of any nature depends upon the facts and circumstances of each transaction, which may change from period to period, and involve management's judgment regarding the likelihood that the concession will result in the maximum recovery for the Company.

Loans modified as TDRs are placed on non-accrual status until we determine that future collection of principal and interest is reasonably assured, which generally requires that the borrower demonstrate performance according to the restructured terms for at least six consecutive months.

At June 30, 2014, loans modified as TDRs totaled \$49.6 million, including accruing loans of \$13.1 million and non-accrual loans of \$36.5 million. Loans on which concessions were made with respect to rate reductions and/or extension of maturity dates totaled \$43.6 million; loans in connection with which forbearance agreements were reached totaled \$6.0 million. At December 31, 2013, the balance of loans modified as TDRs was \$80.3 million, including accruing loans and non-accrual loans of \$13.4 million and \$66.9 million, respectively.

Based on the number of loans performing in accordance with their revised terms, our success rate for both restructured multi-family and CRE loans was 92% at the end of the second quarter; in addition, our success rate was 100% for all other loan types at quarter-end.

Analysis of Troubled Debt Restructurings

The following table presents information regarding our TDRs as of June 30, 2014:

(in thousands)	Accruing	Non-Accrual	Total
Multi-family	\$10,001	\$18,093	\$28,094
Commercial real estate	2,156	16,295	18,451
One-to-four family	--	--	--
Acquisition, development, and construction	--	935	935
Commercial and industrial	956	1,210	2,166
Total	\$13,113	\$36,533	\$49,646

The following table presents information regarding our TDRs as of December 31, 2013:

(in thousands)	Accruing	Non-Accrual	Total
Multi-family	\$10,083	\$50,548	\$60,631
Commercial real estate	2,198	15,626	17,824
One-to-four family	--	--	--

Acquisition, development, and construction	--	--	--
Commercial and industrial	1,129	758	1,887
Total	\$13,410	\$66,932	\$80,342

The following table sets forth the changes in TDRs over the six months ended June 30, 2014:

(in thousands)	Accruing	Non-Accrual	Total
Balance at December 31, 2013	\$13,410	\$66,932	\$80,342
New TDRs	--	4,347	4,347
Charge-offs	--	(334)	(334)
Transferred from accruing to non-accrual	--	--	--
Transferred to other real estate owned	--	(32,194)	(32,194)
Loan payoffs, including dispositions and principal pay-downs	(297)	(2,218)	(2,515)
Balance at June 30, 2014	\$13,113	\$36,533	\$49,646

Table of Contents

On a limited basis, we may provide additional credit to a borrower after a loan has been placed on non-accrual status or modified as a TDR if, in management's judgment, the value of the property after the additional loan funding is greater than the initial value of the property plus the additional loan funding amount. During the six months ended June 30, 2014, no such additions were made. Furthermore, the terms of our restructured loans typically would not restrict us from cancelling outstanding commitments for other credit facilities to a borrower in the event of non-payment of a restructured loan.

Except for the non-accrual loans and TDRs disclosed in this filing, we did not have any potential problem loans at June 30, 2014 that would have caused management to have serious doubts as to the ability of a borrower to comply with present loan repayment terms and that would have resulted in such disclosure if that were the case.

Table of Contents**Asset Quality Analysis (Excluding Covered Loans, Covered OREO, and Non-Covered Loans Held for Sale)**

The following table presents information regarding our consolidated allowance for losses on non-covered loans, our non-performing non-covered assets, and our non-covered loans 30 to 89 days past due at June 30, 2014 and December 31, 2013. Covered loans are considered to be performing due to the application of the yield accretion method, as discussed elsewhere in this report. Therefore, covered loans are not reflected in the amounts or ratios provided in this table.

(dollars in thousands)	At or For the Six Months Ended June 30, 2014	At or For the Twelve Months Ended December 31, 2013
Allowance for Losses on Non-Covered Loans:		
Balance at beginning of period	\$141,946	\$140,948
Provision for losses on non-covered loans	--	18,000
Charge-offs:

Balance at end of period	\$139,473	\$141,946
Non-Performing Non-Covered Assets:		
Non-accrual non-covered mortgage loans:		
Multi-family	\$ 33,668	\$ 58,395
Commercial real estate	27,054	24,550
One-to-four family	9,189	10,937
Acquisition, development, and construction	2,328	2,571
Total non-accrual non-covered mortgage loans	72,239	96,453
Other non-accrual non-covered loans	6,375	7,084
Total non-performing non-covered loans ⁽¹⁾	\$ 78,614	\$103,537
Non-covered other real estate owned ⁽²⁾	67,186	71,392
Total non-performing non-covered assets	\$145,800	\$174,929

Asset Quality Measures:

Non-performing non-covered loans to total non-covered loans	0.25%	0.35%
Non-performing non-covered assets to total non-covered assets	0.32	0.40
Allowance for losses on non-covered loans to non-performing non-covered loans	177.41	135.10
Allowance for losses on non-covered loans to total non-covered loans	0.44	0.48
Net charge-offs during the period to average loans outstanding during the period ⁽³⁾	0.01 ⁽⁴⁾	0.05
Loans 30-89 Days Past Due:		
Multi-family	\$1,082	\$33,678
Commercial real estate	878	1,854
One-to-four family	1,641	1,076
Acquisition, development, and construction	--	--
Other loans	425	481
Total loans 30-89 days past due ⁽⁵⁾	\$4,026	\$37,089

(1) The June 30, 2014 and December 31, 2013 amounts exclude loans 90 days or more past due of \$174.0 million and \$211.5 million, respectively, that are covered by FDIC loss sharing agreements.

(2) The June 30, 2014 and December 31, 2013 amounts exclude OREO of \$35.4 million and \$37.5 million, respectively, that is covered by FDIC loss sharing agreements.

(3) Average loans include covered loans.

(4) Presented on a non-annualized basis.

(5) The June 30, 2014 and December 31, 2013 amounts exclude loans 30 to 89 days past due of \$48.8 million and \$57.9 million, respectively, that are covered by FDIC loss sharing agreements.

Table of Contents**Covered Loans and Covered Other Real Estate Owned**

The credit risk associated with the assets acquired in our AmTrust and Desert Hills transactions has been substantially mitigated by our loss sharing agreements with the FDIC. Under the terms of the loss sharing agreements, the FDIC agreed to reimburse us for 80% of losses (and share in 80% of any recoveries) up to a specified threshold with respect to the loans and OREO acquired in the transactions, and to reimburse us for 95% of any losses (and share in 95% of any recoveries) with respect to the acquired assets beyond that threshold. The loss sharing (and reimbursement) agreements applicable to one-to-four family mortgage loans and HELOCs are effective for a ten-year period from the date of acquisition. Under the loss sharing agreements applicable to all other covered loans and OREO, the FDIC will reimburse us for losses for a five-year period from the date of acquisition; the period for sharing in recoveries on all other covered loans and OREO extends for a period of eight years from the acquisition date.

We consider our covered loans to be performing due to the application of the yield accretion method under ASC 310-30, which allows us to aggregate credit-impaired loans acquired in the same fiscal quarter into one or more pools, provided that the loans have common risk characteristics. A pool is then accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows. Accordingly, loans that may have been classified as non-performing loans by AmTrust or Desert Hills were no longer classified as non-performing at the respective dates of acquisition because we believed at that time that we would fully collect the new carrying value of those loans. The new carrying value represents the contractual balance, reduced by the portion expected to be uncollectible (referred to as the non-accretable difference) and by an accretable yield (discount) that is recognized as interest income. It is important to note that management's judgment is required in reclassifying loans subject to ASC 310-30 as performing loans, and is dependent on having a reasonable expectation about the timing and amount of the cash flows to be collected, even if a loan is contractually past due.

In connection with the AmTrust and Desert Hills loss sharing agreements, we established FDIC loss share receivables of \$740.0 million and \$69.6 million, which were the acquisition date fair values of the respective loss sharing agreements (i.e., the expected reimbursements from the FDIC over the terms of the agreements). The loss share receivables may increase if the losses increase, and may decrease if the losses fall short of the expected amounts. Increases in estimated reimbursements will be recognized in income in the same period that they are identified and that the allowance for losses on the related covered loans is recognized.

In the six months ended June 30, 2014, we recorded FDIC indemnification expense of \$11.6 million in Non-interest income in connection with the recovery of \$14.4 million from the allowance for losses on covered loans. The recovery was recorded to reflect our expectation that the cash flows generated by certain pools of covered loans would increase due to an improvement in credit quality. Conversely, in the six months ended June 30, 2013, we recorded FDIC indemnification income of \$7.3 million in Non-interest income in connection with a \$9.1 million provision for losses on covered loans. The provision was recorded to reflect our expectation that the cash flows generated by certain pools of covered loans would decline due to a decrease in credit quality.

Decreases in estimated reimbursements from the FDIC, if any, will be recognized in income prospectively over the life of the related covered loans (or, if shorter, over the remaining term of the loss sharing agreement). Related additions to the accretable yield on the covered loans will be recognized in income prospectively over the lives of the loans. Gains and recoveries on covered assets will offset losses, or be paid to the FDIC at the applicable loss share percentage at the time of recovery.

The loss share receivables also may increase due to accretion, or decrease due to amortization. In the six months ended June 30, 2014, we recorded net amortization of \$17.6 million; in the year-earlier six-month period, we recorded net amortization of \$7.7 million. Accretion of the FDIC loss share receivable relates to the difference between the

discounted, versus the undiscounted, expected cash flows of covered loans subject to the FDIC loss sharing agreements. Amortization occurs when the expected cash flows from the covered loan portfolio improve, thus reducing the amounts receivable from the FDIC. These cash flows were discounted to reflect the uncertainty of the timing and receipt of the loss sharing reimbursements from the FDIC. In the six months ended June 30, 2014, we received FDIC reimbursements of \$22.5 million, as compared to \$34.3 million in the six months ended June 30, 2013.

Table of Contents**Asset Quality Analysis (Including Covered Loans and Covered OREO)**

The following table presents information regarding our non-performing assets and loans 30 to 89 past due at June 30, 2014 and December 31, 2013, including covered loans and covered OREO (collectively, covered assets):

(dollars in thousands)	At or For the Six Months Ended June 30, 2014	At or For the Twelve Months Ended December 31, 2013
Covered Loans 90 Days or More Past Due:		
Multi-family	\$ --	\$ --

Total non-performing loans	\$ 78,614	\$ 173,992	\$ 252,606

Securities

At June 30, 2014, securities represented \$7.8 billion, or 16.0%, of total assets, as compared to \$8.0 billion, or 17.0%, at December 31, 2013.

