Notes

(i) EEV basis other income and expenditure represents the post-tax IFRS basis results for other operations (including Group and Asia Regional Head Office, holding company borrowings, Africa operations and Prudential Capital) less the unwind of expected margins on the internal management of the assets of the covered business (as explained in note

14(a)(vii)).

- (ii) Restructuring costs comprise the post-tax charge recognised on an IFRS basis and the additional amount recognised on an EEV basis for the shareholders' share incurred by the PAC with-profits fund. The costs are primarily incurred in UK and Europe and Asia and represent business transformation and integration costs.
- (iii) The comparative results have been prepared using previously reported average exchange rates for the year. The 2016 comparative results have been re-presented from those previously published following the reassessment of the Group's operating segments as described in note B1.3 of the IFRS financial statements. This approach has been adopted

consistently throughout this supplementary information.

^{*} Annualised return on embedded value is based on EEV post-tax operating profit after non-controlling interests, as a percentage of opening EEV basis shareholders' equity.

NOTES ON THE EEV BASIS RESULTS

1 Basis of preparation

The EEV basis results have been prepared in accordance with the EEV Principles dated April 2016, issued by the European Insurance CFO Forum. Where appropriate, the EEV basis results include the effects of adoption of EU-endorsed IFRS.

The directors are responsible for the preparation of the supplementary information in accordance with the EEV Principles. The auditors have reported on the 2017 EEV basis results supplement to the Company's statutory accounts for 2017. Their report was (i) unqualified and (ii) did not include a reference to any matters to which the auditors drew attention by way of emphasis without qualifying their report. Except for the reclassification of results to reflect the reassessment of the Group's operating segments as described in the note in B1.3 of the IFRS financial statements, the 2016 results have been derived from the EEV basis results supplement to the Company's statutory accounts for 2016. The supplement included an unqualified audit report from the auditors.

A detailed description of the EEV methodology and accounting presentation is provided in note 14.

2 Results analysis by business area

The 2016 comparative results are shown below on both actual exchange rates (AER) and constant exchange rates (CER) bases. The 2016 CER comparative results are translated at 2017 average exchange rates.

| US | 1,561 | 15,608 | 790 | 51 | 5.1 |
| UK and Europe | 1,160 | 10,513 | 268 | 23 | 2.5 |
| Total | 6,320 | 45,392 | 3,088 | 49 | 6.8 |

Note

After allowing for foreign exchange effects of £133 million, the new business contribution increased by £395 million on a CER basis. This increase is driven by higher sales volumes (a contribution of £188 million), a beneficial effect of changes in long-term interest rates (£48 million) and pricing, product mix and other actions of £159 million. The £159 million impact reflects the beneficial impact of our strategic emphasis on increasing sales from health and protection business in Asia, together with a positive £76 million effect arising in the US for the impact of US tax reform (see note 7).

| | 272 |
| Movement in effect of changes in operating | |
| assumptions, experience variances and other items | 375 |
| (including foreign exchange of £45 million) | |
| Net movement in operating profit from business in force | 647 |

(ii) Asia

2017 £m 2016 £m Unwind of discount and other 1,007 866 expected returnsnote (a) Effect of changes in operating 54 241 assumptionsnote (b) Experience variances 89 124 and other itemsnote (c) Total 1,337 1,044

Notes

- (a) The £141 million increase in unwind of discount and other expected returns to £1,007 million for 2017 is driven by the growth in the in-force book, with offsetting effects arising from foreign exchange (£38 million) and movements in long-term interest rates and changes in other economic assumptions (£(38) million).
- (b) The effect of changes in operating assumptions of £241 million reflects the net benefit for EEV arising from the annual review of experience, together with the benefit of management actions reflecting our ongoing focus on

managing the in-force book for value. It includes a £107 million benefit arising in China from adopting the principles for embedded value reporting under the China Risk Oriented Solvency System (C-ROSS) regime in 2017 (see note 14(a)(v)).

(c) The £89 million effect of experience variances and other items in 2017 is driven by positive mortality and morbidity experiences in a number of business units, together with positive persistency variances from participating and health and protection products, partially offset by unfavourable persistency variances on unit-linked products. Experience variances also include expense overruns where these are expected to be short-lived, including businesses that are growing rapidly or are sub-scale.

(iii) US

| | 347 | 428 |
| Total | 1,237 | 1,181 |

Notes

- (a) The £111 million increase in unwind of discount and other expected returns to £694 million for 2017 represents a positive £87 million effect for the growth in the in-force book (after allowing for the benefit of US tax reform) and a net £24 million effect for foreign exchange and interest rate movements.
- (b) The effect of assumption changes of £196 million in 2017 mainly relates to assumption updates for persistency, mortality and policyholder utilisation.
- (c) Other experience variances of £185 million in 2017 include the effects of positive mortality and persistency experience in the period, together with the benefit of tax credits relating to the dividend received deduction for variable annuity business.

(iv) UK and Europe

| | 2017 £m | 2016 £m |

| rate | | |
| Other | 13 | (05) |
| itemsnote (c) |)13 | (33) |

Total 673 375

Notes

- (a) The £20 million increase in unwind of discount and other expected returns to £465 million for 2017 is mainly driven by the underlying growth in the in-force book.
- (b) The £195 million relates to changes to annuitant mortality assumptions primarily reflecting the adoption of the Continuous Mortality Investigation 2015 model as the basis for future mortality improvements.
- (c) Other items comprise the following:

| | 2017 £m | 2016 £m |
|---|---------|---------|
| Longevity reinsurance | (6) | (90) |
| Impact of specific management actions to improve solvency position | 127 | 110 |
| Provision for cost of undertaking past non-advised annuity sales review and potential redressnote (d) | (187) | (145) |
| Other | 79 | 30 |
| | 13 | (95) |

(d) In response to the findings of the FCA's Thematic Review of Annuities Sales Practices, the UK business has agreed to review all internally vesting annuities sold without advice after 1 July 2008. The FCA formally released its redress calculation methodology in early 2018 and Prudential reassessed the provision held. Reflecting this, the UK 2017 result includes a £(187) million (post-tax) increase in the provision held for the estimated cost of the review and any appropriate customer redress. The provision held continues to exclude any potential for insurance recoveries. For more information, see note B3 of the IFRS financial statements.

5 Short-term fluctuations in investment returns

Short-term fluctuations in investment returns included in profit for the year arise as follows:

(i) Group summary

| | 2017 £m | 2016 £m |
|-----------------------------------|---------|---------|
| Asia operationsnote (ii) | 887 | (100) |
| US operationsnote (iii) | 582 | (1,102) |
| UK and Europe operationsnote (iv) | 621 | 876 |
| Other operations | 21 | (181) |
| Group total | 2,111 | (507) |

(ii) Asia operations

The short-term fluctuations in investment returns for Asia operations comprise:

| | 2017 £m | 2016 £m |
|-----------|---------|---------|
| Hong Kong | 531 | (105) |
| Singapore | 126 | 52 |
| Other | 230 | (47) |
| Total | 887 | (100) |

Note

For 2017, the credit of £887 million mainly reflects unrealised gains on bonds driven by the decrease in bond yields across many of the business units (see note 15(i)), together with higher equity returns than assumed for Hong Kong with-profits business and higher investment returns than assumed in Singapore for with-profits and unit-linked businesses.

(iii) US operations

The short-term fluctuations in investment returns for US operations comprise:

| | 2017 £m | 2016 £m |
|--|---------|---------|
| Investment return related experience on fixed income securities note (a) | (46) | (85) |
| Investment return related impact due to changed expectation of profits on in-force | | |
| variable annuity business in future periods based on current year | | |
| separate account return, net of related hedging activity and other itemsnote (b) | 628 | (1,017) |
| Total | 582 | (1,102) |

Notes

- (a) The net result relating to fixed income securities reflects a number of offsetting items as follows:
- the impact on portfolio yields of changes in the asset portfolio in the year;
- the difference between actual realised gains and losses and the amortisation of interest-related realised gains and losses that is recorded within operating profit; and
- credit experience (versus the longer-term assumption).
- (b) This item reflects the net impact of:
- changes in projected future fees and future benefit costs arising from the difference between the actual growth in separate account asset values of 17.5 per cent and that assumed of 5.9 per cent for the year (2016: actual growth of 8.9 per cent compared to assumed growth of 6.0 per cent); and
- related hedging activity arising from realised and unrealised gains and losses on equity-related hedges and interest rate options, and other items.

