#### NOTE REGARDING FORWARD-LOOKING STATEMENTS

Some information in this report may contain forward-looking statements within the meaning of Section 27A of the U.S. Securities Act of 1933 and Section 21E of the U.S. Securities Exchange Act of 1934. We have based these forward-looking statements on our current beliefs, expectations and intentions as to facts, actions and events that will or may occur in the future. Such statements generally are identified by forward-looking words such as believe, plan, anticipate, continue, estimate, expect, may, will or other similar words.

A forward-looking statement may include a statement of the assumptions or bases underlying the forward-looking statement. We have chosen these assumptions or bases in good faith. These forward-looking statements are subject to risks, uncertainties and assumptions, some of which are beyond our control. In addition, these forward-looking statements reflect our current views with respect to future events and are not a guarantee of future performance. Actual results may differ materially from information contained in the forward-looking statements as a result of a number of factors, including, without limitation, the risk factors set forth in Item 3. Key Information Risk Factors in our annual report on Form 20-F for the fiscal year ended December 31, 2009. You should also keep in mind that any forward-looking statement made by us in this report or elsewhere speaks only as at the date on which we made it. New risks and uncertainties come up from time to time, and it is impossible for us to predict these events or how they may affect us. We have no duty to, and do not intend to, update or revise the statements in this report after the date hereof. In light of these risks and uncertainties, you should keep in mind that actual results may differ materially from any forward-looking statement made in this report or elsewhere.

***SMART***

**FOR IMMEDIATE RELEASE**

**Call it Enterprise, Call it Fusion**

*SMART Enterprise leads explosive Philippine business growth in the  
new wireless frontier*

The latest chapter in the mobile phone's evolution is its realization as a viable business platform. And herein lies the next frontier of synergies and innovation. As SMART puts it, it's the other side of the moon, promising a great business fusion or an explosive growth in the enterprise market.

This fusion refers to the launch of a new suite of next generation machine-to-machine (M2M) communications services under the re-launched business unit named SMART Enterprise, (from SMART Business Solutions). This unit has been around for some time, although not as well known, especially alongside its consumer unit handy phones and SMART Bro Internet despite its own significant contributions. Four key solutions, the first wave of many, were introduced: SMART Metering, Tollway Pass, a mobile phone application for merchandisers, and wireless logistics solutions.

The Next Generation

Four key technological developments have come into play to the benefit of SMART's customers: the explosion of network bandwidth; the multiplicity of platforms, content, services and applications; the introduction of game-changing, net-enabled devices such as smartphones and tablets; and finally, the emergence of cloud-computing. These very same factors are combining to make businesses more fertile ground for next-generation Enterprise

services, says SMART Chief Wireless Advisor Orlando B. Vea. The timing could not have been more perfect; in fact, to promptly act on these technological developments, was an exercise of responsibility.

According to Mr. Vea, the fusion of these factors results in an explosive growth in the efficiency of services, as well as profitability or what he calls next-generation revenues ; a win-win situation for businesses and consumers. He highlights how SMART's network has promoted wireless medical technologies that greatly aid both physicians and patients, emphasizing the innate impact on the social and economic well-being of people while delivering better, next-generation services.

With the introduction of the SMART Enterprise brand, we are reaffirming our commitment to shift from a mere traditional product-centric TelCo provider, into hopefully a customer-focused ICT (Information and Communications Technology) solutions

Exhibit 1

partner to all our enterprise relationships, says PLDT SVP for Customer Sales and Marketing Group and Head of SMART Enterprise Eric Alberto. Rechristening the brand SMART Enterprise, in his words, is described as simple, yet encompassing in its character, a brand that reflects how converged ICT solutions can unlock new and exciting opportunities, and create breakthroughs in business. Mr. Alberto is credited for fostering the transition of the PLDT Corporate Business Group from being mere vendors towards building lasting relationships with clients. This is crucial in creating bespoke solutions for each specialized business need. SMART Enterprise builds on emerging Peer-to-Peer (P2P), Peer-to-Machine (P2M), and M2M technologies for these solutions: utility meter management, mobile-connected smart buildings, tollway management, consumer and commercial telemetry, remote healthcare monitoring, and expanded e-banking collection. Mr. Alberto further explained that these are made possible through partnerships with domain experts.

Dawn of the Wireless World

Jovy Hernandez, Head of PLDT Corporate Business Group and SMART Enterprise Sales & Marketing, gave detailed overviews of the new solutions. He first reflected on the world-renowned love affair Filipinos have with their mobile phones, adding that some people say that opportunity doesn't knock it merely texts before expounding on how this intimate relationship has evolved over the years, from plain texting and calling to mobile Internet and now mobile applications through smartphones, pointing out that today's consumer is more sophisticated. Corporate enterprise catalyzed further evolution with a growing demand for more business functionality, leading to a slew of new services, including M2M solutions now ready to be rolled out, with many more in development phase.

The first of these is SMART Metering digital utility meters equipped with modems that transmit information through wireless data services a solution made for and in collaboration with Meralco. Among its benefits includes saving on the risk and costs involved in deploying human agents to read meters, perform maintenance, disconnect and activate power. Remotely gathering readings in real time makes for more accurate reporting, quicker and more efficient response and naturally, less cost than deploying personnel and equipment in remote territories.

The second is Tollway Pass for the North Luzon Expressway (NLEX), developed for the Manila North Tollways Corporation (MNTC) which uses an RFID system and SMART Money payment accounts. Aimed primarily at enterprise customers with fleet operations, owners can now monitor and manage their fleet, and wirelessly send toll payments instead of cash. Trucks and other vehicles pass through what SMART Enterprise envisions to soon become barrier-less tollgates, making for much faster and smoother rides.

Exhibit 1

For the merchandising sector, a service for mobile phones to collect and transmit data between several outlets and head offices is in the works. The old method entailed information being slowly collected and sent manually through paper and pen. Merchandisers can take advantage of quicker inventory management and more effective

marketing and promotions made possible by this application, which can be run on even the most basic of phones. On the logistics side, an M2M application, using a special device tracks and monitors packages moving from delivery and receipt points. Once again it uses wireless technology, with minimal to no further human effort required to facilitate information transfer.

Just Around the Corner

These pioneering wireless applications are poised to offer even more revolutionary solutions. Wireless solutions already make an impact in existing services such as medical transcription, mobile laboratories, remote prosthetic profiling, even the 2010 elections PICOS machines, all key interests of PLDT and SMART. Clearly, government, like business, also stands to gain much from a genuine openness to this modernization, this wonder of technology, as Mr. Alberto opined.

One of the attendees at the launch, a senior member of the press, commented that SMART is unique in pursuing this direction expanding and generating solid contributions to development and infrastructure severely lacking in the country. That means they're working, they're trying hard and that's good, as far as the people are concerned. Something is going on, he says. Indeed, such new frontier developments, and the renewed spirit of SMART are a radical departure from the product-oriented consumer game. They illustrate the drive to build a better country, a better tomorrow. Mr. Hernandez quotes legendary management guru Peter Drucker, summing up the venture and the mission defining SMART Enterprise: The best way to predict the future is to create it.