The investment policies of the Company and the Banks are established by the respective Boards of Directors and implemented by their respective Investment Committees, in concert with the respective Asset and Liability Management Committees. The Investment Committees generally meet quarterly or on an as-needed basis to review the portfolios and specific capital market transactions. In addition, the securities portfolios are reviewed monthly by the Boards of Directors as a whole. Furthermore, the policies guiding the Company's and the Banks' investments are reviewed at least annually by the respective Investment Committees, as well as by the respective Boards. While the policies permit investment in various types of liquid assets, neither the Company nor the Banks currently maintains a trading portfolio.

Our general investment strategy is to purchase liquid investments with various maturities to ensure that our overall interest rate risk position stays within the required limits of our investment policies. We generally limit our investments to GSE obligations (defined as GSE certificates; GSE collateralized mortgage obligations, or CMOs; and GSE debentures). At June 30, 2014 and December 31, 2013, GSE obligations represented 95.8% and 95.5%, respectively, of total securities. The remainder of the portfolio at those dates was comprised of corporate bonds, trust preferred securities, corporate equities, municipal obligations, and a private label CMO. None of our securities investments are backed by subprime or Alt-A loans.

Depending on management's intent at the time of purchase, securities are classified as either held to maturity or available for sale. Held-to-maturity securities are securities that management has the positive intent to hold to maturity, whereas available-for-sale securities are securities that management intends to hold for an indefinite period of time. Held-to-maturity securities generate cash flows from repayments and serve as a source of earnings; they also serve as collateral for our wholesale borrowings. Available-for-sale securities generate cash flows from sales, as well

as from repayments of principal and interest. They also serve as a source of liquidity for future loan production, the reduction of higher-cost funding, and general operating activities. A decision to purchase or sell such securities is based on economic conditions, including changes in interest rates, liquidity, and our asset and liability management strategy.

Held-to-maturity securities represented \$7.5 billion, or 96.9%, of total securities at the end of the second quarter, as compared to \$7.7 billion, or 96.5%, at the end of last year. At June 30, 2014, the fair value of securities held to maturity represented 101.0% of their carrying value, as compared to 97.1% at December 31, 2013. Mortgage-related securities accounted for \$4.3 billion and \$4.4 billion, respectively, of securities held to maturity at June 30, 2014 and December 31, 2013, while other securities accounted for \$3.2 billion and \$3.3 billion at the corresponding dates. Included in the respective balances were GSE obligations of \$7.4 billion and \$7.5 billion; capital trust notes of \$75.5 million and \$75.7 million; and corporate bonds of \$73.1 million and \$72.9 million, respectively. The estimated weighted average life of the held-to-maturity securities portfolio was 7.6 years and 8.2 years at the respective period-ends.

At June 30, 2014, available-for-sale securities represented \$245.0 million, or 3.1%, of total securities, down from \$280.7 million, or 3.5%, at December 31, 2013. Included in the respective period-end amounts were mortgage-related securities of \$90.5 million and \$96.2 million, and other securities of \$154.5 million and \$184.5 million. The estimated weighted average life of the available-for-sale securities portfolio was 7.5 years at the close of the second quarter, as compared to 7.3 years at December 31st.

Table of Contents

Federal Home Loan Bank Stock

The Community Bank and the Commercial Bank are members of the FHLB-NY, one of 12 regional banks that comprise the FHLB system. While each regional FHLB manages its customer relationships, the 12 FHLBs use their combined size and strength to obtain their funding at the lowest possible cost.

As members of the FHLB-NY, the Community Bank and the Commercial Bank are required to acquire and hold shares of its capital stock. In addition, the Community Bank acquired shares of the capital stock of the FHLB-Cincinnati and the FHLB-San Francisco in connection with the AmTrust and Desert Hills acquisitions, respectively.

At June 30, 2014, the Community Bank held \$552.7 million of FHLB stock, including \$529.0 million of stock in the FHLB-NY, \$23.1 million of stock in the FHLB-Cincinnati, and \$658,000 of stock in the FHLB-San Francisco. The Commercial Bank had \$19.0 million of FHLB stock at the end of the second quarter, all of which was with the FHLB-NY. All FHLB stock continued to be valued at par, with no impairment required at June 30, 2014.

In the six months ended June 30, 2014 and 2013, dividends from the FHLB to the Community Bank totaled \$11.8 million and \$8.8 million, respectively. Dividends from the FHLB-NY to the Commercial Bank were \$264,000 and \$176,000, respectively, in the corresponding periods.

Bank-Owned Life Insurance

Bank-owned life insurance (BOLI) is recorded at the total cash surrender value of the policies in the Consolidated Statements of Condition under Other assets and the income generated by the increase in the cash surrender value of the policies is recorded in Non-interest income in the Consolidated Statements of Income and Comprehensive Income.

At June 30, 2014 our investment in BOLI amounted to \$906.5 million, as compared to \$893.5 million at December 31, 2013. The increase reflects the rise in the cash surrender value of the underlying policies over the six-month period.

FDIC Loss Share Receivable

In connection with our loss sharing agreements with the FDIC with respect to the loans and OREO acquired in the AmTrust and Desert Hills transactions, our FDIC loss share receivables were \$441.0 million and \$492.7 million, respectively, at June 30, 2014 and December 31, 2013. The loss share receivables represent the present values of the reimbursements we expected to receive under the combined loss sharing agreements at the respective dates.

Goodwill and Core Deposit Intangibles

We record goodwill and CDI in our Consolidated Statements of Condition in connection with our various business combinations.

Goodwill totaled \$2.4 billion at June 30, 2014, consistent with the balance at December 31, 2013. Reflecting amortization, CDI declined \$4.4 million from the year-end balance to \$11.8 million at the end of June.

Sources of Funds

The Parent Company (i.e., the Company on an unconsolidated basis) has four primary funding sources for the payment of dividends, share repurchases, and other corporate uses: dividends paid to the Company by the Banks; capital raised through the issuance of stock and other securities; funding raised through the issuance of debt instruments; and repayments of, and income from, investment securities.

On a consolidated basis, our funding primarily stems from a combination of the following sources: the deposits we gather through our branch network or acquire in business combinations; brokered deposits; borrowed funds, primarily in the form of wholesale borrowings; the cash flows generated through the repayment and sale of loans; and the cash flows generated through the repayment and sale of securities.

Loan repayments and sales totaled \$5.1 billion in the first six months of 2014, as compared to \$9.0 billion in the year-earlier six-month period. The bulk of the decline was due to a decrease in the production of one-to-four family loans for sale by our mortgage banking operation as loan demand weakened in connection with the year-over-year rise in residential mortgage interest rates.

Table of Contents

In the six months ended June 30, 2014, cash flows from the repayment and sale of securities respectively totaled \$284.1 million and \$137.3 million, while purchases of securities totaled \$249.3 million. In the first six months of 2013, cash flows from the repayment and sale of securities totaled \$557.2 million and \$605.3 million, respectively, and were partially offset by purchases of securities totaling \$2.2 billion. In the first six months of 2014, the cash flows from loans and securities were primarily redeployed into the production of held-for-investment multi-family loans.

Deposits

Our ability to retain and attract deposits depends on several factors, including customer satisfaction, the rates of interest we pay, the types of products we offer, and the attractiveness of their terms. There are times we may choose not to compete aggressively for deposits, depending on our access to deposits through acquisitions, the availability of lower-cost funding sources, the competitiveness of the market and its impact on pricing, and our need for such deposits to fund our loan demand. Conversely, there are times we may choose to compete more aggressively for deposits to diversify our funding sources.

In the first six months of 2014, we engaged in a campaign to increase our deposits, which resulted in a significant level of deposit growth. Deposits rose \$1.7 billion, or 6.6%, to \$27.4 billion, representing 56.3% of total assets at the end of June; the comparable measure was 55.0% at December 31, 2013. Retail deposits accounted for \$607.4 million of the six-month increase, while municipal and business institutional deposits accounted for \$120.7 million and \$1.3 billion, respectively, of the deposit growth we achieved. These increases were partially offset by a \$338.2 million decline in brokered deposits, as more fully discussed below.

While certificates of deposit (CDs) fell \$212.9 million to \$6.7 billion at the end of the second quarter, the decrease was far exceeded by an increase in the balances of NOW and money market accounts, savings accounts, and non-interest-bearing accounts. Specifically, NOW and money market accounts rose \$1.3 billion in the first six months of this year, to \$11.9 billion, while savings accounts and non-interest-bearing accounts rose \$477.6 million and \$84.3 million, to \$6.4 billion and \$2.4 billion, respectively.

Included in our deposit mix at June 30, 2014 were total brokered deposits of \$3.7 billion, reflecting the aforementioned six-month decline. The extent to which we accept brokered deposits depends on various factors, including the availability and pricing of such wholesale funding sources, and the availability and pricing of other sources of funds. Brokered money market accounts represented \$3.5 billion of total money market accounts at June 30, 2014, a \$160.3 million decrease from the year-end balance, while brokered CDs fell \$208.6 million to \$3.5 million over the same time. Brokered demand accounts represented \$291.2 million of brokered deposits at the end of the second quarter, reflecting a \$30.7 million increase from the balance at year-end.

Borrowed Funds

Borrowed funds consist primarily of wholesale borrowings (i.e., FHLB advances, repurchase agreements, and fed funds purchased) and, to a far lesser extent, other borrowings (i.e., junior subordinated debentures and preferred stock of subsidiaries). At June 30, 2014, borrowed funds totaled \$15.3 billion, up \$196.7 million from the balance at December 31st.

Wholesale Borrowings

Wholesale borrowings accounted for \$14.9 billion of borrowed funds at the end of the second quarter, exceeding the year-end balance by \$196.6 million. The June 30th balance represented 30.7% of total assets, while the December 31st balance represented 31.6%. FHLB advances and repurchase agreements accounted for \$11.1 billion and \$3.4 billion,

respectively, of the June 30th total, as FHLB advances rose \$216.6 million and repurchase agreements were consistent with the balance at December 31st.