(iv) UK and Europe operations

The short-term fluctuations in investment returns for UK and Europe operations comprise:

| | 2017 £m | 2016 £m |
|---|---------|---------|
| Insurance operations: | | |
| Shareholder-backed annuity businessnote (a) | 387 | 431 |
| With-profits and other businessnote (b) | 229 | 438 |
| Asset management | 5 | 7 |
| Total | 621 | 876 |

Notes

- (a) Short-term fluctuations in investment returns for shareholder-backed annuity business include:
- gains on surplus assets compared to the expected long-term rate of return reflecting reductions in corporate bond and gilt yields; and
- the difference between actual and expected default experience.
- (b) The positive £229 million fluctuation in 2017 for with-profits and other business represents the impact of achieving a 9 per cent pre-tax return on the with-profits fund (including unallocated surplus) compared to the assumed rate of return of 5 per cent for the year (2016: achieved return of 14 per cent compared to assumed rate of 5 per cent), partially offset by the effect of a partial hedge of future shareholder transfers expected to emerge from the UK's with-profits sub-fund entered into to protect future shareholder with-profit transfers from movements in the UK equity market.

6 Effect of changes in economic assumptions

The effects of changes in economic assumptions for in-force business included in the profit for the year arise as follows:

(i) Group summary for long-term business operations

| | 2017 £m | 2016 £m |
|------------------------|---------|---------|
| Asianote (ii) | (95) | 70 |
| USnote (iii) | (136) | 45 |
| UK and Europenote (iv) | 129 | (175) |
| Group total | (102) | (60) |

(ii) Asia

The effect of changes in economic assumptions for Asia comprises:

| | 2017 £m | 2016 £m |
|-----------|---------|---------|
| Hong Kong | (321) | 85 |
| Indonesia | 81 | 46 |
| Malaysia | 59 | (20) |
| Singapore | 131 | (60) |
| Taiwan | (12) | 12 |
| Other | (33) | 7 |
| Total | (95) | 70 |

Note

The negative effect in 2017 of £(95) million largely arises from movements in long-term interest rates, driven by lower assumed fund earned rates in Hong Kong, partially offset by profits arising from the beneficial impact of valuing future profits at lower discount rates in Indonesia, Malaysia and Singapore (see note 15(i)). In addition, various changes to the basis of setting economic assumptions were made with an overall impact of £5 million (see note 14(a)(viii), note 15(i) and note 15(iv)).

(iii) US

The effect of changes in economic assumptions for US comprises:

| | 2017 £m | 2016 £m |
|--|---------|---------|
| Variable annuity business | (101) | 86 |
| Fixed annuity and other general account business | (35) | (41) |
| Total | (136) | 45 |

Note

For 2017, the charge of $\pounds(136)$ million mainly reflects the decrease in the assumed separate account return and reinvestment rates, following the 10 basis points decrease in the US 10-year treasury yield in the year, resulting in lower projected fee income and an increase in projected benefit costs for variable annuity business. For fixed annuity and other general account business, the impact reflects the effect on the present value of future projected spread income from the combined movement in interest rates and credit spreads.

(iv) UK and Europe

The effect of changes in economic assumptions for UK and Europe comprises:

| | 2017 £m | 2016 £m |
|-------------------------------------|---------|---------|
| Shareholder-backed annuity business | 28 | (113) |
| With-profits and other business | 101 | (62) |
| Total | 129 | (175) |

Note

The credit of £129 million mainly reflects the movement in expected long-term rates of return and risk discount rates as shown in note 15 (iii).

7 Impact of US tax reform

On 22 December 2017, a significant US tax reform package, The Tax Cuts and Jobs Act, was enacted into law effective from 1 January 2018. The tax reform package as a whole, which includes a reduction in the corporate income tax rate from 35 per cent to 21 per cent, and a number of specific measures affecting US life insurers, results in a £390 million benefit in non-operating profit. The positive impact on an EEV basis represents the benefit of future profits being taxed at a lower rate, partially offset by a reduction in the net deferred tax asset held in the balance sheet to reflect remeasurement at the new lower tax rate, together with a reduction in the benefit from the dividend received deduction on taxable profits from variable annuity business.

In accordance with our usual methodology, the new business contribution and unwind of discount and other expected returns are determined by applying operating and economic assumptions as at the end of the year, including the effect of US tax reform. This led to an increase in new business profit of £76 million.

8 Net core structural borrowings of shareholder-financed operations

| | 31 Dec 2017 £m | | | 31 Dec 2 | | |
|--|----------------|--|------------------------------------|---------------|--|------------------------------------|
| | IFRS basis | Mark to market value adjustment | EEV basis at market value | IFRS basis | Mark to market value adjustment | EEV basis at market value |
| Holding company (including central finance subsidiaries) | | | | | | |
| cash and short-term investments | (2,264) | - | (2,264) | (2,626) | - | (2,626) |
| Central funds | | | | | | |
| Subordinated debt | 5,272 | 515 | 5,787 | 5,772 | 182 | 5,954 |
| Senior debt | 549 | 167 | 716 | 549 | 175 | 724 |
| | 5,821 | 682 | 6,503 | 6,321 | 357 | 6,678 |
| Holding company net borrowings | 3,557 | 682 | 4,239 | 3,695 | 357 | 4,052 |
| Prudential Capital bank loan | 275 | - | 275 | 275 | - | 275 |
| Jackson surplus notes | 184 | 61 | 245 | 202 | 65 | 267 |
| Group total | 4,016 | 743 | 4,759 | 4,172 | 422 | 4,594 |

Note

In October 2017, the Company issued core structural borrowings of US\$750 million 4.875 per cent Tier 2 perpetual subordinated notes. The proceeds, net of costs, were £565 million. In December 2017, the Company repaid its US\$1,000 million 6.5 per cent Tier 2 perpetual subordinated notes. The movement in IFRS basis core structural borrowings from 2016 to 2017 also includes foreign exchange effects.

| EEV basis shareholders' equity | 18,855 | 12,009 | 12,165 | (4,061) | 38,968 |

Notes

- (i) Other operations of £(3,769) million represents the shareholders' equity of £(4,013) million as shown in the movement in shareholders' equity and includes goodwill of £244 million (2016: £245 million) related to Asia long-term operations.
- (ii) Intra-group dividends represent dividends that have been declared in the year and investment in operations reflect increases in share capital. The amounts included in note 11 for these items are as per the holding company cash flow at transaction rates. The difference primarily relates to intra-group loans, foreign exchange and other non-cash items.
- (iii) Other movements include reserve movements in respect of the shareholders' share of actuarial gains and losses on defined benefit pension schemes, share capital subscribed, share-based payments and treasury shares and intra-group transfers between operations which have no overall effect on the Group's embedded value.
- (iv) Group total EEV basis shareholders' equity can be further analysed as follows:

| 31 Dec 2017 £m | | | | 31 Dec 201 | 16 £m | | |
|-------------------------------------|---|------------------|----------------|--|---|------------------|----------------|

11 Analysis of movement in free surplus

For EEV covered business, free surplus is the excess of the regulatory basis net assets for EEV reporting purposes (net worth) over the capital required to support the covered business. Where appropriate, adjustments are made to the net worth so that backing assets are included at fair value rather than cost so as to comply with the EEV Principles. In Asia and US operations, assets deemed to be inadmissible on local regulatory basis are included in net worth where considered fully recognisable on an EEV basis. Free surplus for asset management operations and the UK general insurance commission is taken to be IFRS basis post-tax earnings and shareholders' equity, net of goodwill. Free surplus for other operations (including Group and Asia Regional Head Office, holding company borrowings, Africa

operations and Prudential Capital) is taken to be EEV basis post-tax earnings and shareholders' equity net of goodwill, with subordinated debt recorded as free surplus to the extent that it is classified as available capital under Solvency II.

Free surplus for insurance and asset management operations and Group total free surplus, including other operations, are shown in the tables below.

(i) Underlying free surplus generated - insurance and asset management operations
The 2016 comparative results are shown below on both actual exchange rates (AER) and constant exchange rates
(CER) bases. The 2016 CER comparative results are translated at 2017 average exchange rates.

Notes

- (a) Free surplus invested in new business primarily represents acquisition costs and amounts set aside for required capital.
- (b) Non-operating items include short-term fluctuations in investment returns and the effect of changes in economic assumptions for long-term business operations and the effect of business disposals. In addition, for 2017 this includes the impact of US tax reform.
- (c) Net cash flows to parent company for long-term business operations reflect the flows as included in the holding company cash flow at transaction rates.
- (d) Exchange rate movements, timing differences and other items represent:

12 Expected transfer of value of in-force business and required capital to free surplus

The discounted value of in-force business and required capital for long-term business operations can be reconciled to the 2017 and 2016 totals for the emergence of free surplus as follows:

| | 2017 £m | 2016 £m |
|---|---------|---------|
| Required capitalnote 10 | 10,265 | 10,296 |
| Value of in-force business (VIF)note 10 | 29,410 | 24,937 |
| Add back: deduction for cost of time value of guaranteesnote 10 | 836 | 998 |
| Free surplus generation from the sale of Korea life business | - | (76) |
| Other items* | (1,371) | (1,430) |
| Total long-term business operations | 39,140 | 34,725 |

* 'Other items' represent amounts incorporated into VIF where there is no definitive timeframe for when the payments will be made or receipts received. In particular, other items include the deduction of the shareholders' interest in the with-profits estate, the value of which is derived by increasing final bonus rates so as to exhaust the estate over the lifetime of the in-force with-profits business. This is an assumption to give an appropriate valuation. To be conservative this item is excluded from the expected free surplus generation profile below.

