Sleuth© Software Developed With Magic Software s eDeveloper Now Deployed In U.S. In Over 450 Safety Agencies To Improve Public Security

Latest Win For Sleuth Is State Of Colorado With Public Safety Management Solution For Department of Corrections

IRVINE, CA (June 16, 2004) Magic Software Enterprises (NASDAQ: MGIC), a leading provider of state-of-the-art development technology and business solutions, announced today that Magic Solution Partner, Access Data Corporation (ADC) of Angel Fire, New Mexico, has successfully deployed and integrated Sleuth©, a comprehensive public safety records management solution for the State of Colorado, Department of Corrections. Sleuth was developed using Magic Software s eDeveloper application development and deployment environment.

"We selected Access Data because its Sleuth solution provides an easy to use comprehensive environment that fulfills our ongoing needs, said Brandon Davis, Crime Analyst with the State of Colorado s Department of Corrections. In addition, its underlying technology, eDeveloper, enabled us to quickly and easily consolidate our existing systems.

The State of Colorado Department of Corrections will be using Sleuth in all 23 state adult prisons. ADC integrates law enforcement and first responders—solutions for more than 450 small to medium-sized public safety agencies located throughout the United States. Sleuth features applications for law enforcement agencies, court systems and rescue groups, as well as jails and other detention facilities.

By adding the Colorado Department of Corrections to our client list, we are again demonstrating the ability of Magic Software s core technology to rapidly develop applications and enable integration with existing systems, said David Vosburgh, chief architect of the Sleuth Software system and president of ADC.

"In the United States today, there is a critical need to improve data integration capabilities throughout law enforcement agencies. To perform most effectively, appropriate law enforcement agency personnel must have real-time access to the key items of information needed to protect the public, said Oren Inbar, CEO of Magic Software s North American subsidiary. "We are excited to work with Access Data to fulfill the needs of our nation s public safety agencies in addition to the work our partners are doing to use eDeveloper to develop law enforcement solutions globally.

Most recently, ADC has signed Sleuth deals with:

The State of Nebraska to provide 100 of its agencies the ability to manage incident and arrest information, and integrate it directly into the FBI's national incident databank;

The State of New Mexico to computerize five juvenile detention centers;

Durango, Col. to install and integrate Sleuth into the Durango Police Department, Durango Municipal Court, La Platta County Sheriff's Office and Durango Jail;

Several college police departments, including Kansas State University and Grinnell College to modify Sleuth to fit their individual security needs; and

The Iowa Department of Transportation to use Sleuth to automate the transfer of traffic crash reports from officers' laptops directly into a central database. The information will be used for insurance company reports, statistical reporting, and name traces during investigations.

In addition, ADC was recently selected as one of four vendors certified to provide court software solutions within the State of New Mexico.

The Sleuth solution includes a dispatch system to handle emergency calls; a police records management system to manage incident reporting and store investigative data; a jail intake system that allows arrests to be computerized; a criminal tracking system that enables agencies to track criminals throughout their entire periods of incarceration; as well as many additional features. The information is completely integrated and can be accessed by police officers, judges, probation officers, attorneys and any other individuals authorized and involved in the criminal process.

In addition, ADC has installed software directly into police cars to provide officers immediate access to data and the ability to enter reports directly online. And ADC continues to incorporate new features into Sleuth, including capabilities to allow anyone in the system to access statistics and court case status from any Web-enabled computer.

About Access Data Corporation

Access Data Corporation provides comprehensive, totally integrated database management solutions for law enforcement, communications, corrections/detentions and emergency service providers throughout the United States. In business for more than 17 years, the Company has installed its solutions at more than 450 locations. Its Sleuth© solution, which includes integrated file management, on-screen digital camera button controls, mapping capabilities and product interfaces, as well as many other features, is one of the most respected database management applications available to small- to medium-sized public safety agencies.