Both the Community Bank and the Commercial Bank are members of, and have lines of credit with, the FHLB-NY. Pursuant to blanket collateral agreements with the Banks, our FHLB advances and overnight advances are secured by pledges of certain eligible collateral in the form of loans. In addition to \$10.5 billion of FHLB-NY advances, the June 30th balance includes \$592.1 million of FHLB-Cincinnati advances that were acquired in the AmTrust acquisition in December 2009.

Repurchase agreements are contracts for the sale of securities owned or borrowed by the Banks with an agreement to repurchase those securities at agreed-upon prices and dates. Our repurchase agreements are primarily collateralized by GSE obligations, and may be entered into with the FHLB-NY or certain brokerage firms. The brokerage firms we utilize are subject to an ongoing internal financial review to ensure that we borrow funds only from those dealers whose financial strength will minimize the risk of loss due to default. In addition, a master repurchase agreement must be executed and on file for each of the brokerage firms we use.

Table of Contents

At June 30, 2014, \$4.0 billion of our wholesale borrowings were callable in the next 12 months. Given the current interest rate environment, we do not expect our callable wholesale borrowings to be called.

Other Borrowings

At June 30, 2014, other borrowings totaled \$362.5 million, comparable to the balance at December 31st. Included in the June 30th amount were junior subordinated debentures of \$358.2 million and preferred stock of subsidiaries of \$4.3 million.

Asset and Liability Management and the Management of Interest Rate Risk

We manage our assets and liabilities to reduce our exposure to changes in market interest rates. The asset and liability management process has three primary objectives: to evaluate the interest rate risk inherent in certain balance sheet accounts; to determine the appropriate level of risk, given our business strategy, operating environment, capital and liquidity requirements, and performance objectives; and to manage that risk in a manner consistent with guidelines approved by the Boards of Directors of the Company, the Community Bank, and the Commercial Bank.

Market Risk

As a financial institution, we are focused on reducing our exposure to interest rate volatility, which represents our primary market risk. Changes in market interest rates pose the greatest challenge to our financial performance, as such changes can have a significant impact on the level of income and expense recorded on a large portion of our interest-earning assets and interest-bearing liabilities, and on the market value of all interest-earning assets, other than those possessing a short term to maturity. To reduce our exposure to changing rates, the Boards of Directors and management monitor interest rate sensitivity on a regular or as needed basis so that adjustments to the asset and liability mix can be made when deemed appropriate.

The actual duration of held-for-investment mortgage loans and mortgage-related securities can be significantly impacted by changes in prepayment levels and market interest rates. The level of prepayments may be impacted by a variety of factors, including the economy in the region where the underlying mortgages were originated; seasonal factors; demographic variables; and the assumability of the underlying mortgages. However, the largest determinants of prepayments are market interest rates and the availability of refinancing opportunities.

In the first six months of 2014, we continued to manage our interest rate risk by taking the following actions: (1) We continued to emphasize the origination and retention of intermediate-term assets, primarily in the form of multi-family and CRE loans; (2) We increased our portfolio of C&I loans, which feature floating rates; and (3) We continued to deploy our cash flows into the production of loans held for investment and GSE obligations.

In connection with the activities of our mortgage banking operation, we enter into contingent commitments to fund residential mortgage loans by a specified future date at a stated interest rate and corresponding price. Such commitments, which are generally known as interest rate lock commitments (IRLCs), are considered to be financial derivatives and, as such, are carried at fair value.

To mitigate the interest rate risk associated with our IRLCs, we enter into forward commitments to sell mortgage loans or mortgage-backed securities (MBS) by a specified future date and at a specified price. These forward-sale agreements are also carried at fair value. Such forward commitments to sell generally obligate us to complete the transaction as agreed, and therefore pose a risk to us if we are not able to deliver the loans or MBS pursuant to the terms of the applicable forward-sale agreement. For example, if we are unable to meet our obligation, we may be

required to pay a fee to the counterparty.

When we retain the servicing on the loans we sell, we capitalize an MSR asset. MSRs are recorded at fair value, with changes in fair value recorded as a component of non-interest income. We estimate the fair value of the MSR asset based upon a number of factors, including current and expected loan prepayment rates, economic conditions, and market forecasts, as well as relevant characteristics of the associated underlying loans. Generally, when market interest rates decline, loan prepayments increase as customers refinance their existing mortgages to take advantage of more favorable interest rate terms. When a mortgage prepays, or when loans are expected to prepay earlier than originally expected, a portion of the anticipated cash flows associated with servicing these loans is terminated or reduced, which can result in a reduction in the fair value of the capitalized MSRs and a corresponding reduction in earnings.

To mitigate the prepayment risk inherent in MSRs, we could sell the servicing of the loans we produce, and thus minimize the potential for earnings volatility. Instead, we have opted to mitigate such risk by investing in exchange-traded derivative financial instruments that are expected to experience opposite and offsetting changes in fair value as related to the value of our MSRs.

Table of Contents***Interest Rate Sensitivity Analysis***

The matching of assets and liabilities may be analyzed by examining the extent to which such assets and liabilities are interest rate sensitive and by monitoring a bank's interest rate sensitivity gap. An asset or liability is said to be interest rate sensitive within a specific time frame if it will mature or reprice within that period of time. The interest rate sensitivity gap is defined as the difference between the amount of interest-earning assets maturing or repricing within a specific time frame and the amount of interest-bearing liabilities maturing or repricing within that same period of time.

In a rising interest rate environment, an institution with a negative gap would generally be expected, absent the effects of other factors, to experience a greater increase in the cost of its interest-bearing liabilities than it would in the yield on its interest-earning assets, thus producing a decline in its net interest income. Conversely, in a declining rate environment, an institution with a negative gap would generally be expected to experience a lesser reduction in the yield on its interest-earning assets than it would in the cost of its interest-bearing liabilities, thus producing an increase in its net interest income.

In a rising interest rate environment, an institution with a positive gap would generally be expected to experience a greater increase in the yield on its interest-earning assets than it would in the cost of its interest-bearing liabilities, thus producing an increase in its net interest income. Conversely, in a declining rate environment, an institution with a positive gap would generally be expected to experience a lesser reduction in the cost of its interest-bearing liabilities than it would in the yield on its interest-earning assets, thus producing a decline in its net interest income.

At June 30, 2014, our one-year gap was a negative 13.60%, as compared to a negative 13.66% at December 31, 2013. The change in our one-year gap was primarily attributable to an increase in projected calls on securities and loan prepayments, which was partially offset by an increase in the amount of CDs and borrowings maturing in one year.

The table on the following page sets forth the amounts of interest-earning assets and interest-bearing liabilities outstanding at June 30, 2014 which, based on certain assumptions stemming from our historical experience, are expected to reprice or mature in each of the future time periods shown. Except as stated below, the amounts of assets and liabilities shown as repricing or maturing during a particular time period were determined in accordance with the earlier of (1) the term to repricing, or (2) the contractual terms of the asset or liability.

The table provides an approximation of the projected repricing of assets and liabilities at June 30, 2014 on the basis of contractual maturities, anticipated prepayments, and scheduled rate adjustments within a three-month period and subsequent selected time intervals. For residential mortgage-related securities, prepayment rates are forecasted at a weighted average constant prepayment rate (CPR) of 18% per annum; for multi-family and CRE loans, prepayment rates are forecasted at weighted average CPRs of 25% and 16% per annum, respectively. Borrowed funds were not assumed to prepay. Savings, NOW, and money market accounts were assumed to decay based on a comprehensive statistical analysis that incorporated our historical deposit experience. Based on the results of this analysis, savings accounts were assumed to decay at a rate of 50% for the first five years and 50% for years six through ten. NOW accounts were assumed to decay at a rate of 63% for the first five years and 37% for years six through ten. The comprehensive statistical analysis was updated in the second quarter of 2014 to incorporate updated deposit data and modeling assumptions, and resulted in no decay rates beyond ten years. The change in the decay assumptions was made due to the prolonged low interest rate environment and the uncertainty regarding future depositor behavior. Including those accounts having specified repricing dates, money market accounts were assumed to decay at a rate of 93% for the first five years and at a rate of 7% for years six through ten.

Table of Contents**Interest Rate Sensitivity Analysis**

(dollars in thousands)	At June 30, 2014					
	Three Months or Less	Four to Twelve Months	More Than One Year to Three Years	More Than Three Years to Five Years	More Than Five Years to 10 Years	More Than 10 Years
INTEREST-EARNING ASSETS:						
Mortgage and other loans ⁽¹⁾	\$ 3,809,797	\$5,839,490	\$11,710,498	\$8,349,368	\$ 4,748,131	\$ 355,500
Mortgage-related securities ⁽²⁾⁽³⁾	68,126	148,740	386,554	174,138	3,229,111	413,600
Other securities and money market investments ⁽²⁾	921,271	155,593	6,836	64,175	2,477,796	327,700
Total interest-earning assets	4,799,194	6,143,823	12,103,888	8,587,681	10,455,038	1,097,000
INTEREST-BEARING LIABILITIES:						
NOW and money market accounts	5,959,636	852,053	771,427	1,953,989	2,342,385	
Savings accounts	1,572,712	302,203	1,110,833	210,034	3,203,206	
Certificates of deposit	1,050,489	2,999,109	2,364,653	253,925	49,367	1,600,000
Borrowed funds	4,716,667	100,659	200,563	3,311,007	6,828,429	144,300
Total interest-bearing liabilities	13,299,504	4,254,024	4,447,476	5,728,955	12,423,387	145,900
Interest rate sensitivity gap per period ⁽⁴⁾	\$(8,500,310)	\$1,889,799	\$ 7,656,412	\$2,858,726	\$(1,968,349)	\$ 951,100
Cumulative interest rate sensitivity gap	\$(8,500,310)	\$(6,610,511)	\$1,045,901	\$3,904,627	\$1,936,278	\$2,887,300
Cumulative interest rate sensitivity gap as a percentage of total assets	(17.49)%	(13.60)%	2.15%	8.03%	3.98%	5.90%
Cumulative net interest-earning assets as a percentage of net interest-bearing liabilities	36.09 %	62.34 %	104.75%	114.08%	104.82%	107.10%

- (1) For the purpose of the gap analysis, non-performing non-covered loans and the allowances for loan losses have been excluded.
- (2) Mortgage-related and other securities, including FHLB stock, are shown at their respective carrying amounts.
- (3) Expected amount based, in part, on historical experience.
- (4) The interest rate sensitivity gap per period represents the difference between interest-earning assets and interest-bearing liabilities.