Cash flows are projected on a deterministic basis and are discounted at the appropriate risk discount rate. The modelled cash flows use the same methodology underpinning the Group's EEV reporting and so are subject to the same assumptions and sensitivities.

The table below shows how the VIF generated by the in-force business and the associated required capital for long-term business operations is modelled as emerging into free surplus over future years.

| | | 2017 £m Expected period of conversion of future post-tax distributable earn and required capital flows to free surplus | | | | | | | |

13 Sensitivity of results to alternative assumptions

(a) Sensitivity analysis - economic assumptions

The tables below show the sensitivity of the embedded value as at 31 December 2017 and 31 December 2016 and the new business contribution after the effect of required capital for 2017 and 2016 for long-term business operations to:

- 1 per cent increase in the discount rates;
- 1 per cent increase in interest rates and risk discount rates, including consequential changes (assumed investment returns for all asset classes, market values of fixed interest assets);
- 0.5 per cent decrease in interest rates and risk discount rates, including consequential changes (assumed investment returns for all asset classes, market values of fixed interest assets);
- 1 per cent rise in equity and property yields;
- 10 per cent fall in market value of equity and property assets (embedded value only);
- The statutory minimum capital level in contrast to EEV basis required capital (for embedded value only); and

- 5 basis points increase in UK long-term expected defaults.

In each sensitivity calculation, all other assumptions remain unchanged except where they are directly affected by the revised economic conditions.

| Equity/property market values - 10% fall | (429) | (209) | (479) | (1,117) | (361) | (11) | (399) | (771) |
| Statutory minimum capital | 169 | 158 | - | 327 | 150 | 223 | - | 373 |
| Long-term expected defaults - 5 bps increase | - | - | (135) | (135) | - | - | (138) | (138) |

The sensitivities shown above are for the impact of instantaneous changes on the embedded value of long-term business operations and include the combined effect on the value of in-force business and net assets at the balance sheet dates indicated. If the change in assumptions shown in the sensitivities were to occur, then the effect shown above would be recorded within two components of the profit analysis for the following year, namely the effect of economic assumption changes and short-term fluctuations in investment returns. In addition to the sensitivity effects shown above, the other components of the profit for the following year would be calculated by reference to the altered assumptions, for example new business contribution and unwind of discount, together with the effect of other changes such as altered corporate bond spreads. In addition for changes in interest rates, the effect shown above for Jackson would also be recorded within the fair value movements on assets backing surplus and required capital, which are taken directly to shareholders' equity.

(b) Sensitivity analysis - non-economic assumptions

The tables below show the sensitivity of the embedded value as at 31 December 2017 and 31 December 2016 and the new business contribution after the effect of required capital for 2017 and 2016 for long-term business operations to:

- 10 per cent proportionate decrease in maintenance expenses (a 10 per cent sensitivity on a base assumption of £10 per annum would represent an expense assumption of £9 per annum);
- 10 per cent proportionate decrease in lapse rates (a 10 per cent sensitivity on a base assumption of 5 per cent would represent a lapse rate of 4.5 per cent per annum); and
- 5 per cent proportionate decrease in base mortality and morbidity rates (ie increased longevity).

14 Methodology and accounting presentation

(a) Methodology

Overview

The embedded value is the present value of the shareholders' interest in the earnings distributable from assets allocated to covered business after sufficient allowance has been made for the aggregate risks in that business. The shareholders' interest in the Group's long-term business comprises:

- the present value of future shareholder cash flows from in-force covered business (value of in-force business), less deductions for:
- the cost of locked-in required capital; and
- the time value of cost of options and guarantees;
- locked-in required capital; and
- the shareholders' net worth in excess of required capital (free surplus).

The value of future new business is excluded from the embedded value.

Notwithstanding the basis of presentation of results as explained in note 14(b)(iii), no smoothing of market or account balance values, unrealised gains or investment return is applied in determining the embedded value or profit. Separately, the analysis of profit is delineated between operating profit based on longer-term investment returns and other constituent items, as explained in note 14(b)(i).

(i) Covered business

The EEV results for the Group are prepared for 'covered business', as defined by the EEV Principles. Covered business represents the Group's long-term insurance business, including the Group's investments in joint venture and associate insurance operations, for which the value of new and in-force contracts is attributable to shareholders. The post-tax EEV basis results for the Group's covered business are then combined with the post-tax IFRS basis results of the Group's asset management and other operations (including Group and Asia Regional Head Office, holding company borrowings, Africa operations and Prudential Capital). Under the EEV Principles, the results for covered business incorporate the projected margins of attaching internal asset management, as described in note 14(a)(vii).

The definition of long-term business operations comprises those contracts falling under the definition for regulatory purposes together with, for US operations, contracts that are in substance the same as guaranteed investment contracts (GICs) but do not fall within the technical definition.

Covered business comprises the Group's long-term business operations, with two exceptions:

- the closed Scottish Amicable Insurance Fund (SAIF) which is excluded from covered business. SAIF is a ring-fenced sub-fund of The Prudential Assurance Company Limited (PAC) long-term fund, established by a Court Approved Scheme of Arrangement in October 1997. SAIF is closed to new business and the assets and liabilities of the fund are wholly attributable to the policyholders of the fund.
- the presentational treatment of the Group's principal defined benefit pension scheme, the Prudential Staff Pension Scheme (PSPS). The partial recognition of the surplus for PSPS is recognised in 'Other' operations.

A small amount of UK group pensions business is also not modelled for EEV reporting purposes.

(ii) Valuation of in-force and new business

The embedded value results are prepared incorporating best estimate assumptions about all relevant factors including levels of future investment returns, expenses, persistency, mortality and morbidity, as described in note 15(vii). These

assumptions are used to project future cash flows. The present value of the future cash flows is then calculated using a discount rate which reflects both the time value of money and the non-diversifiable risks associated with the cash flows that are not otherwise allowed for.

New business

In determining the EEV basis value of new business, premiums are included in projected cash flows on the same basis of

distinguishing annual and single premium business as set out for statutory basis reporting.

New business premiums reflect those premiums attaching to covered business, including premiums for contracts classified as

investment products for IFRS basis reporting. New business premiums for regular premium products are shown on an annualised basis. Internal vesting business is classified as new business where the contracts include an open market option.

The post-tax contribution from new business represents profits determined by applying operating and economic assumptions as at the end of the year. New business profitability is a key metric for the Group's management of the development of the business. In addition, post-tax new business margins are shown by reference to annual premium equivalents (APE) and the present value of new business premiums (PVNBP). These margins are calculated as the percentage of the value of new business profit to APE and PVNBP. APE is calculated as the aggregate of regular premiums and one-tenth of single premiums. PVNBP is calculated as equalling single premiums plus the present value of expected premiums of regular premium new business, allowing for lapses and other assumptions made in determining the EEV new business contribution.

Valuation movements on investments

With the exception of debt securities held by Jackson, investment gains and losses during the year (to the extent that changes in capital values do not directly match changes in liabilities) are included directly in the profit for the year and shareholders' equity as they arise.

The results for any covered business conceptually reflect the aggregate of the IFRS results and the movements on the additional shareholders' interest recognised on the EEV basis. Thus the start point for the calculation of the EEV results for Jackson, as for other businesses, reflects the market value movements recognised on an IFRS basis.

However, in determining the movements on the additional shareholders' interest, the basis for calculating the EEV result for Jackson acknowledges that, for debt securities backing liabilities, the aggregate EEV results reflect the fact that the value of in-force business instead incorporates the discounted value of future spread earnings. This value is not affected generally by short-term market movements on securities that, broadly speaking, are held for the longer term.

Fixed income securities backing the free surplus and required capital for Jackson are accounted for at fair value. However, consistent with the treatment applied under IFRS for Jackson securities classified as available-for-sale, movements in unrealised appreciation/depreciation on these securities are accounted for in equity rather than in the income statement, as shown in the movement in shareholders' equity.

(iii) Cost of capital

A charge is deducted from the embedded value for the cost of locked-in required capital supporting the Group's long-term business. The cost is the difference between the nominal value of the capital and the discounted value of the projected releases of this capital, allowing for post-tax investment earnings on the capital.

The annual result is affected by the movement in this cost from year to year which comprises a charge against new business profit and generally a release in respect of the reduction in capital requirements for business in force as this

runs off.

Where required capital is held within a with-profits long-term fund, the value placed on surplus assets in the fund is already discounted to reflect its release over time and no further adjustment is necessary in respect of required capital.

(iv) Financial options and guarantees

Nature of financial options and guarantees in Prudential's long-term business

Asia

Subject to local market circumstances and regulatory requirements, the guarantee features described below in respect of UK and Europe business broadly apply to similar types of participating contracts which are principally written in Hong Kong, Singapore and Malaysia. Participating products have both guaranteed and non-guaranteed elements.

