the Securities Exchange Act of 1934.

Yes No

If "Yes" is marked, indicated below the file number assigned to the
registrant in connection with Rule 12g3-2(b):

GOL Announces January 2010 Traffic Figures

São Paulo, February 5, 2010 – GOL Linhas Aéreas Inteligentes S.A. (BM&FBOVESPA: GOLL4 and NYSE: GOL), the largest low-cost and low-fare airline in Latin America, announces its preliminary traffic figures for January 2010.

Management Comments

In January, **demand on GOL's route network grew by 32.1%** over the same period last year (31.4% in the domestic market and 36.9% in the international market), the second consecutive month to record a year-on-year upturn.

The key factor behind the upturn was the improved economic scenario in Brazil and South America, especially in regard to consumer confidence, and GOL's strategic positioning in its operational markets, based on: (i) high flight frequency between main airports; (ii) high productivity; (iii) punctuality; (iv) exemplary customer service; (v) dynamic fare management, rewarding clients who schedule their trips in advance with lower fares, encouraging demand and reducing the number of available seats on flights where advanced booking is rare; (vi) a wide cost advantage; and (vii) the revitalization of SMILES, Latin America's largest mileage program, with more than 6.6 million participants and over 150 commercial partners.

Increase of 31.4% in domestic demand, driven by the favorable economic scenario and GOL's differentiated strategic positioning in its operational markets.

Specifically in regard to the international market, the increase in demand was also due to adjustments to the international route network, which now includes new routes from Brazil to Caribbean with flights to Aruba and Curaçao, the integration of GOL's and VRG's reservation systems in January 2009 and the repositioning of the sales channels in 2009, including the opening and renovation of airport stores abroad in order to adjust them to GOL's business model and the client profile of the location in question.

Demand grew by 8.5% over December 2009 (5.3% in the domestic market and 35.3% in the international market), due to the same factors that resulted in the year-on-year upturn. The international market growth drivers also included the 19.1% appreciation of the Real against the Dollar over January 2009, which was a key factor that contributed positively to this growth, and the new Caribbean routes, which reached their sales peak in January.

As a result, **the Company delivered a total load factor of 77.9% in January 2010** (77.3% in the domestic market and 81.8% in the international market), and the international market was **24.5 percentage points more than the 57.3%** recorded in January 2009, and **11.5 percentage points up on the 70.3% registered in December 2009.**

Operating Data	January 2010*	January 2009*	Ch. % (YoY)	December 2009*	Ch. % MoM
Total System					
ASK (mm) ⁽¹⁾	3,936.7	3,369.1	16.8%	3,702.9	6.3%
RPK (mm) ⁽²⁾	3,066.0	2,320.3	32.1%	2,827.0	8.5%

(*) January 2010 – preliminary figures; Figures from the National Civil Aviation Agency (Anac) for January 2009 and December 2009.

GOL has been maintaining its disciplined strategy of expanding capacity in order to maximize its operating result. In January 2010, the company increased its domestic capacity by 20.6%, while demand moved up by 31.4% . This strategy was clearly more effective in the international market, where GOL reduced its capacity by 4.1%, while demand climbed by 36.9% .

Yields maintained their gradual recovery pace, averaging more than R\$19.00 cents in January.

(1) Available seat kilometers (ASK) is the sum of the products obtained by multiplying the number of seats available on each flight stage by the distance of the average flight stage.

(2) Revenue passenger kilometers (RPK) is the sum of the products obtained by multiplying the number of revenue passengers carried on each flight stage by the average stage distance.

(3) Load factor is the percentage of aircraft seating capacity effectively used, which is calculated by dividing the number of passenger-kilometers flown by the number of seat-kilometers available.