Table of Contents

Prepayment and deposit decay rates can have a significant impact on our estimated gap. While we believe our assumptions to be reasonable, there can be no assurance that the assumed prepayment and decay rates will approximate actual future loan and securities prepayments and deposit withdrawal activity.

To validate our prepayment assumptions for our multi-family and CRE loan portfolios, we perform a monthly analysis, during which we review our historical prepayment rates and compare them to our projected prepayment rates. We continually review the actual prepayment rates to ensure that our projections are as accurate as possible, since prepayments on these types of loans are not as closely correlated to changes in interest rates as prepayments on one-to-four family loans would be. In addition, we review the call provisions in our borrowings and investment portfolios and, on a monthly basis, compare the actual calls to our projected calls to ensure that our projections are reasonable.

As of June 30, 2014, the impact of a 100-basis point decline in market interest rates would have increased our projected prepayment rates by a constant prepayment rate of 1.48% per annum. Conversely, the impact of a 100-basis point increase in market interest rates would have reduced our projected prepayment rates by a constant prepayment rate of 1.73% per annum.

Certain shortcomings are inherent in the method of analysis presented in the preceding Interest Rate Sensitivity Analysis. For example, although certain assets and liabilities may have similar maturities or periods to repricing, they may react in different degrees to changes in market interest rates. The interest rates on certain types of assets and liabilities may fluctuate in advance of the market, while interest rates on other types may lag behind changes in market interest rates. Additionally, certain assets, such as adjustable-rate loans, have features that restrict changes in interest rates both on a short-term basis and over the life of the asset. Furthermore, in the event of a change in interest rates, prepayment and early withdrawal levels would likely deviate from those assumed in calculating the table. Also, the ability of some borrowers to repay their adjustable-rate loans may be adversely impacted by an increase in market interest rates.

Interest rate sensitivity is also monitored through the use of a model that generates estimates of the change in our net portfolio value (NPV) over a range of interest rate scenarios. NPV is defined as the net present value of expected cash flows from assets, liabilities, and off-balance sheet contracts. The NPV ratio, under any interest rate scenario, is defined as the NPV in that scenario divided by the market value of assets in the same scenario. The model assumes estimated loan prepayment rates, reinvestment rates, and deposit decay rates similar to those utilized in formulating the preceding Interest Rate Sensitivity Analysis.

Based on the information and assumptions in effect at June 30, 2014, the following table reflects the estimated percentage change in our NPV, assuming the changes in interest rates noted:

Change in Interest Rates	Estimated Percentage Change in
(in basis points) ⁽¹⁾	Net Portfolio Value
+100	(5.54)%
+200	(12.16)

(1) The impact of 100- and 200-basis point reductions in interest rates is not presented in view of the current level of the fed funds rate and other short-term interest rates.

The net changes in NPV presented in the preceding table are within the parameters approved by the Boards of Directors of the Company and the Banks.

As with the Interest Rate Sensitivity Analysis, certain shortcomings are inherent in the methodology used in the preceding interest rate risk measurements. Modeling changes in NPV requires that certain assumptions be made which may or may not reflect the manner in which actual yields and costs respond to changes in market interest rates. In this regard, the NPV Analysis presented above assumes that the composition of our interest rate sensitive assets and liabilities existing at the beginning of a period remains constant over the period being measured, and also assumes that a particular change in interest rates is reflected uniformly across the yield curve, regardless of the duration to maturity or repricing of specific assets and liabilities. Furthermore, the model does not take into account the benefit of any strategic actions we may take to further reduce our exposure to interest rate risk. Accordingly, while the NPV Analysis provides an indication of our interest rate risk exposure at a particular point in time, such measurements are not intended to, and do not, provide a precise forecast of the effect of changes in market interest rates on our net interest income, and may very well differ from actual results.

We also utilize an internal net interest income simulation to manage our sensitivity to interest rate risk. The simulation incorporates various market-based assumptions regarding the impact of changing interest rates on future levels of our financial assets and liabilities. The assumptions used in the net interest income simulation are inherently uncertain. Actual results may differ significantly from those presented in the following table, due to the frequency, timing, and magnitude of changes in interest rates; changes in spreads between maturity and repricing categories; and prepayments, among other factors, coupled with any actions taken to counter the effects of any such changes.

Table of Contents

Based on the information and assumptions in effect at June 30, 2014, the following table reflects the estimated percentage change in future net interest income for the next twelve months, assuming the changes in interest rates noted:

Change in Interest Rates

(in basis points) ⁽¹⁾⁽²⁾	Estimated Percentage Change in Future Net Interest Income
+100 over one year	(3.69)%
+200 over one year	(7.07)

(1) In general, short- and long-term rates are assumed to increase in parallel fashion across all four quarters and then remain unchanged.

(2) The impact of 100- and 200-basis point reductions in interest rates is not presented in view of the current level of the fed funds rate and other short-term interest rates.

Future changes in our mix of assets and liabilities may result in greater changes to our gap, NPV, and/or net interest income simulation.

In the event that our interest rate sensitivity gap analysis or net interest income simulation were to indicate a variance in our NPV in excess of our internal policy limits, we would undertake the following actions to ensure that appropriate remedial measures were put in place:

Our Management Asset and Liability Committee (the ALCO Committee) would inform the Board of Directors of the variance, and present recommendations to the Board regarding proposed courses of action to restore conditions to within-policy tolerances.

In formulating appropriate strategies, the ALCO Committee would ascertain the primary causes of the variance from policy tolerances, the expected term of such conditions, and the projected effect on capital and earnings.

Where temporary changes in market conditions or volume levels result in significant increases in risk, strategies may involve reducing open positions or employing synthetic hedging techniques to more immediately reduce risk exposure. Where variance from policy tolerances is triggered by more fundamental imbalances in the risk profiles of core loan and deposit products, a remedial strategy may involve restoring balance through natural hedges to the extent possible before employing synthetic hedging techniques. Other strategies might include:

Asset restructuring, involving sales of assets having higher risk profiles, or a gradual restructuring of the asset mix over time to affect the maturity or repricing schedule of assets;

Liability restructuring, whereby product offerings and pricing would be altered or wholesale borrowings employed to affect the maturity structure or repricing of liabilities;

Expansion or shrinkage of the balance sheet to correct imbalances in the repricing or maturity periods between assets and liabilities; and/or

Use or alteration of off-balance-sheet positions, including interest rate swaps, caps, floors, options, and forward purchase or sales commitments.

In connection with our net interest income simulation modeling, we also evaluate the impact of changes in the slope of the yield curve. At June 30, 2014, our analysis indicated that an immediate inversion of the yield curve would be expected to result in a 5.87% decrease in net interest income over the next four quarters; conversely, an immediate steepening of the yield curve would be expected to result in a 3.86% increase in net interest income over such time.

Liquidity, Contractual Obligations and Off-Balance-Sheet Commitments, and Capital Position

Liquidity

We manage our liquidity to ensure that cash flows are sufficient to support our operations, and to compensate for any temporary mismatches between sources and uses of funds caused by variable loan and deposit demand.

We monitor our liquidity daily to ensure that sufficient funds are available to meet our financial obligations. Our most liquid assets are cash and cash equivalents, which totaled \$669.0 million and \$644.6 million, respectively, at June 30, 2014 and December 31, 2013. As in the past, our portfolios of loans and securities provided liquidity in the current six-month period, with cash flows from the repayment and sale of loans totaling \$5.1 billion and cash flows from the repayment and sale of securities totaling \$421.4 million.

Table of Contents

Additional liquidity stems from the deposits we gather through our branches or acquire in business combinations, and from our use of wholesale funding sources, including brokered deposits and wholesale borrowings. We also have access to the Banks' approved lines of credit with various counterparties, including the FHLB-NY. The availability of these wholesale funding sources is generally based on the available amount of mortgage loan collateral under a blanket lien we have pledged to the respective institutions and, to a lesser extent, the available amount of securities that may be pledged to collateralize our borrowings. At June 30, 2014, our available borrowing capacity with the FHLB-NY was \$5.9 billion. In addition, the Community Bank and the Commercial Bank had \$243.0 million in available-for-sale securities, combined, at that date.

Furthermore, the Community Bank has an agreement with the Federal Reserve Bank of New York (the FRB-NY) that enables it to access the discount window as a further means of enhancing its liquidity if need be. In connection with this agreement, the Community Bank has pledged certain loans and securities to collateralize any funds it may borrow. At June 30, 2014, the maximum amount the Community Bank could borrow from the FRB-NY was \$1.7 billion. There were no borrowings against this line of credit at that date.

Our primary investing activity is loan production. In the first six months of 2014, the total volume of loans originated for sale and for investment was \$7.1 billion. During this time, the net cash used in investing activities totaled \$1.7 billion. Our financing activities provided net cash of \$1.7 billion in the current six-month period, and our operating activities provided net cash of \$98.0 million during this time.

CDs due to mature in one year or less from June 30, 2014 totaled \$4.0 billion, representing 60.3% of total CDs at that date. Our ability to retain these CDs and to attract new deposits depends on numerous factors, including customer satisfaction, the rates of interest we pay on our deposits, the types of products we offer, and the attractiveness of their terms. However, there are times when we may choose not to compete for such deposits, depending on the availability of lower-cost funding, the competitiveness of the market and its impact on pricing, and our need for such deposits to fund loan demand.

The Company (the Parent Company) is a separate legal entity from each of the Banks and must provide for its own liquidity. In addition to operating expenses and any share repurchases, the Parent Company is responsible for paying any dividends declared to our shareholders. As a Delaware corporation, the Parent Company is able to pay dividends either from surplus or, in case there is no surplus, from net profits for the fiscal year in which the dividend is declared and/or the preceding fiscal year. In addition, the Parent Company is not required to obtain prior Federal Reserve approval to pay a dividend unless the declaration and payment of a dividend could raise supervisory concerns about the safe and sound operation of the Company and the Banks, the dividend declared for a period is not supported by earnings for that period, or the Company plans to declare an increase in its dividend.