There are also various non-participating long-term products with guarantees. The principal guarantees are those for whole-of-life contracts with floor levels of policyholder benefits that accrue at rates set at inception and do not vary subsequently with market conditions.

US (Jackson)

The principal financial options and guarantees in Jackson are associated with the fixed annuity (FA) and variable annuity (VA) lines of business.

Fixed annuities provide that, at Jackson's discretion, it may reset the interest rate credited to policyholders' accounts, subject to a guaranteed minimum. The guaranteed minimum return varies from 1.0 per cent to 5.5 per cent for both years, depending on the particular product, jurisdiction where issued, and date of issue. For both years, 87 per cent of the account values on fixed annuities are for policies with guarantees of 3 per cent or less, and the average guarantee rate is 2.6 per cent.

Fixed annuities also present a risk that policyholders will exercise their option to surrender their contracts in periods of rapidly rising interest rates, possibly requiring Jackson to liquidate assets at an inopportune time.

Jackson issues VA contracts for which it contractually guarantees to the contract holder, subject to specific conditions, either: a) return of no less than total deposits made to the contract adjusted for any partial withdrawals; b) total deposits made to the contract adjusted for any partial withdrawals plus a minimum return; or c) the highest contract value on a specified anniversary date adjusted for any withdrawals following the specified contract anniversary. These guarantees include benefits that are payable upon depletion of funds (Guaranteed Minimum Withdrawal Benefit (GMWB)), as death benefits (Guaranteed Minimum Death Benefits (GMDB)) or as income benefits (Guaranteed Minimum Income Benefits (GMIB)). These guarantees generally protect the policyholders' value in the event of poor equity market performance. Jackson hedges the GMWB and GMDB guarantees through the use of equity options and futures contracts, and essentially fully reinsures the GMIB guarantees.

Jackson also issues fixed index annuities (FIA) that enable policyholders to obtain a portion of an equity-linked return while providing a guaranteed minimum return. The guaranteed minimum returns are of a similar nature to those described above for fixed annuities.

UK and Europe (M&G Prudential)

For covered business the only significant financial options and guarantees in M&G Prudential arise in the with-profits fund.

With-profits products provide returns to policyholders through bonuses that are smoothed. There are two types of bonuses - annual and final. Annual bonuses are declared once a year and, once credited, are guaranteed in accordance with the terms of the particular product. Unlike annual bonuses, final bonuses are guaranteed only until the next bonus

declaration. The PAC with-profits fund also held a provision of £53 million at 31 December 2017 (31 December 2016: £62 million) to honour guarantees on a small number of guaranteed annuity option products.

The Group's main exposure to guaranteed annuity options in M&G Prudential is through the non-covered business of SAIF. A provision of £503 million was held in SAIF at 31 December 2017 (31 December 2016: £571 million) to honour the guarantees. As described in note 14(a)(i), the assets and liabilities are wholly attributable to the policyholders of the fund. Therefore the movement in the provision has no direct impact on shareholders' funds.

Time value

The value of financial options and guarantees comprises two parts:

- The first part arises from a deterministic valuation on best estimate assumptions (the intrinsic value).
- The second part arises from the variability of economic outcomes in the future (the time value).

Where appropriate, a full stochastic valuation has been undertaken to determine the time value of the financial options and guarantees.

The economic assumptions used for the stochastic calculations are consistent with those used for the deterministic calculations. Assumptions specific to the stochastic calculations reflect local market conditions and are based on a combination of actual market data, historic market data and an assessment of long-term economic conditions. Common principles have been adopted across the Group for the stochastic asset models, for example, separate modelling of individual asset classes but with an allowance for correlation between the various asset classes. Details of the key characteristics of each model are given in notes 15(iv), (v) and (vi).

In deriving the time value of financial options and guarantees, management actions in response to emerging investment and fund solvency conditions have been modelled. Management actions encompass, but are not confined to, investment allocation decisions, levels of reversionary and terminal bonuses and credited rates. Bonus rates are projected from current levels and varied in accordance with assumed management actions applying in the emerging investment and fund solvency conditions.

In all instances, the modelled actions are in accordance with approved local practice and therefore reflect the options actually available to management. For the PAC with-profits fund, the actions assumed are consistent with those set out in the Principles and Practices of Financial Management which explains how regular and final bonus rates within the discretionary framework are determined, subject to the general legislative requirements applicable.

(v) Level of required capital

In adopting the EEV Principles, Prudential has based required capital on its internal targets, subject to it being at least the local statutory minimum requirements.

For with-profits business written in a segregated life fund, as is the case in Asia and the UK, the capital available in the fund is sufficient to meet the required capital requirements. For M&G Prudential, a portion of future shareholder transfers expected from the with-profits fund is recognised within net worth, together with the associated capital requirements.

For shareholder-backed business, the following capital requirements for long-term business operations apply:

- Asia: the level of required capital has been set to an amount at least equal to the higher of local statutory requirements and the internal target. For China operations, the level of required capital as at 31 December 2017 follows the approach for embedded value reporting issued by the China Association of Actuaries (CAA), reflecting the C-ROSS regime;
- US: the level of required capital has been set at 250 per cent of the risk-based capital (RBC) required by the National Association of Insurance Commissioners (NAIC) at the Company Action Level (CAL); and

- UK and Europe: the capital requirements are set at the Solvency II Solvency Capital Requirement (SCR) for shareholder-backed business as a whole.

(vi) With-profits business and the treatment of the estate

The proportion of surplus allocated to shareholders from the PAC with-profits fund has been based on the present level of 10 per cent. The value attributed to the shareholders' interest in the estate is derived by increasing final bonus rates (and related shareholder transfers) so as to exhaust the estate over the lifetime of the in-force with-profits business. In any scenarios where the total assets of the life fund are insufficient to meet policyholder claims in full, the excess cost is fully attributed to shareholders. Similar principles apply, where appropriate, for other with-profits funds of the Group's Asia operations.

(vii) Internal asset management

The in-force and new business results from long-term business include the projected value of profits or losses from asset management and service companies that support the Group's covered insurance businesses. The results of the Group's asset management operations include the current year profits from the management of both internal and external funds. EEV basis shareholders' other income and expenditure is adjusted to deduct the unwind of the expected internal asset management profit margin for the year as included in 'Other operations'. The deduction is on a basis consistent with that used for projecting the results for covered insurance business. Group operating profit accordingly includes the variance between actual and expected profit in respect of management of the assets for covered business.

(viii) Allowance for risk and risk discount rates

Overview

Under the EEV Principles, discount rates used to determine the present value of future cash flows are set by reference to risk-free rates plus a risk margin.

For Asia and the US, the risk-free rates are based on 10-year local government bond yields.

For UK and Europe, the EEV risk-free rate is based on the full term structure of interest rates, ie a yield curve, which is used to determine the embedded value at the end of the reporting period.

The risk margin should reflect any non-diversifiable risk associated with the emergence of distributable earnings that is not allowed for elsewhere in the valuation. In order to better reflect differences in relative market risk volatility inherent in each product group, Prudential sets the risk discount rates to reflect the expected volatility associated with the cash flows for each product category in the embedded value model, rather than at a Group level.

Since financial options and guarantees are explicitly valued under the EEV methodology, risk discount rates under EEV are set excluding the effect of these product features.

The risk margin represents the aggregate of the allowance for market risk, additional allowance for credit risk where appropriate, and allowance for non-diversifiable non-market risk. No allowance is required for non-market risks where these are assumed to be fully diversifiable.

Market risk allowance

The allowance for market risk represents the beta multiplied by an equity risk premium. Except for UK shareholder-backed annuity business (as explained below), such an approach has been used for the Group's businesses.

The beta of a portfolio or product measures its relative market risk. The risk discount rates reflect the market risk inherent in each product group and hence the volatility of product cash flows. These are determined by considering how the profits from each product are affected by changes in expected returns on various asset classes. By converting

this into a relative rate of return, it is possible to derive a product-specific beta.

Product level betas reflect the most recent product mix to produce appropriate betas and risk discount rates for each major product grouping.

Additional credit risk allowance

The Group's methodology is to allow appropriately for credit risk. The allowance for total credit risk is to cover:

- expected long-term defaults;
- credit risk premium (to reflect the volatility in downgrade and default levels); and
- short-term downgrades and defaults.

These allowances are initially reflected in determining best estimate returns and through the market risk allowance described above. However, for those businesses largely backed by holdings of debt securities these allowances in the projected returns and market risk allowances may not be sufficient and an additional allowance may be appropriate.

The practical application of the allowance for credit risk varies depending upon the type of business as described below:

Asia

For Asia, the allowance for credit risk incorporated in the projected rates of return and the market risk allowance are sufficient. Accordingly, no additional allowance for credit risk is required.