The Parent Company's ability to pay dividends may depend, in part, upon the dividends it receives from the Banks. The ability of the Community Bank and the Commercial Bank to pay dividends and other capital distributions to the Parent Company is generally limited by New York State banking law and regulations, and by certain regulations of the FDIC. In addition, the Superintendent of the New York State Department of Financial Services (the Superintendent), the FDIC, and the Federal Reserve, for reasons of safety and soundness, may prohibit the payment of dividends that are otherwise permissible by regulations.

Under New York State Banking Law, a New York State-chartered stock-form savings bank or commercial bank may declare and pay dividends out of its net profits, unless there is an impairment of capital. However, the approval of the Superintendent is required if the total of all dividends declared in a calendar year would exceed the total of a bank's net profits for that year, combined with its retained net profits for the preceding two years. In the six months ended June 30, 2014, the Banks paid dividends totaling \$215.0 million to the Parent Company, leaving \$122.2 million that

they could dividend to the Parent Company without regulatory approval at that date. Additional sources of liquidity available to the Parent Company at June 30, 2014 included \$118.8 million in cash and cash equivalents and \$2.0 million of available-for-sale securities. If either of the Banks were to apply to the Superintendent for approval to make a dividend or capital distribution in excess of the dividend amounts permitted under the regulations, there can be no assurance that such application would be approved.

Derivative Financial Instruments

We use various financial instruments, including derivatives, in connection with our strategies to mitigate or reduce our exposure to losses from adverse changes in interest rates. Our derivative financial instruments consist of financial forward and futures contracts, IRLCs, swaps, and options, and relate to our mortgage banking operation, MSR, and other risk management activities. These activities will vary in scope based on the level and volatility of interest rates, the types of assets held, and other changing market conditions. At June 30, 2014, we held derivative financial instruments with a notional value of \$2.2 billion. (Please see Note 12, Derivative Financial Instruments, for a further discussion of our use of such financial instruments.)

Table of Contents**Capital Position**

In the first six months of 2014, stockholders' equity rose \$25.4 million to \$5.8 billion, representing 11.85% of total assets and a book value of \$13.01 per share at June 30, 2014. At December 31, 2013, stockholders' equity represented 12.29% of total assets and book value per share was \$13.01 as it was at the end of June. We calculate book value per share by dividing the amount of stockholders' equity at the end of a period by the number of shares outstanding at the same date. At June 30, 2014, we had 442,655,048 shares outstanding; at December 31, 2013, the number of outstanding shares was 440,809,365.

Tangible stockholders' equity rose \$29.8 million in the first six months of this year, to \$3.3 billion, after the distribution of quarterly cash dividends totaling \$110.6 million. Tangible stockholders' equity represented 7.18% of tangible assets at the end of the second quarter and 7.42% of tangible assets at the end of last year. Tangible book value equaled \$7.48 and \$7.45 per share at the respective period-ends.

We calculate tangible stockholders' equity by subtracting the amount of goodwill and CDI recorded at the end of a period from the amount of stockholders' equity recorded at the same date. At both June 30, 2014 and December 31, 2013, we recorded goodwill of \$2.4 billion; we recorded CDI of \$11.8 million and \$16.2 million, respectively, at the corresponding dates.

Excluding AOCL from the respective calculations, the ratio of adjusted tangible stockholders' equity to adjusted tangible assets was 7.24% at June 30, 2014, as compared to 7.50% at December 31, 2013. (Please see the discussion and reconciliations of stockholders' equity and tangible stockholders' equity, total assets and tangible assets, and the related capital measures that appear earlier in this report.)

AOCL declined \$3.9 million from the year-end amount to \$32.6 million at the end of the second quarter as the net unrealized gain on available-for-sale securities rose \$2.8 million to \$3.1 million, and the net unrealized loss on pension and post-retirement obligations declined \$1.1 million to \$30.1 million. At the end of June, the net unrealized loss on the non-credit portion of OTTI losses on securities was \$5.6 million, comparable to the balance at December 31, 2013. Each of the respective balances were net of tax.

At June 30, 2014, our capital measures continued to exceed the minimum federal requirements for a bank holding company. The following table sets forth our leverage, Tier 1 risk-based, and total risk-based capital amounts and ratios on a consolidated basis, as well as the respective minimum regulatory capital requirements, at that date:

Regulatory Capital Analysis (the Company)

(dollars in thousands)	At June 30, 2014					
	Leverage Capital		Risk-Based Capital			
	Amount	Ratio	Tier 1		Total	
	Amount	Ratio	Amount	Ratio	Amount	Ratio
Total capital	\$3,689,153	8.12%	\$3,689,153	12.20%	\$3,880,598	12.83%
Regulatory capital requirement	1,817,723	4.00	1,209,510	4.00	2,419,021	8.00
Excess	\$1,871,430	4.12%	\$2,479,643	8.20%	\$1,461,577	4.83%

In addition, the capital ratios for the Community Bank and the Commercial Bank continued to exceed the minimum levels required for classification as well capitalized institutions at June 30, 2014, as defined under the Federal Deposit Insurance Corporation Improvement Act of 1991, and as reflected in the following tables:

Regulatory Capital Analysis (New York Community Bank)

(dollars in thousands)	At June 30, 2014					
	Leverage Capital		Risk-Based Capital			
	Amount	Ratio	Tier 1		Total	
	Amount	Ratio	Amount	Ratio	Amount	Ratio
Total capital	\$3,215,390	7.66%	\$3,215,390	11.60%	\$3,395,204	12.25%
Regulatory capital requirement	1,679,559	4.00	1,108,977	4.00	2,217,953	8.00
Excess	\$1,535,831	3.66%	\$2,106,413	7.60%	\$1,177,251	4.25%

Basel III Capital Rules

In July 2013, the Company's primary federal regulator, the Federal Reserve, and the Banks' primary federal regulator, the FDIC, published final rules (the Basel III Capital Rules) establishing a new comprehensive capital framework for U.S. banking organizations. The rules implement the Basel Committee's December 2010 framework, known as Basel III, for strengthening international capital standards as well as certain provisions of the Dodd-Frank Act.

The Basel III Capital Rules substantially revise the current U.S. risk-based capital rules and requirements applicable to bank holding companies and depository institutions, including the Company and the Banks, as indicated below:

They define the components of capital and address other issues affecting the numerator in banking institutions regulatory capital ratios;

They address risk weights and other issues affecting the denominator in banking institutions regulatory capital ratios;

They replace the existing risk-weighting approach, which was derived from the Basel I capital accords of the Basel Committee, with a more risk-sensitive approach based, in part, on the standardized approach in the Basel Committee's 2004 Basel II capital accords; and

They implement the requirements of Section 939A of the Dodd-Frank Act to remove references to credit ratings from the federal banking agencies' rules.

The Basel III Capital Rules will be effective for the Company and the Banks on January 1, 2015, subject to a phase-in period.

In addition, and among other things, the Basel III Capital Rules:

Introduce a new capital measure called Common Equity Tier 1 (CET1);

Specify that Tier 1 capital consists of CET1 and Additional Tier 1 Capital instruments meeting specified requirements;

Define CET1 narrowly by requiring that most deductions/adjustments to regulatory capital measures be made to CET1, and not to the other components of capital; and

Expand the scope of the deductions/adjustments from capital as compared to existing regulations.

The Basel III Capital Rules provide for a number of deductions from, and adjustments to, CET1. These include, for example, the requirement that MSRs, certain deferred tax assets dependent upon future taxable income, and significant investments in non-consolidated financial entities be deducted from CET1 to the extent that any one such category exceeds 10% of CET1 or all such categories in the aggregate exceed 15% of CET1.

In addition, under current capital standards, the effects of accumulated other comprehensive income items included in capital are excluded for the purposes of determining regulatory capital ratios. Under the Basel III Capital Rules, the effects of certain accumulated other comprehensive income items are not excluded; however, non-advanced approach banking organizations, including the Company and the Banks, may make a one-time permanent election to continue to exclude these items. We expect to make this election in order to avoid significant variations in the level of capital depending upon the impact of interest rate fluctuations on the fair value of our securities portfolio.

The Basel III Capital Rules also exclude the inclusion of certain hybrid securities, such as trust preferred securities, as Tier 1 capital of bank holding companies, subject to phase-out. As a result, beginning in 2015, only 25% of the Company's trust preferred securities will be included in Tier 1 capital and, in 2016, none of the Company's trust preferred securities will be included in Tier 1 capital. Trust preferred securities no longer included in the Company's Tier 1 capital may nonetheless be included as a component of Tier 2 capital on a permanent basis without phase-out.

Table of Contents

Implementation of the deductions and other adjustments to CET1 will begin on January 1, 2015 and will be phased in over a four-year period, beginning at 40% on January 1, 2015 and continuing thereafter with an additional 20% per calendar year. The implementation of the capital conservation buffer will begin on January 1, 2016 at the 0.625% level and be phased in over a four-year period, increasing by that amount on each subsequent January 1st, until it reaches 2.5% on January 1, 2019.

Under the Basel III Capital Rules, the initial minimum capital ratios as of January 1, 2015 will be as follows:

- 4.5% CET1 to risk-weighted assets;
- 6.0% Tier 1 capital to risk-weighted assets; and
- 8.0% Total capital to risk-weighted assets.

When fully phased in on January 1, 2019, the Basel III Capital Rules will require the Company and the Banks to maintain:

- a minimum ratio of CET1 to risk-weighted assets of at least 4.5%, plus a 2.5% capital conservation buffer designed to absorb losses during periods of economic stress (which is added to the 4.5% CET1 ratio as that buffer is phased in, effectively resulting in a minimum ratio of CET1 to risk-weighted assets of at least 7% upon full implementation);
- a minimum ratio of Tier 1 capital to risk-weighted assets of at least 6.0%, plus the capital conservation buffer (which is added to the 6.0% Tier 1 capital ratio as that buffer is phased in, effectively resulting in a minimum Tier 1 capital ratio of 8.5% upon full implementation);
- a minimum ratio of Total capital (i.e., Tier 1 plus Tier 2) to risk-weighted assets of at least 8.0%, plus the capital conservation buffer (which is added to the 8.0% total capital ratio as that buffer is phased in, effectively resulting in a minimum Total capital ratio of 10.5% upon full implementation); and
- a minimum leverage capital ratio of 4.0%, calculated as the ratio of Tier 1 capital to average assets (as compared to a current minimum leverage capital ratio of 3.0% for banking organizations that either have the highest supervisory rating or have implemented the appropriate federal regulatory authority's risk-adjusted measure for market risk).