The projected rates of return for holdings of corporate bonds comprise the risk-free rate plus an assessment of long-term spread over the risk-free rate.

US (Jackson)

For Jackson business, the allowance for long-term defaults is reflected in the risk margin reserve (RMR) charge which is deducted in determining the projected spread margin between the earned rate on the investments and the policyholder crediting rate.

The risk discount rate incorporates an additional allowance for credit risk premium and short-term downgrades and defaults (0.2 per cent for variable annuity business and 1.0 per cent for non-variable annuity business for both years), as shown in note 15(ii). In determining this allowance a number of factors have been considered. These factors, in particular, include:

- How much of the credit spread on debt securities represents an increased short-term credit risk not reflected in the RMR long-term default assumptions, and how much is liquidity premium (which is the premium required by investors to compensate for the risk of longer-term investments which cannot be easily converted into cash, and converted at the fair market value). In assessing this effect, consideration has been given to a number of approaches to estimating the liquidity premium by considering recent statistical data; and
- Policyholder benefits for Jackson fixed annuity business are not fixed. It is possible in adverse economic scenarios to pass on a component of credit losses to policyholders (subject to guarantee features) through lower investment returns credited to policyholders. Consequently, it is only necessary to allow for the balance of the credit risk in the risk discount rate.

The level of the additional allowance is assessed at each reporting period to take account of prevailing credit conditions and as the business in force alters over time. The additional allowance for variable annuity business has been set at one-fifth of the non-variable annuity business to reflect the proportion of the allocated holdings of general account debt securities.

The level of allowance differs from that for UK annuity business for investment portfolio differences and to take account of the management actions available in adverse economic scenarios to reduce crediting rates to policyholders,

subject to guarantee features of the products.

UK and Europe (M&G Prudential)

(1) Shareholder-backed annuity business

For shareholder-backed annuity business, Prudential has used a market consistent embedded value (MCEV) approach to derive an implied risk discount rate which is then applied to the projected best estimate cash flows.

In the annuity MCEV calculations, as the assets are generally held to maturity to match liabilities, the future cash flows are discounted using the swap yield curve plus an allowance for liquidity premium based on the Solvency II allowance for credit risk. The Solvency II allowance is set by European Insurance and Occupational Pensions Authority (EIOPA) using a prudent assumption that all future downgrades will be replaced annually, and allowing for the credit spread floor.

For the purposes of presentation in the EEV results, the results on this basis are reconfigured. Under this approach the projected earned rate of return on the debt securities held is determined after allowing for a best estimate credit risk allowance. The remaining elements of prudence within the Solvency II allowance are incorporated into the risk margin included in the discount rate, shown in note 15(iii).

(2) With-profits fund non-profit annuity business

For non-profit annuity business attributable to the PAC with-profits fund, the basis for determining the aggregate allowance for credit risk is consistent with that applied for UK shareholder-backed annuity business (as described above). The allowance for credit risk for this business is taken into account in determining the projected cash flows from the with-profits fund, which are in turn discounted at the risk discount rate applicable to all of the projected cash flows from the fund.

(3) With-profits fund holdings of debt securities

The with-profits fund holds debt securities as part of its investment portfolio backing policyholder liabilities and unallocated surplus. The assumed earned rate for with-profit holdings of corporate bonds is defined as the risk-free rate plus an assessment of the long-term spread over risk free, net of expected long-term defaults. This approach is similar to that applied for equities and properties for which the projected earned rate is defined as the risk-free rate plus a long-term risk premium.

Allowance for non-diversifiable non-market risks

The majority of non-market and non-credit risks are considered to be diversifiable. An allowance for non-diversifiable non-market risks is estimated as set out below:

A base level allowance of 50 basis points is applied to cover the non-diversifiable non-market risks associated with the Group's businesses. For the Group's Asia operations in China, Indonesia, the Philippines, Taiwan, Thailand and Vietnam, additional allowances are applied for emerging market risk ranging from 100 to 250 basis points. The level of these allowances are reviewed and updated based on an assessment of a range of pre-defined emerging market risk indicators, as well as the Group's exposure and experience in the business units. During 2017, the China allowance for non-market risk was reduced reflecting the growth in the size of the business, increasing management exposure and experience in the country and an improvement in our risk assessment of the market. For the Group's US business and UK and Europe business, no additional allowance is necessary.

(ix) Foreign currency translation

Foreign currency profits and losses have been translated at average exchange rates for the year. Foreign currency assets and liabilities have been translated at year-end exchange rates. The principal exchange rates are shown in note A1 of the IFRS financial statements.

(x) Taxation

In determining the post-tax profit for the year for covered business, the overall tax rate includes the impact of tax effects determined on a local regulatory basis. Tax payments and receipts included in the projected cash flows to determine the value of in-force business are calculated using rates that have been announced and substantively enacted by the end of the reporting period.

(xi) Inter-company arrangements

The EEV results for covered business incorporate annuities established in the PAC non-profit sub-fund from vesting pension policies in SAIF (which is not covered business). The EEV results also incorporate the effect of the reinsurance arrangement of non-profit immediate pension annuity liabilities of SAIF to the PAC non-profit sub-fund.

(b) Accounting presentation

(i) Analysis of post-tax profit

To the extent applicable, the presentation of the EEV post-tax profit for the year is consistent in the classification between operating and non-operating results with the basis that the Group applies for the analysis of IFRS basis results. Operating results reflect underlying results including longer-term investment returns (which are determined as described in note 14(b)(ii)) and incorporate the following:

- new business contribution, as defined in note 14(a)(ii);
- unwind of discount on the value of in-force business and other expected returns, as described in note 14(b)(iii);
- the impact of routine changes of estimates relating to operating assumptions, as described in note 14(b)(iv); and
- operating experience variances, as described in note 14(b)(v).

Non-operating results comprise the recurrent items of:

- short-term fluctuations in investment returns;
- the mark to market value movements on core structural borrowings; and
- the effect of changes in economic assumptions.

In addition, non-operating results include the effect of the disposal of businesses (see note 17) and in 2017, the impact of US tax reform (see note 7).

Total profit attributable to shareholders and basic earnings per share include these items, together with actual investment returns. The Group believes that operating profit, as adjusted for these items, better reflects underlying performance.

(ii) Investment returns included in operating profit

For the investment element of the assets covering the net worth of long-term insurance business, investment returns are recognised in operating results at the expected long-term rate of return. These expected returns are calculated by reference to the asset mix of the portfolio. For the purpose of calculating the longer-term investment return to be included in the operating result of the PAC with-profits fund of M&G Prudential, where assets backing the liabilities and unallocated surplus are subject to market volatility, asset values at the beginning of the reporting period are adjusted to remove the effects of short-term market movements as explained in note 14(b)(iii).

For the purpose of determining the long-term returns for debt securities of US operations for fixed annuity and other general account business, a risk margin reserve charge is included which reflects the expected long-term rate of default based on the credit quality of the portfolio. For Jackson, interest-related realised gains and losses are amortised to the operating results over the maturity period of the sold bonds and for equity-related investments, a long-term rate of return is assumed, which reflects the aggregation of end-of-period risk-free rates and equity risk premium. For US variable annuity separate account business, operating profit includes the unwind of discount on the opening value of in-force business adjusted to reflect end-of-period projected rates of return with the excess or deficit of the actual return recognised within non-operating profit, together with related hedging activity.

For UK annuity business, rebalancing of the asset portfolio backing the liabilities to policyholders may, from time to time, take place to align it more closely with the internal benchmark of credit quality that management applies. Such rebalancing will result in a change in the projected yield on the asset portfolio and the allowance for default risk. The net effect of these changes is included in the operating result for the year.

(iii) Unwind of discount and other expected returns

The Group's methodology in determining the unwind of discount and other expected returns is by reference to:

- the value of in-force business at the beginning of the year (adjusted for the effect of current year economic and operating assumption changes); and
- required capital and surplus assets.

In applying this general approach, the unwind of discount included in operating profit for M&G Prudential is described below.

M&G Prudential

The unwind is determined by reference to an implied single risk discount rate. The EEV risk-free rate is based on a yield curve (as set out in note 14(a)(viii)), which is used to derive a single implied discount rate which, if this rate had been used, would reproduce the same embedded value as that calculated by reference to the yield curve. The difference between the operating profit determined using the single implied discount rate and that derived using the yield curve is included within non-operating profit.

For with-profits business, the opening value of in-force is adjusted for the effect of short-term investment volatility due to market movements (ie smoothed). In the summary statement of financial position and for total profit reporting, asset values and investment returns are not smoothed. At 31 December 2017 the shareholders' interest in the smoothed surplus assets used for this purpose only were £57 million lower (31 December 2016: £77 million lower) than the surplus assets carried in the statement of financial position.

(iv) Effect of changes in operating assumptions

Operating profit includes the effect of changes to non-economic assumptions on the value of in-force at the end of the year. For presentational purposes the effect of changes is delineated to show the effect on the opening value of in-force as operating assumption changes, with the experience variances subsequently being determined by reference to the end-of-year assumptions (see note 14(b)(v)).

(v) Operating experience variances

Operating profit includes the effect of experience variances on non-economic assumptions, such as persistency, mortality and morbidity, expenses and other factors, which are calculated with reference to the end-of-year assumptions.

(vi) Effect of changes in economic assumptions

Movements in the value of in-force business at the beginning of the year caused by changes in economic assumptions, net of the related change in the time value of cost of options and guarantees, are recorded in non-operating results. For M&G Prudential, the embedded value incorporates Solvency II transitional measures, which are recalculated using management's estimate of the impact of operating and market conditions at the valuation date. The effect of changes in economic assumptions is after allowing for this recalculation.

15 Assumptions

Principal economic assumptions

The EEV basis results for the Group's operations have been determined using economic assumptions where the long-term expected rates of return on investments and risk discount rates are set by reference to year-end risk-free

rates of return (defined below for each of the Group's insurance operations). Expected returns on equity and property asset classes and corporate bonds are derived by adding a risk premium, based on the Group's long-term view, to the risk-free rate.

The total profit that emerges over the lifetime of an individual contract as calculated using the embedded value basis is the same over time as that calculated under the IFRS basis. Since the embedded value basis reflects discounted future cash flows, under this methodology the profit emergence is advanced, thus more closely aligning the timing of the recognition of profit with the efforts and risks of current management actions, particularly with regard to business sold during the year.

(i) Asianotes (b)(c)

The risk-free rates of return for Asia are defined as 10-year government bond yields at the end of the year.

In order to reflect Prudential's most recent assessment of the growth prospects of the region compared to other developed markets and the historically strong relationship between long-term economic growth and long-term equity returns, in a number of Asia business units, equity risk premiums were increased during 2017 by between 25 basis points and 75 basis points from those applied at 2016. The related expected return on equity and risk discount rates have also been increased by equivalent amounts. In addition, for a few Asia business units, expected long-term inflation assumptions were revised during 2017 to better reflect central bank inflation targets and to align with the currency of the underlying exposures.

| | Risk dis | scount rate | e % | | 10-year | | Expected | |

| Vietnam | 12.6 | 13.0 | 12.6 | 13.0 | 5.1 | 6.3 | 5.5 | 5.5 |
| Total weighted risk discount ratenote (a) | 5.3 | 5.3 | 5.7 | 6.1 | | | | |

Notes

- (a) The weighted risk discount rates for Asia operations shown above have been determined by weighting each market's risk discount rates by reference to the post-tax EEV basis new business contribution and the closing value of in-force business. The changes in the risk discount rates for individual Asia business units reflect:
- the movements in 10-year government bond yields;
- changes in product mix; and
- the effect of changes in the economic basis (see note 14(a)(viii) and above).
- (b) For Hong Kong the assumptions shown are for US dollar denominated business. For other business units, the assumptions are for local currency denominated business.
- (c) Equity risk premiums in Asia range from 4.0 per cent to 9.4 per cent (2016: from 3.5 per cent to 8.7 per cent).
- (d) The mean equity return assumptions for the most significant equity holdings of the Asia operations are:

31 Dec 2017 % 31 Dec 2016 %

 Hong Kong
 6.4
 6.5

 Malaysia
 10.4
 10.2

 Singapore
 8.5
 8.5

(ii) US

The risk-free rates of return for the US are defined as 10-year treasury bond yield at the end of the year.

^{*} Including the proportion of variable annuity business invested in the general account and fixed index annuity business, the assumed spread margin grades up linearly by 25 basis points to a long-term assumption over five years.

(iii) UK and Europe

The risk-free rate is based on the full term structure of interest rates, ie a yield curve, which is used to determine the embedded value at the end of the reporting period. These yield curves are used to derive pre-tax expected long-term nominal rates of investment return and risk discount rates. For the purpose of determining the unwind of discount in the analysis of operating profit, these yield curves are used to derive a single implied risk discount rate, as explained in note 14(a)(viii).

This single implied risk discount rate is shown, along with the 15-year nominal rate of investment return and 15-year rate of inflation based on the yield curve.

[†] Including the proportion of variable annuity business invested in the general account.

Notes

- (a) For shareholder-backed annuity business, the movements in the pre-tax long-term nominal rates of return and risk discount rates reflect the effect of changes in asset yields.
- (b) The risk discount rates for with-profits and other business shown above represents a weighted average total of the rates applied to determine the present value of future cash flows, including a portion of future with-profits business shareholders' transfers recognised in net worth.
- (c) The table below shows the pattern of the UK risk-free Solvency II spot yield curve at the end of both years:

| | 1 year | 5 year | 10 year | 15 year | 20 |
|-------------|--------|--------|---------|---------|------|
| 31 Dec 2017 | | | | | - |
| 31 Dec 2016 | 0.4% | 0.7% | 1 1% | 1.3% | 1 3% |

Stochastic assumptions

Details are given below of the key characteristics of the models used to determine the time value of the financial options and guarantees as referred to in note 14(a)(iv).

(iv) Asia

- The stochastic cost of guarantees is primarily of significance for the Hong Kong, Malaysia, Singapore and Taiwan operations;
- The principal asset classes are government and corporate bonds;
- The asset return models are similar to the models as described for M&G Prudential below; and
- The volatility of equity returns ranges from 18 per cent to 35 per cent, and the volatility of government bond yields ranges from 1.1 per cent to 2.0 per cent (2016: from 0.9 per cent to 2.3 per cent) following a number of modelling

changes at full year 2017 in respect of future bond returns.

(v) US (Jackson)

- Interest rates and equity returns are projected using a log-normal generator reflecting historical market data;
- Corporate bond returns are based on treasury yields plus a spread that reflects current market conditions; and
- The volatility of equity returns ranges from 18 per cent to 27 per cent for both years, and the standard deviation of interest rates ranges from 2.5 per cent to 2.8 per cent (2016: from 2.3 per cent to 2.6 per cent).

(vi) UK and Europe (M&G Prudential)

- Interest rates are projected using a stochastic interest rate model calibrated to the current market yields;
- Equity returns are assumed to follow a log-normal distribution;
- The corporate bond return is calculated based on a risk-free return plus a mean-reverting spread;
- Property returns are also modelled on a risk-free return plus a risk premium with a stochastic process reflecting total property returns; and
- The standard deviation of equities and property ranges from 14 per cent to 20 per cent (2016: from 15 per cent to 20 per cent).

Operating assumptions

(vii) Best estimate assumptions

Best estimate assumptions are used for the cash flow projections, where best estimate is defined as the mean of the distribution of future possible outcomes. The assumptions are reviewed actively and changes are made when evidence exists that material changes in future experience are reasonably certain.

Assumptions required in the calculation of the value of options and guarantees, for example relating to volatilities and correlations, or dynamic algorithms linking liabilities to assets, have been set equal to the best estimates and, wherever material and practical, reflect any dynamic relationships between the assumptions and the stochastic variables.

Demographic assumptions

Persistency, mortality and morbidity assumptions are based on an analysis of recent experience, but also reflect expected future experience. Where relevant, when calculating the time value of financial options and guarantees, policyholder withdrawal rates vary in line with the emerging investment conditions according to management's expectations.

Expense assumptions

Expense levels, including those of service companies that support the Group's long-term business operations, are based on internal expense analysis and are appropriately allocated to acquisition of new business and renewal of in-force business. Exceptional expenses are identified and reported separately. For mature business, it is Prudential's policy not to take credit for future cost reduction programmes until the actions to achieve the savings have been delivered. Expense overruns are reported where these are expected to be short-lived, including businesses that are growing rapidly or are sub-scale.

For Asia operations, the expenses comprise costs borne directly and recharged costs from the Asia Regional Head Office that are attributable to covered business. The assumed future expenses for these operations also include projections of these future recharges. Development expenses are charged as incurred.

Corporate expenditure, which is included in other income and expenditure, comprises:

- expenditure for Group Head Office, to the extent not allocated to the PAC with-profits funds, together with restructuring costs; and
- expenditure of the Asia Regional Head Office that is not allocated to the covered business or asset management operations which is charged as incurred. These costs are primarily for corporate related activities and are included

within corporate expenditure.

(viii) Tax rates

The assumed long-term effective tax rates for operations reflect the incidence of taxable profits and losses in the projected cash flows as explained in note 14(a)(x).