Management believes that, as of June 30, 2014, the Company and the Banks would meet all capital adequacy requirements under the Basel III Capital Rules on a fully phased-in basis if such requirements were effective as of that date.

Earnings Summary for the Three Months Ended June 30, 2014

In the three months ended June 30, 2014, we generated earnings of \$118.7 million, or \$0.27 per diluted share, as compared to \$115.3 million, or \$0.26 per diluted share, in the trailing quarter and \$122.5 million, or \$0.28 per diluted share, in the year-earlier three months.

In the first quarter of 2014, our earnings were reduced by a one-time charge to income tax expense of \$4.5 million that was recorded in connection with certain tax legislation enacted by the State of New York on March 31, 2014. The impact of the tax charge was partly offset by a one-time after-tax gain of \$2.3 million on the sale of Visa Class B shares.

The following factors contributed to our current second quarter earnings:

Net interest income totaled \$283.5 million in the current second quarter, a \$658,000 decrease from the trailing-quarter level and a \$16.4 million decrease from the year-earlier amount. While the linked-quarter decline was primarily due to the replenishment of the balance sheet with lower-yielding assets, the year-over-year decline was primarily due to a \$25.2 million reduction in prepayment penalty income, as refinancing activity and property transactions in our primary market niche declined.

Non-interest income totaled \$52.6 million in the current second quarter, reflecting a \$15.4 million increase from the trailing-quarter level and a \$1.2 million decrease year-over-year. The sequential increase was largely due to a \$10.8 million rise in other non-interest income and, to a lesser extent, a \$681,000 increase in mortgage banking income. In addition, the Company recorded FDIC indemnification income of \$150,000 in the current second quarter, in contrast to FDIC indemnification expense of \$11.7 million in the trailing three-month period. The latter expense was tempered by the \$3.9 million gain on the sale of Visa Class B shares recorded in the first quarter of this year.

Table of Contents

The year-over-year decline in non-interest income was largely the net effect of a \$7.9 million decrease in mortgage banking income, a \$3.5 million decrease in FDIC indemnification income, and an \$11.2 million increase in other income.

Reflecting the quality of our assets and the adequacy of our non-covered loan loss allowance, we recorded no provision for losses on non-covered loans in the first or second quarters of this year. In the second quarter of 2013, we recorded a provision for non-covered loan losses of \$5.0 million. In addition, a decrease in expected cash flows on the covered loans we acquired in connection with our FDIC-assisted transactions resulted in provisions for covered loan losses of \$188,000 and \$4.6 million, respectively, in the three months ended June 30, 2014 and 2013; in the first quarter of this year, we recorded a recovery of \$14.6 million from the allowance for covered loan losses, reflecting an increase in expected cash flows on our covered loans.

Non-interest expense rose \$1.5 million sequentially, and declined \$3.8 million from the year-earlier level, to \$147.8 million in the three months ended June 30, 2014. The linked-quarter increase was the net effect of a \$1.8 million rise in operating expenses and a \$241,000 decline in CDI amortization, while the year-over-year decrease was the result of a \$1.7 million reduction in operating expenses and a \$2.1 million reduction in the amortization of CDI.

Income tax expense fell \$5.1 million sequentially and \$456,000 year-over-year to \$69.4 million in the three months ended June 30, 2014. While the linked-quarter reduction was primarily due to the one-time \$4.5 million charge to income tax expense recorded in the first quarter, the year-over-year reduction largely reflects a decline in pre-tax income.

Net Interest Income

Net interest income is our primary source of income. Its level is a function of the average balance of our interest-earning assets, the average balance of our interest-bearing liabilities, and the spread between the yield on such assets and the cost of such liabilities. These factors are influenced by both the pricing and mix of our interest-earning assets and our interest-bearing liabilities which, in turn, are impacted by various external factors, including the local economy, competition for loans and deposits, the monetary policy of the Federal Open Market Committee of the Federal Reserve Board of Governors (the FOMC), and market interest rates.

The cost of our deposits and borrowed funds is largely based on short-term rates of interest, the level of which is partially impacted by the actions of the FOMC. The FOMC reduces, maintains, or increases the target fed funds rate (the rate at which banks borrow funds overnight from one another) as it deems necessary. The target fed funds rate has been maintained at a range of zero to 0.25% since the fourth quarter of 2008.

While the target fed funds rate generally impacts the cost of our short-term borrowings and deposits, the yields on our held-for-investment loans and other interest-earning assets are typically impacted by intermediate-term market interest rates. In the second quarter of 2014, the average five-year CMT rose to 1.66% from 1.60% in the trailing quarter and from 0.91% in the second quarter of last year. Meanwhile, the average ten-year CMT fell to 2.62% from 2.77% in the trailing quarter, but rose from 1.99% in the year-earlier three months.

Net interest income is also influenced by the level of prepayment penalty income generated, primarily in connection with the prepayment of our multi-family and CRE loans. Since prepayment penalty income is recorded as interest income, an increase or decrease in its level will also be reflected in the average yields on our loans and interest-earning assets, and therefore, in our interest rate spread and net interest margin. After four consecutive quarters of robust activity in New York City, where most of our multi-family and CRE loans are originated, property transactions declined substantially in the first quarter of 2014. In the second quarter of 2014, prepayment penalty income declined modestly from the first-quarter level and more substantially from the year-earlier amount.

Net interest income totaled \$283.5 million in the current second quarter, reflecting a sequential decrease of \$658,000 and a year-over-year decrease of \$16.4 million. While the linked-quarter decline was the net effect of a \$3.2 million increase in interest expense and a \$2.6 million increase in interest income, the year-over-year decline was the net effect of an \$18.7 million reduction in interest income and a \$2.3 million decrease in interest expense. Interest income totaled \$417.9 million in the current second quarter, while interest expense totaled \$134.4 million.

In addition, our net interest margin was 2.66% in the current second quarter, six basis points lower than the trailing-quarter measure and 49 basis points lower than the measure in the year-earlier three months.

Table of Contents

The following factors contributed to the linked-quarter declines in our net interest income and net interest margin:

Prepayment penalty income accounted for \$19.3 million and \$20.4 million, respectively, of the interest income we recorded in the three months ended June 30, 2014 and March 31, 2014. In addition, prepayment penalty income contributed 18 basis points to the current second-quarter margin and 19 basis points to the margin in the first quarter of this year.

The average balance of interest-earning assets rose \$1.0 billion sequentially to \$42.6 billion, the net effect of a \$1.1 billion increase in the average balance of loans to \$34.1 billion and a \$104.9 million decrease in the average balance of securities and money market investments to \$8.4 billion. The benefit of the increase in the average balance of interest-earning assets was tempered by the impact of a seven-basis point decline in the average yield to 3.93%. Primarily reflecting the replenishment of the balance sheet with lower-yielding assets, the average yield on loans fell eight basis points to 4.11% in the current second quarter, while the average yield on securities and money market investments fell 10 basis points to 3.19%.

In the second quarter of 2014, the average balance of interest-bearing liabilities rose \$757.1 million sequentially to \$39.3 billion, as a \$942.3 million increase in the average balance of interest-bearing deposits to \$24.5 billion was tempered by a \$185.3 million reduction in the average balance of borrowed funds to \$14.9 billion. Meanwhile, the average cost of interest-bearing liabilities declined one basis point to 1.37% in the current second quarter, even as the average costs of interest-bearing deposits and borrowed funds rose one and three basis points, respectively, to 0.59% and 2.65%.

The following factors contributed to the year-over-year decline in our net interest income and net interest margin:

Primarily reflecting the aforementioned decline in property transactions and refinancing activity, prepayment penalty income fell \$25.2 million year-over-year to \$19.3 million and contributed 29 fewer basis points to our net interest margin in the current second quarter than it did in the second quarter of 2013.

The average balance of interest-earning assets rose \$4.6 billion year-over-year as a \$2.4 billion increase in the average balance of securities and money market investments combined with a \$2.2 billion increase in the average balance of loans. The benefit of the rise in the average balance of interest-earning assets was exceeded by the impact of a 67-basis point decline in the average yield. While the average yield on securities and money market investments was consistent with the yield recorded in the year-earlier second quarter, the yield on loans fell 75 basis points during this time. The latter decline was attributable to the reduction in prepayment penalty income as well as the replenishment of the loan portfolio with lower-yielding loans. While the average balance of interest-bearing liabilities rose \$4.1 billion year-over-year, the impact was exceeded by the benefit of a 19-basis point decline in the average cost of funds. Interest-bearing deposits accounted for \$1.7 billion of the increase in the average balance, while borrowed funds accounted for the remaining \$2.4 billion. Notwithstanding the growth in average interest-bearing deposits and borrowed funds in the current second quarter, the respective costs of such funds fell six basis points and 57 basis points, respectively, year-over-year.

It should be noted that the level of prepayment penalty income recorded in any given period depends on the volume of loans that refinance or prepay during that time. Such activity is largely dependent on such external factors as current market conditions, including real estate values, and the perceived or actual direction of market interest rates. In addition, while a decline in market interest rates may trigger an increase in refinancing and, therefore, prepayment penalty income, so too may an increase in market interest rates. It is not unusual for borrowers to lock in lower interest rates when they expect, or see, that market interest rates are rising rather than risk refinancing later at a still higher

interest rate.

Furthermore, the level of prepayment penalty income recorded when a loan prepays is a function of the remaining principal balance, as well as the number of years remaining on the loan. The number of years dictates the number of prepayment penalty points that are charged on the remaining principal balance, based on a sliding scale of five percentage points to one, as discussed under Multi-Family Loans and Commercial Real Estate Loans earlier in this report.

The following tables set forth certain information regarding our average balance sheet for the quarters indicated, including the average yields on our interest-earning assets and the average costs of our interest-bearing liabilities. Average yields are calculated by dividing the interest income produced by the average balance of interest-earning assets. Average costs are calculated by dividing the interest expense produced by the average balance of interest-bearing liabilities. The average balances for the year are derived from average balances that are calculated daily. The average yields and costs include fees, as well as premiums and discounts (including mark-to-market adjustments from acquisitions), that are considered adjustments to such average yields and costs.

Provisions for/(Recovery of) Loan Losses

Provision for Losses on Non-Covered Loans

The provision for losses on non-covered loans is based on management's periodic assessment of the adequacy of the allowance for losses on such loans which, in turn, is based on its evaluation of inherent losses in the held-for-investment loan portfolio in accordance with GAAP. This evaluation considers several factors, including the current and historical performance of the portfolio; its inherent risk characteristics; the level of non-performing non-covered loans and charge-offs; delinquency levels and trends; local economic and market conditions; declines in real estate values; and the levels of unemployment and vacancy rates.

As a result of management's assessment of these factors, including the low level of non-performing non-covered loans and charge-offs, no provision for losses on non-covered loans was recorded in the first or second quarter of 2014. In the second quarter of 2013, we recorded a provision of \$5.0 million. Reflecting current second-quarter net recoveries of \$112,000, the allowance for losses on non-covered loans was \$139.5 million at June 30, 2014, as compared to \$139.4 million at March 31, 2014.

Provision for/(Recovery of) Losses on Covered Loans

A provision for losses on covered loans is recorded when the cash flows from certain loan portfolios acquired in our FDIC-assisted acquisitions are expected to be less than the cash flows we expected at the time of acquisition, as a result of a deterioration in credit quality.

When we have reason to believe that the cash flows from acquired loans will exceed our original expectations (in other words, when the credit quality of certain pools of acquired loans appears to increase), we reverse the previously established covered loan loss allowance by recording a recovery and increase our interest income as a prospective yield adjustment over the remaining life of the loans or pool of loans.

Table of Contents

In the three months ended June 30, 2014 and 2013, respectively, we provided \$188,000 and \$4.6 million for covered loan losses as the credit quality of certain acquired loans appeared to decline. Conversely, in the three months ended March 31, 2014, we recovered \$14.6 million from the allowance for covered loan losses as the credit quality of certain acquired loans appeared to improve.

Because losses on covered loans are largely reimbursable under our FDIC loss sharing agreements, the provisions recorded in the current and year-earlier second quarters were partially offset by FDIC indemnification income of \$150,000 and \$3.7 million, respectively. Conversely, the recovery we recorded in the first quarter of this year was partially offset by FDIC indemnification expense of \$11.7 million. FDIC indemnification income and expense are both recorded in Non-interest income during the same quarter that a provision or recovery occurs.

For additional information about our provisions for loan losses, please see the discussion of the respective loan loss allowances under Critical Accounting Policies and the discussion of Asset Quality that appear earlier in this report.

Non-Interest Income

We generate non-interest income through a variety of sources, some of which are recurring and some of which are not.

Mortgage banking income is our primary source of non-interest income, and includes income from the origination of one-to-four family loans for sale and income from the servicing of these and other one-to-four family loans. Our other recurring sources of non-interest income are fee income (in the form of retail deposit fees and charges on loans); income from our investment in BOLI; and other income, which is derived from various sources, including the sale of third-party investment products in our branches and the revenues from our wholly-owned subsidiary, Peter B. Cannell & Co., Inc. (PBC), an investment advisory firm. From time to time, these recurring sources of non-interest income are supplemented by FDIC indemnification income/(expense) in any quarter when a provision for/(recovery of) losses on covered loans is recorded and gains on the sale of securities, which depend on market conditions and our corporate strategies.

Non-interest income rose \$15.4 million sequentially, to \$52.6 million in the current second quarter, and declined \$1.2 million from the year-earlier amount. The sequential increase was primarily due to a \$10.8 million rise in other non-interest income to \$20.6 million, partly reflecting the benefit of a \$6.0 million gain on the sale of OREO in the current second quarter, together with a \$1.5 million increase in the revenues produced by PBC.

The sequential increase in non-interest income was further supported by a \$681,000 rise in mortgage banking income to \$15.3 million, the net effect of a \$1.1 million rise in income from originations to \$4.9 million and a \$464,000 decrease in servicing income to \$10.4 million. The increase in income from originations reflects the increase in the demand for one-to-four family mortgage loans over the course of the quarter, as residential mortgage interest rates declined.

In addition, we recorded FDIC indemnification income of \$150,000 in the current second quarter, in contrast to FDIC indemnification expense of \$11.7 million in the three months ended March 31, 2014. The impact of the FDIC indemnification expense recorded in the trailing quarter was somewhat offset by a \$3.9 million gain on the sale of Visa Class B shares during that time.

The modest year-over-year decline in non-interest income was primarily due to a \$7.9 million decrease in mortgage banking income, the net effect of a \$12.2 million decline in income from originations and a \$4.2 million rise in servicing income. In addition, FDIC indemnification income fell \$3.5 million year-over-year in the current second quarter, while fee income and BOLI income declined by more modest amounts. The impact of the collective declines

was largely offset by an \$11.2 million increase in total other income, driven by the aforementioned gain on the sale of OREO in the current second quarter and by a \$3.0 million increase in revenues produced by PBC.

Table of Contents

The following table summarizes the components of non-interest income for the three months ended June 30, 2014, March 31, 2014, and June 30, 2013:

Non-Interest Income Analysis

(in thousands)	For the Three Months Ended		
	June 30, 2014	March 31, 2014	June 30, 2013
Mortgage banking income	\$15,291	\$ 14,610	\$23,216
Fee income	9,430	8,894	9,961
BOLI income	6,813	6,829	7,337
Net gain on sales of securities	262	4,873	123
FDIC indemnification income (expense)	150	(11,704)	3,694
Gain on Visa shares sold	--	3,856	--
Other income:			
Peter B. Cannell & Co., Inc.	6,934	5,484	3,912
Third-party investment product sales	3,528	3,661	4,203
Other	10,185	732	1,299
Total other income	20,647	9,877	9,414
Total non-interest income	\$52,593	\$ 37,235	\$53,745

It should be noted that the amount of mortgage banking income we record in any given quarter is likely to vary, and therefore is difficult to predict. Mortgage banking income depends, in large part, on the volume of loans originated which, in turn, depends on a variety of factors, including changes in market interest rates and economic conditions, competition, refinancing activity, and residential mortgage loan demand.

Non-Interest Expense

Non-interest expense has two primary components: operating expenses, which include compensation and benefits, occupancy and equipment, and general and administrative (G&A) expenses; and the amortization of the CDI stemming from certain of our business combinations prior to 2009.

Non-interest expense totaled \$147.8 million in the current second quarter, a linked-quarter increase of \$1.5 million and a \$3.8 million decrease from the year-earlier amount. The linked-quarter increase was the net effect of a \$1.8 million rise in operating expenses to \$145.8 million and a \$241,000 decrease in CDI amortization to \$2.1 million. The year-over-year decline was attributable to a \$1.7 million reduction in operating expenses together with a \$2.1 million decline in the amortization of CDI.

The sequential increase in operating expenses was due to a \$4.3 million rise in G&A expense to \$46.5 million, primarily reflecting costs associated with the management and disposition of the multi-family properties that transitioned to OREO in the second quarter and were subsequently sold. The rise in G&A expense was largely tempered by a \$1.6 million decline in occupancy and equipment expense to \$24.4 million and an \$897,000 decline in compensation and benefits expense to \$74.8 million. In the first quarter of this year, our occupancy and equipment expense was increased by the impact of the winter weather on our facilities in New York, New Jersey, and Ohio.

The year-over-year decline in operating expenses was the net effect of a \$2.6 million reduction in compensation and benefits expense and an \$827,000 increase in G&A expense and occupancy and equipment expense, combined. The decline in compensation and benefits expense primarily reflects a decrease in pension-related costs.

Income Tax Expense

Income tax expense includes federal, New York State, and New York City income taxes, as well as non-material income taxes from other jurisdictions where we have branch operations and/or conduct our mortgage banking business.

In the three months ended June 30, 2014, income tax expense fell \$5.1 million sequentially to \$69.4 million, and the effective tax rate fell to 36.9% from 39.2%. While pre-tax income declined \$1.6 million during this time, to \$188.1 million, the sequential decline in income tax expense was largely due to the one-time charge to income tax expense of \$4.5 million recorded in the trailing quarter in connection with the enactment of certain New York State tax legislation on March 31st.

Table of Contents

Year-over-year, our income tax expense fell \$456,000, as pre-tax income declined \$4.3 million and the effective tax rate rose 59 basis points.

Earnings Summary for the Six Months Ended June 30, 2014**Net Income**

In the first six months of 2014 and 2013, we generated earnings of \$233.9 million and \$241.2 million, equivalent to \$0.53 and \$0.55 per diluted share, respectively. Although pre-tax income was \$377.8 million in the first six months of 2014 and \$377.5 million in the year-earlier six-month period, income tax expense rose \$7.5 million year-over-year. The latter increase was primarily due to the one-time charge to income tax expense of \$4.5 million that was recorded in the first quarter of 2014.

The modest rise in pre-tax income was the result of various offsetting factors. Non-interest income fell \$39.5 million year-over-year to \$89.8 million, as a \$19.4 million decrease in mortgage banking income combined with an \$11.6 million decrease in net securities gains. In addition, we recorded FDIC indemnification expense of \$11.6 million in the current six-month period vs. FDIC indemnification income of \$7.3 million in the first six months of 2013. The impact of these declines was partly offset by a \$7.9 million increase in other income and a \$3.9 million gain on the sale of Visa Class B shares.

Net interest income fell \$7.4 million year-over-year, to \$567.6 million, as the benefit of a \$4.5 billion rise in interest-earning assets was exceeded by the impact of a 56-basis point decline in the average yield. This decline was attributable to a 16-basis point decrease in prepayment penalty income, together with the replenishment of the loan portfolio at lower yields.

The combination of these declines was nonetheless exceeded by various factors, including a \$13.6 million decline in non-interest expense to \$294.2 million in the first six months of this year. We also recovered \$14.4 million of losses on covered loans in the current six-month period, in contrast to providing \$9.1 million for such losses in the first six months of last year. In addition, we recorded no provisions for losses on non-covered loans in the current six-month period, as compared to \$10.0 million in the year-earlier six months.