The local statutory corporate tax rates applicable for the most significant operations for 2016 and 2017 are as follows:

Statutory corporate tax rates %

Asia operations:

Hong Kong 16.5 per cent on 5 per cent of premium income

Indonesia25.0Malaysia24.0Singapore17.0

US operations* 2016 and 2017: 35.0; from 1 January 2018: 21.0

UK operations 2016: 20.0; from 1 April 2017: 19.0; from 1 April 2020: 17.0

Notes

- (i) The tables shown above are provided as an indicative volume measure of transactions undertaken in the reporting period that have the potential to generate profits for shareholders. The amounts shown are not, and not intended to be, reflective of premium income recorded in the IFRS income statement. A reconciliation of APE and gross earned premiums on an IFRS basis is provided in Note E within the EEV unaudited financial information.
- (ii) New business in China is included at Prudential's 50 per cent interest in the China life operation.
- (iii) New business in India is included at Prudential's 26 per cent interest in the India life operation.

17 Disposal of businesses

On 18 May 2017, the Group announced it had completed the sale of its life insurance subsidiary in Korea, PCA Life Insurance, to Mirae Asset Life Insurance for KRW 170 billion (£117 million at 17 May 2017 closing exchange rate) following regulatory approval. The proceeds, net of £(9) million of related expenses, were £108 million. Upon disposal, £76 million of required capital was released and a corresponding increase in free surplus was recognised. There were no other impacts on the 2017 results.

On 15 August 2017, the Group through its subsidiary National Planning Holdings, Inc. (NPH) sold its US independent broker-dealer network to LPL Financial LLC. The initial consideration received was £252 million (US\$ 325 million) resulting in a post-tax profit on disposal of £80 million (US\$103 million) after costs and net losses that have been incurred in the year.

18 Post balance sheet events

Intention to demerge the Group's UK businesses

In March 2018, the Group announced its intention to demerge its UK & Europe business ('M&G Prudential') from Prudential plc, resulting in two separately-listed companies. In preparation for the UK demerger process, Prudential plc intends to transfer the legal ownership of its Hong Kong insurance subsidiaries from The Prudential Assurance

Company Limited (M&G Prudential's UK regulated insurance entity) to Prudential Corporation Asia Limited, which is expected to complete by the end of 2019.

Sale of £12.0 billion* UK annuity portfolio

In March 2018, M&G Prudential also announced the sale of £12.0 billion* of its shareholder annuity portfolio to Rothesay Life. Under the terms of the agreement, M&G Prudential has reinsured £12.0 billion* of liabilities to Rothesay Life, which is expected to be followed by a Part VII transfer of the portfolio by the end of 2019. Further details are set out in the CFO Report.

* Relates to £12.0 billion of IFRS shareholder annuity liabilities, valued as at 31 December 2017.

Additional EEV financial information*

A New Business

BASIS OF PREPARATION

The format of the schedules is consistent with the distinction between insurance and investment products as applied for previous financial reporting periods. With the exception of some US institutional business, products categorised as 'insurance' refer to those classified as contracts of long-term insurance business for regulatory reporting purposes, ie falling within one of the classes of insurance specified in part II of Schedule 1 to the Regulated Activities Order under Prudential Regulation Authority regulations.

The details shown for insurance products include contributions for contracts that are classified under IFRS 4 'Insurance Contracts' as not containing significant insurance risk. These products are described as investment contracts or other financial instruments under IFRS. Contracts included in this category are primarily certain unit-linked and similar contracts written in UK and Europe Insurance Operations, and Guaranteed Investment Contracts and similar funding agreements written in US Insurance Operations.

New business premiums for regular premium products are shown on an annualised basis. Internal vesting business is classified as new business where the contracts include an open market option. New business premiums reflect those premiums attaching to covered business, including premiums for contracts designed as investment products for IFRS reporting.

Investment products referred to in the tables for funds under management are unit trusts, mutual funds and similar types of retail fund management arrangements. These are unrelated to insurance products that are classified as investment contracts under IFRS 4, as described in the preceding paragraph, although similar IFRS recognition and measurement principles apply to the acquisition costs and fees attaching to this type of business.

Post-tax New Business Profit has been determined using the European Embedded Value (EEV) methodology set out in our EEV basis results supplement.

In determining the EEV basis value of new business written in the period policies incept, premiums are included in projected cash flows on the same basis of distinguishing annual and single premium business as set out for statutory basis reporting.

Annual premium equivalent (APE) sales are subject to rounding.

* The additional financial information is not covered by the KPMG LLP independent audit opinion.

Notes to Schedules A(i) to A(v)

(1) Prudential plc reports its results using both actual exchange rates (AER) and constant exchange rates (CER) so as to eliminate the impact of exchange translation.

| | Average ra | ate* | | Closing ra | te | | | |
|--------------------|------------|-----------|---|----------------|----------------|---|--|--|
| Local currency : £ | 2017 | 2016 | % appreciation (depreciation) of local currency against GBP | 31 Dec 2017 | 31 Dec 2016 | % appreciation (depreciation) of local currency against GBP | | |
| China | 8.71 | 8.99 | 3% | 8.81 | 8.59 | (2)% | | |
| Hong Kong | 10.04 | 10.52 | 5% | 10.57 | 9.58 | (9)% | | |

| US | 1.29 | 1.35 | 5% | 1.35 | 1.24 | (8)% | | |
| Vietnam | 29,279.71 | 30,292.79 | 3% | 30,719.60 | 28,136.99 | (8)% | | |

^{*} Average rate is for the 12 month period to 31 December.

- (2) Annual Premium Equivalents (APE), calculated as regular new business contributions plus 10 per cent of single new business contributions, are subject to rounding. Present value of new business premiums (PVNBP) are calculated as equalling single premiums plus the present value of expected premiums of new regular premium business. In determining the present value, allowance is made for lapses and other assumptions applied in determining the EEV new business profit.
- (3) Balance includes segregated and pooled pension funds, private finance assets and other institutional clients.
- (4) New business in India is included at Prudential's 26 per cent interest in the India life operation.
- (5) Balance Sheet figures have been calculated at the closing exchange rates.
- (6) New business in China is included at Prudential's 50 per cent interest in the China life operation.
- (7) Mandatory Provident Fund (MPF) product sales in Hong Kong are included at Prudential's 36 per cent interest in Hong Kong MPF operation.
- (8) Investment flows for the year exclude year-to-date Eastspring Money Market Funds (MMF) gross inflow of £192,662 million (2016: gross inflow of £146,711 million) and net inflow of £1,495 million (2016: net inflow of £403 million).
- (9) Total Group Investment Operations funds under management exclude MMF funds under management of £9,317 million at 31 December 2017 (31 December 2016: £7,714 million).

B Reconciliation of expected transfer of value of in-force business and required capital to free surplus

The tables below show how the value of in-force business (VIF) generated by the in-force long-term business and the associated required capital is modelled as emerging into free surplus over the next 40 years. Although a small amount (less than 4 per cent) of the Group's embedded value emerges after this date, analysis of cash flows emerging in the years shown in the tables is considered most meaningful. The modelled cash flows use the same methodology underpinning the Group's embedded value reporting and so are subject to the same assumptions and sensitivities used to prepare our 2017 results.

In addition to showing the amounts, both discounted and undiscounted, expected to be generated from all in-force business at 31 December 2017, the tables also present the expected future free surplus to be generated from the investment made in new business during 2017 over the same 40-year period for long-term business operations.

Total free surplus expected to

emerge in the next 40 years 37,770 18,644 13,706 70,120 5,507 2,017 861 8,385

The above amounts can be reconciled to the new business amounts as follows:

| | 2017 £n | 1 | | |
|---|-----------|-------|---------------|---------|
| | Asia | US | UK and Europe | Total |
| Undiscounted expected free surplus generation for years 2018 to 2057 | | | | 8,385 |
| Less: discounted effect Discounted expected free | t (3,153) | (689) | (339) | (4,181) |
| surplus generation for years 2018 to 2057 | 2,354 | 1,328 | 522 | 4,204 |
| Discounted expected free surplus generation for years after 2057 Less: Free | 442 | - | 1 | 443 |
| surplus investment in | (484) | (254) | (175) | (913) |
| new business Other items** Post-tax EEV | 56 | (168) | (6) | (118) |
| new business profit for long-term business operations | 2,368 | 906 | 342 | 3,616 |

Other items represent the impact of the time value of options and guarantees on new business, foreign exchange ** effects and other non-modelled items. Foreign exchange effects arise as EEV new business profit amounts are translated at average exchange rates and the expected free surplus generation uses year end closing rates.

The analysis excludes amounts incorporated into VIF at 31 December 2017 where there is no definitive timeframe * for when the payments will be made or receipts received. In particular, it excludes the value of the shareholders' interest in the with-profits estate. It also excludes any free surplus emerging after 2057.

The undiscounted expected free surplus generation from all in-force business at 31 December 2017 shown below can be reconciled to the amount that was expected to be generated as at 31 December 2016 as follows:

| £m £ |
|--|
| generation 3,441 3,195 3,111 3,070 3,030 2,865 45,321 64,033 for years 2017 to 2056 Less: Amounts expected to be realised (3,441) (3,441) |

^{*} Excluding 2017 new business.

At 31 December 2017, the total free surplus expected to be generated over the next five years (2018 to 2022 inclusive), using the same assumptions and methodology as those underpinning our 2017 embedded value reporting was £17.2 billion, an increase of £1.4 billion from the £15.8 billion expected over an equivalent period from the end of 2016.

This increase primarily reflects the new business written in 2017, which is expected to generate £1,838 million of free surplus over the next five years.

At 31 December 2017, the total free surplus expected to be generated on an undiscounted basis in the next 40 years is £70.1 billion, up from the £64.0 billion expected at the end of 2016, reflecting the effect of new business written across all three business operations of £8.4 billion, a negative foreign exchange translation effect of £(3.1) billion and a £3.7 billion net effect reflecting operating, market assumption changes and other items. In Asia, these include the effect of changes in operating assumptions reflecting the net benefit arising from annual review of experience, together with the benefit of management actions. In the US, these mainly reflect the positive effect from persistency assumption updates and increase in equity market returns, together with the benefits from US tax reform, partially offset by lower future separate account return due to the decrease in interest rates. In the UK and Europe, these reflect the impact of management actions which had the effect of accelerating the generation of future free surplus into 2017, partially offset by higher than assumed investment returns on with-profits funds. The overall growth in the Group's undiscounted value of free surplus reflects our ability to write both growing and profitable new business.

Actual underlying free surplus generated in 2017 from life business in force before restructuring costs at the end of 2017 was £4.1 billion including £0.6 billion of changes in operating assumptions and experience variances. This compares with the expected 2017 realisation at the end of 2016 of £3.4 billion. This can be analysed further as follows:

| | Asia £m | US £m | UK and Europe £m | Total £m |
|--|------------|----------|------------------------|-------------|
| Transfer to free surplus in 2017 | 1,275 | 1,329 | 675 | 3,279 |
| Expected return on free assets | 51 | 56 | 31 | 138 |
| Changes in operating assumptions and experience variances | 81 | 190 | 364 | 635 |
| Underlying free surplus generated from in-force life business before restructuring costs in 2017 | 1,407 | 1,575 | 1,070 | 4,052 |
| 2017 free surplus expected to be generated at 31 December 2016 | 1,320 | 1,446 | 675 | 3,441 |

The equivalent discounted amounts of the undiscounted expected transfers from in-force business and required capital into free surplus shown previously are as follows:

| 31 Dec | 2017 £m | ı | | | | | | |

| Other Asia currencies | 17% | 18% | 16% | |
| Total Asia | 30% | 42% | 37% | |
| UK sterlingnotes (2)(3) | 34% | 11% | 50% | |
| US dollarnote (3) | 36% | 47% | 13% | |
| Total | 100% | 100% | 100% | |

2017 Group EEV post-tax results

| | New business profits Operating profit | | Shareholders' funds | |
|--------------------------|---------------------------------------|--------------|---------------------|--|
| | % | % | % | |
| | | notes (2)(3) | notes (2)(3) | |
| US dollar linkednote (1) | 54% | 46% | 37% | |
| Other Asia currencies | 12% | 12% | 11% | |
| Total Asia | 66% | 58% | 48% | |
| UK sterlingnotes (2)(3) | 9% | 9% | 29% | |
| US dollarnote (3) | 25% | 33% | 23% | |
| Total | 100% | 100% | 100% | |

Notes

- (1) US dollar linked comprise the Hong Kong and Vietnam operations where the currencies are pegged to the US dollar and the Malaysia and Singapore operations where the currencies are managed against a basket of currencies including the US dollar.
- (2) For operating profit and shareholders' funds, UK sterling includes amounts in respect of M&G Prudential and other operations (including central operations, Africa operations and Prudential Capital). Operating profit for central operations includes amounts for corporate expenditure for Group Head Office as well as Asia Regional Head Office which is incurred in HK dollars.
- (3) For shareholders' funds, the US dollar grouping includes US dollar denominated core structural borrowings. Sterling operating profits include all interest payable as sterling denominated, reflecting interest rate currency swaps in place.

D Reconciliation between IFRS and EEV shareholders' funds

The table below shows the reconciliation of EEV shareholders' funds and IFRS shareholders' funds at the end of the year:

| | 31 Dec 2017 £m | 31 Dec 2016 £m |
|--|----------------|----------------|
| EEV shareholders' funds | 44,698 | 38,968 |
| Less: Value of in-force business of long-term businessnote (a) | (29,410) | (24,937) |

| Deferred acquisition costs assigned zero value for EEV purposes | 9,227 | 9,170 |
|---|---------|---------|
| Othernote (b) | (8,428) | (8,535) |
| IFRS shareholders' funds | 16,087 | 14,666 |

Notes

- (a) The EEV shareholders' funds comprises the present value of the shareholders' interest in the value of in-force business, net worth of long-term business operations and IFRS shareholders' funds of asset management and other operations. The value of in-force business reflects the present value of future shareholder cash flows from long-term in-force business which are not captured as shareholders' interest on an IFRS basis. Net worth represents the net assets for EEV reporting purposes that reflect the regulatory basis position, sometimes with adjustments to achieve consistency with the IFRS treatment of certain items.
- (b) Other adjustments represent asset and liability valuation differences between IFRS and the local regulatory reporting basis used to value net worth for long-term insurance operations. For the UK, this would be the difference between IFRS and Solvency II.

It also includes the mark to market of the Group's core structural borrowings which are fair valued under EEV but not IFRS. The most significant valuation differences relate to changes in the valuation of insurance liabilities. For example, in Jackson where IFRS liabilities are higher than the local regulatory basis as they are principally based on policyholder account balances (with a deferred acquisition costs recognised as an asset) whereas the local regulatory basis used for EEV is based on future cash flows due to the policyholder on a prudent basis with consideration of an expense allowance as applicable, but with no separate deferred acquisition cost asset.

E Reconciliation of APE new business sales to earned premiums

The Group reports APE new business sales as a measure of the new policies sold in the year. This differs from the IFRS measure of premiums earned as shown below:

| | 2017 £m | 2016 £m |
|--|---------|---------|
| Annual premium equivalents as published | 6,958 | 6,320 |
| Adjustment to include 100% of single premiums on new business sold in the yearnote (a) | 28,769 | 25,057 |
| Premiums from in-force business and other adjustmentsnote (b) | 8,278 | 7,604 |
| Gross premiums earned | 44,005 | 38,981 |
| Outward reinsurance premiums | (2,062) | (2,020) |
| Earned premiums, net of reinsurance as shown in the IFRS financial statements | 41,943 | 36,961 |

Notes

- (a) APE new business sales only include one tenth of single premiums, recorded on policies sold in the year. Gross premiums earned include 100 per cent of such premiums.
- (b) Other adjustments principally include amounts in respect of the following:
- Gross premiums earned include premiums from existing in-force business as well as new business. The most significant amount is recorded in Asia, where a significant portion of regular premium business is written. Asia in-force premiums form the vast majority of the other adjustment amount;
- APE includes new policies written in the year which are classified as investment contracts without discretionary participation features under IFRS 4, arising mainly in Jackson for guaranteed investment contracts and in M&G Prudential for certain unit-linked savings and similar contracts. These are excluded from gross premiums earned and recorded as deposits;
- APE new business sales are annualised while gross premiums earned are recorded only when revenues are due; and
- For the purpose of reporting APE new business sales, we include the Group's share of amounts sold by the Group's insurance joint ventures and associates. Under IFRS, joint ventures and associates are equity accounted and so no

amounts are included within gross premiums earned.

F Calculation of return on embedded value

Return on embedded value is calculated as the EEV post-tax operating profit based on longer-term investment returns, as a percentage of opening EEV basis shareholders' funds.

| | Note | 2017 | 2016 |
|--|------|--------|--------|
| Operating profit based on longer-term investment returns (£ million) | 2 | 6,598 | 5,497 |
| Opening EEV basis shareholders' funds (£ million) | 9 | 38,968 | 31,886 |
| Return on embedded value | | 17% | 17% |

G Calculation of EEV shareholders' funds per share

EEV shareholders' funds per share is calculated as closing EEV shareholders' funds divided by the number of issued shares at the balance sheet date. EEV shareholders' funds per share excluding goodwill attributable to shareholders is calculated in the same manner, except goodwill attributable to shareholders is deducted from closing EEV shareholders' funds.

| | Note | 31 Dec 2017 | 31 Dec 2016 | |
|---|------|-------------|-------------|--|
| Closing EEV shareholders' funds (£ million) | 9 | 44,698 | 38,968 | |
| Less: Goodwill attributable to shareholders (£ million) | 9 | (1,458) | (1,475) | |
| Closing EEV shareholders' funds excluding goodwill attributable to shareholders (£ million) | | 43,240 | 37,493 | |
| Number of issued shares at year end (millions) | | 2,587 | 2,581 | |
| Shareholders' funds per share (in pence) | | 1,728p | 1,510p | |
| Shareholders' funds per share excluding goodwill attributable to shareholders (in pence) | | 1,671p | 1,453p | |