Net Interest Income

Net interest income fell \$7.4 million year-over-year, to \$567.5 million, as an \$8.8 million decline in interest expense to \$265.6 million was exceeded by a \$16.2 million decline in interest income to \$833.2 million. In addition, our net interest margin declined to 2.69% in the current six-month period from 3.05% in the year-earlier six months. The following factors contributed to the year-over-year declines in net interest income and net interest margin:

The average balance of interest-earning assets rose \$4.5 billion year-over-year, to \$42.0 billion, as average loans rose \$1.8 billion to \$33.6 billion and average securities and money market investments rose \$2.7 billion to \$8.5 billion.

In the first six months of 2014, prepayment penalty income contributed \$39.6 million to the interest income on loans and 24 basis points to the average yield on such assets, down from \$64.3 million and 40 basis points in the year-earlier six months. Reflecting the decline in prepayment penalty income and the replenishment of the balance sheet with lower-yielding assets, the interest income on loans fell \$59.1 million year-over-year to \$696.1 million and the average yield on loans fell 60 basis points to 4.15%.

Prepayment penalty income contributed 19 basis points to the current six-month margin, as compared to 34 basis points in the first six months of 2013.

The average balance of interest-bearing liabilities rose \$4.0 billion year-over-year, to \$39.0 billion, as the average balance of borrowed funds rose \$2.5 billion to \$15.0 billion, and the average balance of interest-bearing deposits rose \$1.5 billion to \$24.0 billion.

The impact of the increase in the average balance of interest-bearing liabilities was exceeded by the benefit of a 21-basis point decline in the average cost of funds to 1.37%, as the average cost of borrowed funds fell 64 basis points year-over-year, to 2.64%, in the current six-month period and the average cost of interest-bearing deposits fell six basis points to 0.59% during this time.

Provisions for/(Recovery of) Loan Losses

Provision for Losses on Non-Covered Loans

No provisions for losses on non-covered loans were recorded in the current six-month period, as compared to \$10.0 million in the first six months of the prior year. Reflecting year-to-date net charge-offs of \$2.5 million, the allowance for losses on non-covered loans was \$139.5 million at June 30, 2014, as compared to \$141.9 million at December 31, 2013.

(Recovery of)/Provision for Losses on Covered Loans

We recovered \$14.4 million from the allowance for losses on covered loans in the current six-month period, in contrast to recording a provision of \$9.1 million for losses on covered loans in the first six months of last year. While the current six-month recovery was partly offset by FDIC indemnification expense of \$11.6 million, the year-earlier six-month provision was partly offset by FDIC indemnification income of \$7.3 million. FDIC indemnification expense and FDIC indemnification income are both recorded in Non-interest income.

For additional information about the provisions for loan losses recorded in the current and year-earlier six-month periods, please see Allowances for Loan Losses within the discussion of Critical Accounting Policies and Asset Quality within the Balance Sheet Summary.

Non-Interest Income

Non-interest income declined \$39.5 million year-over-year to \$89.8 million in the six months ended June 30, 2014. The reduction was primarily due to a \$19.4 million decline in mortgage banking income, as refinancing activity was constrained by the higher level of residential mortgage interest rates.

Table of Contents

Specifically, mortgage banking income contributed \$29.9 million to non-interest income in the current six-month period, as compared to \$49.3 million in the year-earlier six months. The year-over-year decline was the net effect of a \$34.3 million decrease in income from originations to \$8.7 million and a \$14.8 million increase in income from servicing to \$21.2 million.

As noted in the preceding line-item discussion, we also recorded FDIC indemnification expense of \$11.6 million in the current six-month period in contrast to FDIC indemnification income of \$7.3 million in the first six months of last year. In addition, net securities gains fell \$11.6 million year-over-year to \$5.1 million in the six months ended June 30, 2014.

The impact of these reductions was partly offset by a \$7.9 million rise in other income to \$30.5 million, primarily reflecting the \$6.0 million gain on the sale of OREO in the current second quarter and a \$4.6 million increase in the revenues produced by PBC. In the year-earlier six months, other income was increased by the recovery of \$4.3 million on securities that previously had been classified as other-than-temporarily impaired.

To a lesser extent, the impact of the decline in non-interest income was tempered by the \$3.9 million gain on the sale of Visa Class B shares recorded in the first quarter of this year.

The following table summarizes the sources and amounts of non-interest income for the six months ended June 30, 2014 and 2013:

Non-Interest Income Analysis

(in thousands)	For the Six Months Ended June 30,	
	2014	2013
Mortgage banking income	\$ 29,901	\$ 49,325
Fee income	18,324	18,733
BOLI	13,642	14,590
Net gain on sale of securities	5,135	16,745
FDIC indemnification (expense) income	(11,554)	7,296
Gain on Visa shares sold	3,856	--
Other income:		
Peter B. Cannell & Co., Inc.	12,418	7,819
Third-party investment product sales	7,189	7,976
Other	10,917	6,812
Total other income	30,524	22,607
Total non-interest income	\$ 89,828	\$129,296

Non-Interest Expense

In the first six months of 2014, we recorded non-interest expense of \$294.2 million, a \$13.6 million reduction from the year-earlier amount. The reduction was attributable to a \$9.4 million decline in operating expenses to \$289.8 million and a \$4.2 million decrease in CDI amortization to \$4.4 million.

The decline in operating expenses was driven by a \$10.3 million decrease in compensation and benefits expense to \$150.6 million, together with a \$1.7 million decline in G&A expense to \$88.8 million. The benefit of the combined declines was tempered by a \$2.6 million rise in occupancy and equipment expense to \$50.4 million.

In the first six months of 2013, compensation and benefits expense included retirement and severance charges of \$6.0 million; no comparable expense was recorded in the first six months of this year. The remainder of the decline in compensation and benefits expense largely reflects the benefit of various cost containment initiatives.

The decline in G&A expense was attributable to the improvement in the quality of our assets, which resulted in a reduction in the costs of managing and disposing of OREO. In addition, FDIC deposit insurance premiums fell \$1.5 million year-over-year, to \$27.3 million, in the first six months of 2014.

Income Tax Expense

Income tax expense rose \$7.5 million year-over-year, as previously noted, to \$143.8 million in the first six months of 2014. While pre-tax income rose a modest amount, to \$377.8 million, the effective tax rate rose to 38.07% in the current six-month period from 36.10% in the first six months of last year. The level of income tax expense was also increased by a one-time charge of \$4.5 million in the current year's first quarter, in connection with the enactment of certain New York State tax laws on March 31, 2014.

Table of Contents

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Quantitative and qualitative disclosures about the Company's market risk were presented on pages 91-96 of our 2013 Annual Report on Form 10-K, filed with the U.S. Securities and Exchange Commission (the "SEC") on February 28, 2014. Subsequent changes in the Company's market risk profile and interest rate sensitivity are detailed in the discussion entitled "Asset and Liability Management and the Management of Interest Rate Risk" earlier in this quarterly report.

ITEM 4. CONTROLS AND PROCEDURES

(a) Evaluation of Disclosure Controls and Procedures

As of the end of the period covered by this report, the Company carried out an evaluation, under the supervision and with the participation of the Company's management, including our Chief Executive Officer and Chief Financial Officer, of the effectiveness of the design and operation of the Company's disclosure controls and procedures pursuant to Rule 13a-15(b), as adopted by the Securities and Exchange Commission (the "SEC") under the Securities Exchange Act of 1934 (the "Exchange Act"). Based upon that evaluation, the Chief Executive Officer and Chief Financial Officer concluded that the Company's disclosure controls and procedures were effective as of the end of the period.

Disclosure controls and procedures are the controls and other procedures that are designed to ensure that information required to be disclosed in the reports that the Company files or submits under the Exchange Act is recorded, processed, summarized, and reported within the time periods specified in the SEC's rules and forms. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed in the reports that the Company files or submits under the Exchange Act is accumulated and communicated to management, including the Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure.

(b) Changes in Internal Control over Financial Reporting

There have not been any changes in the Company's internal control over financial reporting (as such term is defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) during the fiscal quarter to which this report relates that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

Table of Contents**PART II OTHER INFORMATION****Item 1. Legal Proceedings**

The Company is involved in various legal actions arising in the ordinary course of its business. All such actions, in the aggregate, involve amounts that are believed by management to be immaterial to the financial condition and results of operations of the Company.

Item 1A. Risk Factors

In addition to the other information set forth in this report, you should carefully consider the factors discussed in Part I, Item 1A. Risk Factors, in the Company's Annual Report on Form 10-K for the year ended December 31, 2013, as such factors could materially affect the Company's business, financial condition, or future results. There have been no material changes to the risk factors disclosed in the Company's 2013 Annual Report on Form 10-K. The risks described in the 2013 Annual Report on Form 10-K are not the only risks that the Company faces. Additional risks and uncertainties not currently known to the Company, or that the Company currently deems to be immaterial, also may have a material adverse impact on the Company's business, financial condition, or results of operations.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds***Shares Repurchased Pursuant to the Company's Stock-Based Incentive Plans***

Participants in the Company's stock-based incentive plans may have shares of common stock withheld to fulfill the income tax obligations that arise in connection with their exercise of stock options and the vesting of their stock awards. Shares that are withheld for this purpose are repurchased pursuant to the terms of the applicable stock-based incentive plan, rather than pursuant to the share repurchase program authorized by the Board of Directors, described below.

During the three months ended June 30, 2014, the Company allocated \$136,000 toward the repurchase of shares of its common stock pursuant to the terms of its stock-based incentive plans, as indicated in the following table:

(dollars in thousands, except per share data)

		Total Shares of Common		
		Stock	Average Price Paid	Total
Second Quarter 2014		Repurchased	per Common Share	Allocation
April 1	April 30	1,849	\$16.21	\$ 30
May 1	May 31	5,254	15.22	80
June 1	June 30	1,707	15.28	26
Total shares repurchased		8,810	15.43	\$136

Shares Repurchased Pursuant to the Board of Directors' Share Repurchase Authorization

On April 20, 2004, the Board of Directors authorized the repurchase of up to five million shares of the Company's common stock. Of this amount, 1,659,816 shares were still available for repurchase at June 30, 2014. Under said authorization, shares may be repurchased on the open market or in privately negotiated transactions. No shares have

been repurchased under this authorization since August 2006.

Shares that are repurchased pursuant to the Board of Directors' authorization, and those that are repurchased pursuant to the Company's stock-based incentive plans, are held in our Treasury account and may be used for various corporate purposes, including, but not limited to, merger transactions and the vesting of restricted stock awards.
